Steel And Reinforced Concrete:

Concrete-steel Walter Noble Twelvvetrees,1905 Design of High Strength Steel Reinforced Concrete Columns

Sing-Ping Chiew,Yanqing Cai,2018-04-17 This book is the companion volume to Design Examples for High Strength Steel Reinforced Concrete Columns A Eurocode 4 Approach Guidance is much needed on the design of high strength steel reinforced concrete SRC columns beyond the remit of Eurocode 4 Given the much narrower range of permitted concrete and steel material strengths in comparison to EC2 and EC3 and the better ductility and buckling resistance of SRC columns compared to steel or reinforced concrete there is a clear need for design beyond the guidelines This book looks at the design of SRC columns using high strength concrete high strength structural steel and high strength reinforcing steel materials columns with concrete cylinder strength up to 90 N mm² yield strength of structural steel up to 690 N mm² and yield strength of reinforcing steel up to 600 N mm² respectively The companion volume provides detailed worked examples on use of these high strength materials This book is written primarily for structural engineers and designers who are familiar with basic EC4 design and should also be useful to civil engineering undergraduate and graduate students who are studying composite steel concrete design and construction Equations for design resistances are presented clearly so that they can be easily programmed into design spreadsheets for ease of use **Design Examples for High Strength Steel Reinforced**

Concrete Columns Sing-Ping Chiew,Yanqing Cai,2018-04-17 This book is the companion volume to Design of High Strength Steel Reinforced Concrete Columns A Eurocode 4 Approach This book provides a large number of worked examples for the design of high strength steel reinforced concrete SRC columns It is based on the Eurocode 4 approach but goes beyond this to give much needed guidance on the narrower range of permitted concrete and steel material strengths in comparison to EC2 and EC3 and the better ductility and buckling resistance of SRC columns compared to steel or reinforced concrete Special considerations are given to resistance calculations that maximize the full strength of the materials with concrete cylinder strength up to 90 N mm² yield strength of structural steel up to 690 N mm² and yield strength of reinforcing steel up to 600 N mm² respectively These examples build on the design principles set out in the companion volume allowing the readers to practice and understand the EC4 methodology easily Structural engineers and designers who are familiar with basic EC4 design should find these design examples particularly helpful whilst engineering undergraduate and graduate students who are studying composite steel concrete design and construction should easily gain further understanding from working through the worked examples which are set out in a step by step clearly fashion **Steel-reinforced Concrete**
