The Evolutionary Pathway To The Gods:

The Future of Life: Meta-Evolution David Hunter Tow, 2006-10 The Future of Life Meta Evolution represents the first comprehensive formulation of the hypothesis that evolution is the unifying force underlying the dynamics of all processes in the universe both organic and inorganic These include all facets of human existence and civilisation the sciences technology arts humanities and religion In essence by applying quantum information network and decision theory it is demonstrated that an overarching evolutionary process shapes the spectrum of life and phenomena in the universe as a generic paradigm beyond Darwin s original biology based theory The Theory of Evolution is undoubtedly the most powerful paradigm ever conceived by humans to explain their own existence Since Darwin s epoch making treatise *Origin of Species* published in 1859 evolution has been centre stage universally recognised as the driving force in the emergence of modern humans from the genesis of life on this planet almost 4 billion years ago However despite its ubiquitous brilliance as the jewel in the crown of human intellectual achievement the notion of evolution has never been developed to its full potential It remains instead constrained within its biological cradle often reduced in everyday connotation to its lowest common denominator of survival of the fittest The intention of this book to re evaluate and expand the Darwinian model of evolution to demonstrate that its current application is only the tip of the intellectual iceberg and that by combining its formidable biological principles with those of decision complexity network quantum and information theory it emerges as an incalculably deeper and richer model than previously contemplated It will be demonstrated that the evolutionary engine which drives biological development also drives all other dynamic adaptive processes the physical social cognitive economic political and technological and is in fact the major dynamic governing the Universe past present and future It is further proposed to demonstrate that recent developments in artificial intelligence and ubiquitous computing through the Internet mark the next crucial stage in life s evolution involving the inevitable symbiosis of vast computational intelligence with the human mind The major hypothesis developed in this book of a global all encompassing Theory of Evolution coupled with its potential for realising the emancipation of human intelligence and potential provides a vastly more powerful paradigm for exploring the Future of Life than current scientific scenarios The resulting Omega state of infinite knowledge and wisdom which is proposed has been actively championed by a number of eminent 19th and 20th century philosophers such as Teilhard de Chardin Henri Bergson Schelling Alfred Whitehead Samuel Alexander and more recently by the leading physicist and futurist Professor Frank Tipler However to date no equivalent scientific framework for supporting such a hypothesis has been provided In conclusion The Future of Life Meta Evolution has been written not as an academic text but as primarily a non technical review of the evidence to support such a hypothesis in much the same vein as other recent publications in the popular science philosophy genre It is hoped that this approach will therefore provide a window into the wider evolutionary debate for the general reader interested in one of the most critical emerging paradigm shifts of the 21st century **The Holy Geeta Swami**

Chinmayananda,1996 The Holy Geeta or the Song Celestial is a dialogue between the Lord and a man of action set amidst the din and roar of war The good and evil forces within are represented in the battlefield of life Man often finds himself in a crisis wherein he is psychologically unable to cope with the situation at hand or even decide the right course of action In this inner turmoil there is a great battle between the positive and negative inclinations The Holy Geeta portrays this great spiritual struggle within man and guides him towards his inherent divinity and positivity In doing so this Celestial Song explains the nature of man his purpose in the world and the means for him to attain his goals In short it is a complete manual for achieving success in life The Holy Geeta is the heart of the great Hindu epic the Mahabharata It is the quintessence of the philosophy of Vedanta This commentary on the Holy Geeta by Swami Chinmayananda is one of the finest ever written His extremely logical explanations in contemporary and powerful language have appealed to millions of people around the world

The Mystery of Evolutionary Mechanisms Robert F. Sheldrake, 2019-06-28 Is Darwinian evolution really the most successful scientific theory ever proposed or even the best idea anyone has ever had as Daniel Dennett once put it The Mystery of Evolutionary Mechanisms provides a comprehensive critical reading of the literature of evolutionary biology from Darwin to Dobzhansky to Dawkins revealing this popular account of evolution to be a grand narrative of Darwinian triumph that greatly overstates the empirical validity of modern evolutionary theory The mechanisms driving the evolutionary process truly remain a mystery more than one hundred fifty years after Origin of Species a fact that can free religion scholars to think in more creative ways about the positive contributions religious reflection might make to our understanding of life's origin and diversity The Mystery of Evolutionary Mechanisms calls for an embrace of mystery understood not as an abdication of the scientific quest for truth but as a courageous and humble acknowledgment of the limits of human reason and an openness to a fundamentally religious orientation toward life

On the Road of the Winds Patrick Vinton Kirch, 2000-05-24 The Pacific Ocean covers one third of the earth's surface and encompasses many thousands of islands the home to numerous human societies and cultures Among these indigenous Oceanic cultures are the intrepid Polynesian double hulled canoe navigators the atoll dwellers of Micronesia the statue carvers of remote Easter Island and the famed traders of Melanesia Recent archaeological excavations combined with allied research in historical linguistics biological anthropology and comparative ethnography have begun to reveal much new information about the long term history of these Pacific Island societies and cultures On the Road of the

