The Falcons Nest:

Falcons Nest on Skyscrapers Priscilla Belz Jenkins, 1996-01-01 Describes peregrine falcons and the efforts to increase their numbers and shares the story of a female who made her home on the ledge of a Baltimore office building The Falcon's Nest Bowling Green State University. Falcon's Nest, 1943 *Falcons Nest on Skyscrapers* Priscilla Belz Jenkins, 1996-05-16 Not only can falcons dive at 200 miles per hour and build nests atop skyscrapers but the peregrine falcon has fought its way back from near extinction in parts of the United States With a ban on DDT and the help of dedicated ornithologists the peregrine has made a phenomenal comeback This book tells the inspiring story of Scarlett a peregrine falcon who lived on a Baltimore skyscraper It also includes a list of the best places to falcon watch **The Falcon's Nest** Mark Atwell, 1999-09-01 *The Falcon's Nest* A. Lloyd, 1978 The Swiss Family Robinson Johann David Wyss, 2006 Shipwrecked on a tropical island a Swiss minister his wife and their four sons struggle to survive until they can be rescued From the Falcon's Nest, 2015 Bulletin, 1937 Endangered Species Bulletin, 1995 *Juneau Access Improvements*, 1997 **The Prairie Falcon** Stanley H. Anderson, John R. Squires, 2014-10-03 Skillful hunters beautiful in flight Prairie Falcons inhabit the rocky cliffs of the American West These raptors range from southern Canada and northern North Dakota to Baja California Arizona New Mexico western and northern Texas and southeastern Coahuila Mexico This is the first book for a wide audience devoted exclusively to the Prairie Falcon Stanley Anderson and John Squires cover all aspects of the falcon's life history from mating and rearing young to hunting behaviors and the yearly migration cycle They provide complete descriptive characteristics for identifying Prairie Falcons and also compare them to other raptors especially the closely related Peregrine Falcon In addition the authors recount the long association of falcons with people which may extend back as far as 2000 BC They describe the practice of falconry from the Middle Ages until today And they assess the threats to Prairie Falcons posed by human activities from pesticide use and destruction of habitat to disruption of the breeding cycle by careless birdwatchers **Grand Junction Resource Management Plan** United States. Bureau of Land Management. Grand Junction District, 1987 **Grand Junction Resource Area Resource(s) Management Plan (RMP)**, 1985 Biology of the Peregrine and Gyrfalcon in Greenland William A. Burnham, William G. Mattox, 1984 A ten year study began in 1972 in West Greenland to investigate the breeding biology of the peregrine falcon Data on nesting gyrfalcons were also collected Thirty four peregrine nesting sites were examined in the 6050 km² inland study area near Søndre Strømfjord Limited research also centered in Disko Bugt and Frederikshavn Peregrines were found nesting predominantly on high south facing cliffs which overlooked large areas The mean minimum distance between peregrine eyries was 7.7 km for the inland area 1972 and 1973 and 55 km for the coast 1974 Approximately 60 percent of the inland nesting sites were occupied each year A ten year average production of 1.90 young per occupied site and 2.78 young per successful site was determined Lapland longspurs snow buntings wheatears and redpolls comprised 90 percent of the peregrines diet Raven nests and prey

availability may be the most significant factor affecting falcon density. Addled peregrine eggs, eggshell fragments and peregrine prey species were collected. Whole eggs averaged 14.3 ppm wet weight, 305 ppm lipid weight DDE, while eggshell measurements showed a 16 percent thinning compared with pre 1940 eggs from Greenland. Prey species carried low levels of DDE. The peregrine population appears to be at a near critical contamination level and a small increase in DDE level could contribute to a population decline. No indication of a decline has been observed during the study and the population appears stable. The project banded 185 peregrines from which 8 recoveries occurred. The recoveries suggest peregrines migrate south to winter in South America.

Eleonora's Falcon Harmut Walter, 1979-05
Named after a Sardinian princess of the fourteenth century who established laws protecting falcons, Eleonora's falcon is the only European bird to breed in autumn and feed its brood on the mass of birds that migrate from Europe to Africa between July and October. It breeds on small Mediterranean islands in colonies of up to 200 pairs and hunts often in groups preying on more than 90 species of migrant birds. During the winter this falcon visits the rain-soaked woodlands of Madagascar. In this study, illustrated beautifully and extensively with 59 line drawings and 38 photographs, Harmut Walter shows how the unique geographical and biological situation of *Falco eleonora* makes the species' health an important indicator of environmental decay. For though it lives in relatively isolated areas, Eleonora's falcon nevertheless may ingest the many pollutants contained in its diet of birds migrating from industrial Europe. Walter, who has studied raptors on several continents and has been an ornithologist since his early youth, examines several discrete colonies of Eleonora's falcon. He concentrates on the species' intraspecific behavior and ecology such as the falcon's aggressive actions, hunting strategies, and response to fluctuating environmental conditions and investigates their evolutionary past.
