Stimulating Concepts in Chemistry, 2005 Stimulating Concepts in Chemistry Fritz Vögtle, J. Fraser

Stoddart, Masakatsu Shibasaki, 2000 Fresh ideas have always been a necessary ingredient for progress in chemistry Without a continuous supply of stimulating ideas from creative researchers there would be no new insights into the subject But what are some of the ideas that pervade modern chemistry The answer to this question is to be found in *Stimulating Concepts in Chemistry* In a collection of 24 essays a group of leading researchers provides an overview of the most recent developments in their fields Readers can find out about modern concepts in chemistry such as self assembly nanochemistry and molecular machines Moreover many spectacular advances have been achieved from the fusion of chemistry with life and materials science a development which is illustrated by contributions on enzyme mimics molecular wires and chemical sensors Further the essayists write about new nanomaterials efficient methods in synthesis and big biomolecules indeed many of the topics that have dominated some of the recent discussions in chemistry This outstanding text makes use of a special layout to reflect the editors aim of presenting concepts in the form of essays Thus the book is not merely another source of knowledge but is intended to stimulate readers to develop their own ideas and concepts This format should help to make the book interesting to a wide range of scientists Students of chemistry will benefit from the different style of presentation of their subject while researchers in industry and academia will welcome the exciting way in which some of the most challenging concepts in modern chemistry are presented

Molecular Devices and Machines Vincenzo Balzani, Margherita Venturi, Alberto Credi, 2006-03-06 The miniaturization of bulky devices and machines is a process that confronts us on a daily basis However nanoscale machines with varied and novel characteristics may also result from the enlargement of extremely small building blocks namely individual molecules This bottom up approach to nanotechnology is already being pursued in information technology with many other branches about to follow Written by a team of experienced authors headed by Vincenzo Balzani one of the pioneers in the development of molecular machines Covers such diverse aspects as sensors memory components solar energy conversion biomolecules as molecular machines and much more Presented in a lucid style and didactically structured with both the expert and the newcomer in mind Includes a glossary of terms and numerous references to the recent literature Be among the first to explore the fascinating possibilities of this future oriented technology A must have for every chemist and materials scientist with an interest in nanotechnology

Microwave Methods in Organic Synthesis Mats Larhed, Kristofer Olofsson, 2006-09-21 This book presents critical reviews of the present position and future trends in modern chemical research It contains short and concise reports on chemistry each written by the world renowned experts The book is still valid and useful after 5 or 10 years More information as well as the electronic version of the whole content is available at springerlink.com The book will interest scientists and practitioners in the mentioned fields and in industry

Molecular Logic-based Computation A Prasanna de Silva, 2016-01-13 We all learn in

schools factories bars and streets We gather store process and transmit information in society Molecular systems involved in our senses and within our brains allow all this to happen and molecular systems allow living things of all kinds to handle information for the purpose of survival and growth Nevertheless the vital link between molecules and computation was not generally appreciated until a few decades ago Semiconductor based information technology had penetrated society at many levels and the interest in maintaining momentum of this revolution led to the consideration of molecules among others as possible information handlers Such an overlap between the recent engineering oriented revolution with the ancient biology oriented success story is very interesting and George Boole's times in Ireland 150 years ago produced the logic ideas that provide the foundations of computation to this day Molecular logic and computation is a field which is 17 years young has had a healthy growth and is a story which deserves to be told It is a growing branch of chemical science which highlights the connection between information technology engineering and biological and chemistry The author and co workers of this publication launched molecular logic as an experimental field by publishing the first research in the primary literature in 1993 and are uniquely placed to recount how the field has grown There is no other book at present on molecular logic and computation and is more comprehensive than that found in any review available so far It shows how designed molecules can play the role of information processors in a wide variety of situations once we are educated by those information processors already available in the semiconductor electronics business and in the natural world Following a short history of the field is a set of primers on logic computing and photochemical principles which are an essential basis in this field The book covers all of the Boolean logic gates driven by a single input and all of those with double inputs and the wide range of designs which lie beneath these gates is a particular highlight The easily available diversity of chemical systems is another highlight especially when it leads to reconfigurable logic gates Further on in the book molecular arithmetic and other more complex logic operations including those with a memory and those which stray beyond binary are covered Then follows molecular computing approaches which lie outside the Boolean blueprint including quantum phenomena and finally the book catalogues the useful real life applications of molecular logic and computation which are already available This book is an authoritative state of the art reference and a one stop shop concerning the current state of the field for scientists academics and postgraduate students

