Statistical Analysis Of Measurement Errors:

Statistical Analysis of Measurement Errors John L. Jaech, 1985-09-03 In this book the author has developed a general model of statistical inference based on maximum likelihood for experimental situations in which a multiple number of items are each measured by several different measurement methods *Statistical Analysis with Measurement Error Or Misclassification* Grace Y. Yi, 2017 **Statistical Analysis of Measurement Error Models and Applications** Philip J. Brown, Wayne A. Fuller, American Mathematical Society, 1990 Measurement error models describe functional relationships among variables observed subject to random errors of measurement This book treats general aspects of the measurement problem and features a discussion of the history of measurement error models **Statistical Analysis with Measurement Error or Misclassification** Grace Y. Yi, 2017-08-02 This monograph on measurement error and misclassification covers a broad range of problems and emphasizes unique features in modeling and analyzing problems arising from medical research and epidemiological studies Many measurement error and misclassification problems have been addressed in various fields over the years as well as with a wide spectrum of data including event history data such as survival data and recurrent event data correlated data such as longitudinal data and clustered data multi state event data and data arising from case control studies *Statistical Analysis with Measurement Error or Misclassification Strategy Method and Application* brings together assorted methods in a single text and provides an update of recent developments for a variety of settings Measurement error effects and strategies of handling mismeasurement for different models are closely examined in combination with applications to specific problems Readers with diverse backgrounds and objectives can utilize this text Familiarity with inference methods such as likelihood and estimating function theory or modeling schemes in varying settings such as survival analysis and longitudinal data analysis can result in a full appreciation of the material but it is not essential since each chapter provides basic inference frameworks and background information on an individual topic to ease the access of the material The text is presented in a coherent and self contained manner and highlights the essence of commonly used modeling and inference methods This text can serve as a reference book for researchers interested in statistical methodology for handling data with measurement error or misclassification as a textbook for graduate students especially for those majoring in statistics and biostatistics or as a book for applied statisticians whose interest focuses on analysis of error contaminated data Grace Y Yi is Professor of Statistics and University Research Chair at the University of Waterloo She is the 2010 winner of the CRM SSC Prize an honor awarded in recognition of a statistical scientist's professional accomplishments in research during the first 15 years after having received a doctorate She is a Fellow of the American Statistical Association and an Elected Member of the International Statistical Institute *Statistical Evaluation of Measurement Errors* Graham Dunn, 2009-01-20 The statistical methods used to evaluate and compare different methods of measurement are a vital common component of all methods of scientific research This book provides a practically orientated guide to the statistical

models used in the evaluation of measurement errors with a wide variety of illustrative examples taken from across the sciences After introducing basic concepts such as precision reproducibility and reliability a detailed discussion of the sources of variability of measurements and associated variance components models is provided The central chapters deal with the design and analysis of method comparison studies concentrating primarily on quantitative measurements ranging from simple paired comparisons to more complex studies involving three or more methods This leads on to a review of methods for categorical measures

Measurement System Error Analysis Mike Peralta, 2012-02-15 The goal of this book is to carefully define and derive the statistical relationships relevant to the errors that do and can occur in measurement systems The emphasis is on test systems employed in manufacturing However the statistical techniques presented are general and can be applied to any field of science engineering or any field which employs the mathematics of statistics to gather and analyze information As will be explained throughout this book knowing the statistics of measurement error for test equipment will allow us to know and improve test accuracy and precision which in turn will allow us to greatly improve Product Quality Test Productivity and Product Yields The center of this work is the Test Capability Study this is a spreadsheet based analysis that can quickly be set up and give an estimate of the overall uncertainty of a measurement based on a sampling of test systems or test configurations The Test Capability Study is a streamlined and more efficient form of the Gage R R Study Also covered is the Propagation of Errors POE analysis to first and second order The first order POE is commonly treated in many fine books but the second order POE is rarely treated For those familiar with first order POE I think you will find it a real treat to study the second order POE as it will help you get a deeper and more accurate understanding of POE As well as treating measurement errors second order POE can accurately analyze variation contributions to product distributions as well as other variations in physical systems that can be defined mathematically
