The Hand In The Mirror:

The Hand, an Organ of the Mind Zdravko Radman, 2013-05-10 Theoretical and empirical accounts of the interconnectedness between the manual and the mental suggest that the hand can be understood as a cognitive instrument Cartesian inspired dualism enforces a theoretical distinction between the motor and the cognitive and locates the mental exclusively in the head This collection focusing on the hand challenges this dichotomy offering theoretical and empirical perspectives on the interconnectedness and interdependence of the manual and mental The contributors explore the possibility that the hand far from being the merely mechanical executor of preconceived mental plans possesses its own know how enabling enhanced beings to navigate the natural social and cultural world without engaging propositional thought consciousness and deliberation The contributors consider not only broad philosophical questions ranging from the nature of embodiment enaction and the extended mind to the phenomenology of agency but also such specific issues as touching grasping gesturing sociality and simulation They show that the capacities of the hand include perception on its own and in association with other modalities action extended cognition social interaction and communication Taken together their accounts offer a handbook of cutting edge research exploring the ways that the manual shapes and reshapes the mental and creates conditions for embodied agents to act in the world Contributors Matteo Baccarini Andrew J Bremner Massimiliano L Cappuccio Andy Clark Jonathan Cole Dorothy Cowie Natalie Depraz Rosalyn Driscoll Harry Farmer Shaun Gallagher Nicholas P Holmes Daniel D Hutto Angelo Maravita Filip Mattens Richard Menary Jesse J Prinz Zdravko Radman Matthew Ratcliffe Etienne B Roesch Stephen V Shepherd Susan A J Stuart Manos Tsakiris Michael Wheeler

The Hand and the Brain Göran Lundborg, 2013-09-11 This book presents the human hand from an overall perspective from the first appearance of hand like structures in the fins of big fishes living millions of years ago to today's and the future's mind controlled artificial hands Much focus is given to the extremely well developed sensation of the hand its importance and its linkage to brain plasticity mechanisms How can active hands rapidly expand their representational area in the brain How can the sense of touch substitute for other deficient senses such as in Braille reading where hand sensation substitutes

for missing vision How can the mere observation of active hands belonging to others activate the hand area in the observer's own brain and what is the importance of this phenomenon for learning by imitation and the understanding of other people's actions gestures and body language Why are some of us left handed and what are the consequences from cultural and physiological viewpoints Why does phantom sensation and phantom pain occur after hand amputation and what can we do about it Why can salamanders regenerate new extremities while humans can not Is it possible to transplant a hand from a diseased individual to an amputee Can artificial robotic hands be controlled by our mind and can they ever gain the role of a normal hand What role did the hand and the brain play during evolution in tool construction and development of language and cognitive functions The hand has a high symbolic value in religion literature and art and our hands have a key role in gestures and body language The Hand and the Brain is aimed at anybody with interest in life sciences in the medical field especially hand surgeons orthopaedic specialists neurologists and general practitioners and those working in rehabilitation medicine and pain treatment The original Swedish version of The Hand and the Brain has also become very popular among physiotherapists occupational therapists psychologists and among a general population with an interest in science