Winds synthesizes the grand sweep of human history in the Pacific Islands beginning with the movement of early people out from Asia more than 40 000 years ago and tracing the development of myriad indigenous cultures up to the time of European contact in the sixteenth to eighteenth centuries Questions that scholars have posed and puzzled over for two centuries or more are illuminated here Where did the Pacific Islanders come from How did they discover and settle the thousands of islands Why did they build great monuments like Nan Madol on Pohnpei Island in Micronesia or the famous Easter Island statues This book provides an up to date synthesis of archaeological and historical anthropological knowledge of these fascinating indigenous cultures In particular Kirch focuses on human ecology and island adaptations the complexities of island trading and exchange systems voyaging technology and skills and the development of intensive economic systems linked to the growth of large populations He also draws on his own original field research conducted on many islands ranging from the Solomons to Hawai i as he takes us on an intellectual voyage into the Oceanic past

Evolution and the Human-Animal Drive to Conflict Jorge A. Colombo, 2023-07-31 *Evolution and the Human Animal Drive to Conflict* examines how fundamental universal animal drives such as dominance prevalence survival kinship and profit greed advantage whether of material or social nature provide the basis for the evolutionary trap that promotes the unstable conflictive dominant prone individual and group human behaviours Examining this behavioural tension this book argues that while these innate features set up behaviours that lean towards aggression influenced by social inequalities the means implemented to defuse them resort to emotional and intellectual strategies that sponsor fanaticism and often reproduce the very same behaviours they intend to defuse In addressing these concerns the book argues that we should enhance our resources to promote solidarity accept cultural differences deter expansionist and uncontrolled profit drives and achieve collective access towards knowledge and progress in living conditions This entails promoting the redistribution of resources and creative labour access and avoiding policies that generate a fragmented world with collective and individual development disparities that invite and encourage dominance behaviours This resource redistribution asserts that it is necessary to reformulate the global set of human priorities towards increased access to better living conditions cognitive enhancement a more amiable interaction with the ecosystem and non aggressive cultural differences promote universal access to knowledge and enhance creativity and cultural convivence These behavioural changes entail partial derangement of our ancestral animal drives camouflaged under different cultural profiles until the species succeeds in replacing the dominance of basic animal drives with prosocial collective ones Though it entails a formidable task of confronting financial military and religious powers and cultural inertias human history is also a challenging continuous experience in these domains for the sake of our own self identity and self evaluation we should reject any suggestion of not continuing embracing slowly constructing collective utopias channelled towards improving individual and collective freedom and creativeness This book will interest academics and students in social cognitive and evolutionary psychology the neurosciences palaeoanthropology philosophy and anthropology

Theology and Science on the Evolution of Religion Tom Uytterhoeven, 2024-09-14 This book studies the much debated implications of sociobiology for religion It explores the answers to questions such as Is religion merely the result of natural selection Do religious ideas literally make up people s minds determining how they think and act Critically engaging philosopher Daniel Dennett s view on cultural evolution the book argues that the relation between religious concepts and religious believers is one of continuous creative dialogue This dialogical relation allows meaning to emerge and leaves room for free will thus contradicting Dennett s position The book provides a concise introduction to the questions at play where religion and science meet Drawing on sources from science philosophy and theology it offers an example of how a constructive interaction of different disciplines can lead to new perspectives on the complex phenomenon of religion

Is There a God? Graham Oppy, Kenneth L. Pearce, 2021-10-12 Bertrand Russell famously quipped that he didn t believe in God for the same reason that he didn t believe in a teapot in orbit between the earth and Mars it is a bizarre assertion for which no evidence can be provided Is belief in God really like belief in Russell s teapot Kenneth L Pearce argues that God is no teapot God is a real answer to the deepest question of all why is there something rather than nothing Graham Oppy argues that we should believe that there are none but natural causal entities with none but natural causal properties and hence should believe that there are no gods Beginning from this basic disagreement the authors proceed to discuss and debate a wide range of philosophical questions including questions about explanation necessity rationality religious experience mathematical objects the foundations of ethics and the methodology of philosophy Each author first presents his own side and then they interact through two rounds of objections and replies Pedagogical features include standard form arguments section summaries bolded key terms and principles a glossary and annotated reading lists In the volume foreword Helen De Cruz calls the debate both edifying and a joy and sums up what s at stake Here you have two carefully formulated positive proposals for worldviews that explain all that is classical theism or naturalistic atheism You can follow along with the authors and deliberate which one do you find more plausible Though written with beginning students in mind this debate will be of interest to philosophers at all levels and to anyone who values careful rational thought about the nature of reality and our place in it
