Steroid Receptors And The Management Of Cancer Volume I:

Steroid Receptors and the Management of Cancer Edward Brad Thompson, Marc E. Lippman, 1979 **Principles and Methods in Receptor Binding** F. Cattabeni, 2013-11-11 One of the major advances in the understanding of the mechanism of action of hormones neurotransmitters and drugs had arisen from the hypothesis that the physiological or pharmacological responses are triggered by their interaction with specific cell components termed receptors However the presence of receptors has been inferred from indirect data and only recently has it been possible to study the kinetics of the interaction between drug and receptors directly through the so called binding technique This NATO ASI on Principles and Methods in Receptor Binding was devoted mainly to the following aspects of the study of receptors the principles underlying the use of the binding technique the mathematical models necessary to interpret binding data the application of binding methods to specific receptors and finally a few selected examples of coupling between receptors and physiological responses In the chapters of this book special interest is devoted to the analysis of the simplest models for the interaction of receptors with their ligands either hormones or neurotransmitters or drugs The graphical techniques used to analyze the data from binding experiments are extensively discussed together with the statistics that have to be used in binding analysis Moreover the basic concepts to analyze binding data using a personal computer are presented v vi PREFACE The factors which should be considered when setting up a binding assay such as choice of ligand and incubation conditions preparation of tissue termination of incubation are discussed **Published Scientific Papers of the National Institutes of Health** National Institutes of Health (U.S.), 1981 Each issue lists papers published during the preceding year Scientific Directory and Annual Bibliography National Institutes of Health (U.S.), *Biochemical and Biological Markers of Neoplastic Transformation* Prakash Chandra, 2013-11-11 This volume is a record of the proceedings of a NATO Advanced Study Institute on Biochemical and Biological Markers of Neoplastic Transformation held September 28 October 8 1981 at Corfu Greece As early as 1860 Rudolf Virchow provided the first genetic concept of cancer by postulating *Omnia ceZZuZa e ceZZuZa ejusdem generis* a modification of the then existing cell theory *Omnis ceZZuZa e ceZZuZa* Thus the idea that all cells originate from the parent cell was extended to the idea that all cancer cells come from the parent cancer cell But how the first cancer cell arose or in other words how a normal cell changed to a cancer cell is even after 120 years a mystery Experimental studies of the past have convinced us that a number of factors contribute to the neoplastic transformation of a normal cell but our knowledge on the mechanisms involved in this process is still in an embryonic state In the last few years however this field has witnessed a most remarkable advancement catalyzed by the development of modern technology in the allied fields of immunology the production of monoclonal antibodies molecular biology and sequencing v PREFACE and cloning of oncogenes Presently it is becoming more and more evident to the wishful mind of those engaged in this research that we are approaching a turning point Thus an assessment of the present situation will be most desirable at this time *Steroid*

Processes and Contraception Kenneth W. McKerns, 2013-03-13 This monograph represents the eighth sponsored by the International Society for Biochemical Endocrinology The topics should be of interest to basic research scientists medical practitioners and students of reproductive biology It complements our monograph published in 1979 on Structure and Function of the Gonadotropins The monograph is organized in ten topic areas relative to the general theme of reproduction and contraception There are several chapters in each area Obviously all aspects of each area could not be covered An attempt was made to seek interesting basic research ideas and concepts that might in the future be applicable to fertility regulation The topics are interactions in gonadotropin regulation GnRH analogues as contraceptive agents receptors in cellular localization of hormones uterine and mammary receptors germ cell regulation and secretory proteins control mechanisms and metabolic regulations hCG peptides and anti sera as antifertility agents ieutinizatio n oocyte maturation and early pregnancy steroids and cell growth and finally prostaglandins and cell function The studies encompass many disciplines and techniques in anatomy physiology biochemistry and endocrinology in animals and humans both in vitro and in vivo A conference of contributors was held in Maine at the Asticou Inn in Northeast Harbor during the week of September 9 13 1979 The chapters as written for the monograph were presented for discussion by the participants who were selected for their knowledge of and contributions to this area of scientific investigation

Gynecologic Oncology C.T. Griffiths, Arlan

F. Fuller, 2012-12-06 At the turn of the century gynecology had achieved independence from surgery in most medical schools although gynecologists were surgeons their interests were turning toward nonsurgical aspects of their specialty In 1900 merely two years after the Curies discovery radium was first used as a treatment for carcinoma of the cervix In that day cervical cancer claimed more women's lives than any other malignancy and was described by William P Graves the second professor of gynecology at Harvard as follows Cancer of the cervix may rightly be termed of all tumors one of the most deadly and most ghastly It kills by slow torture causing in later stages months of agonizing pain and producing a discharge of such a foul and nauseating character as to repel proper medical assistance Nurses declined to care for these cases while many public hospitals closed their wards to them as patients In late twentieth century parlance the dramatic results of radium therapy would indeed have been called a breakthrough and radium techniques later combined with external irradiation were developed by gynecologists no longer just surgeons Pathology was the basic science of gynecology and gynecologists with a special interest in pathology served as pathologist to the departments of gynecology As late as 1970 six months of the three

year residency program in obstetrics and gynecology at Harvard were devoted to formal training in pathology