Enantioselective Organocatalysis Peter I. Dalko, 2007-04-17 In this reference leaders at the forefront of research provide an insight into one of the hottest topics in organic synthesis focusing on the most important enantioselective reactions Clearly structured each entry begins with a concise introduction including a mechanistic discussion of the reaction followed by preparative guidelines for newcomers such as carefully selected working procedures with critical notes for bench chemists rules of thumb and tips and tricks

Asymmetric Phase Transfer Catalysis Keiji Maruoka, 2008-03-31 Edited by the leading expert on the topic this is the first book to present the latest developments in this exciting field Alongside the theoretical aspects the top contributors provide practical protocols to give readers additional

important information otherwise unavailable A must for every synthetic chemist in academia and industry **Building and Probing Small for Mechanics** Christian Joachim, 2020-09-11 This book presents mechanics miniaturization trends explored step by step starting with the example of the miniaturization of a mechanical calculator The ultra miniaturization of mechanical machinery is now approaching the atomic scale In this book molecule gears trains of molecule gears and molecule motors are studied one molecule at a time on a solid surface using scanning probe manipulation protocols and in solution as demonstrated in the European project MEMO All scales of mechanical machinery are presented using the various lithography techniques currently available from the submillimeter to the nanoscale Researchers and nanomechanical engineers will find new inspirations for the construction of minute mechanical devices which can be used in diverse hostile environments for example under radiation constraints on the surface membrane of a living cell or immersed in liquid The book is presented in a format accessible for university students in particular for those at the Master and PhD levels

Nanotechnology for Electronic Materials and Devices Anatoli Korkin, Evgeni Gusev, Jan K. Labanowski, Serge Luryi, 2010-05-07 The high level of attention and interest of the global community to NANO science and technology to a large extent is linked to the GIGAntic challenges for the continuing growth of information technology which sparked an unprecedented level of interdisciplinary and international cooperation among industrial and academic researchers companies IT market rivals and countries including former political and military rivals Microelectronics technologies have reached a new stage in their development The latest miniaturization of electronic devices is approaching atomic dimensions interconnect bottlenecks are limiting circuit speeds new materials are being introduced into microelectronics manufacture at an unprecedented rate and alternative technologies to mainstream complementary metal oxide semiconductors CMOSs are being considered The very dynamic stage of science and technology related to the advanced and future electronics and photonics creates a growing gap between the large number of rapid publications and nanotechnology highlights in media on one side and fundamental understanding of underlying phenomena and an adequate evaluation of scientific discoveries and technological innovations on the other side Writing a tutorial book on fundamentals of science and technology for electronics at this time is almost the same level of challenge as writing a history book during a revolution *Intelligent Macromolecules for Smart Devices* Liming Dai, 2004-01-09 The age of nanotechnology is upon us Engineering at the molecular level is no longer a computer generated curiosity and is beginning to affect the lives of everyone Molecules which can respond to their environment and the smart machines we can build with them are and will continue to be a vital part of this 21st century revolution Liming Dai presents the latest work on many newly discovered intelligent macromolecular systems and reviews their uses in nano devices *Intelligent Macromolecules for Smart Devices* features An accessible assessment of the properties and materials chemistry of all the major classes of intelligent macromolecules from optoelectronic biomacromolecules to dendrimers artificial opals and carbon nanotubes In depth analysis of various smart devices including a critique of the

suitability of different molecules for building each type of device A concise compilation of the practical applications of intelligent macromolecules including sensors and actuators polymer batteries carbon nanotube supercapacitors novel lasing species and photovoltaic cells As an exposition of cutting edge research against a backdrop of comprehensive review Intelligent Macromolecules for Smart Devices will be an essential addition to the bookshelf of academic and industrial researchers in nanotechnology Graduate and senior undergraduate students looking to make their mark in this field of the future will also find it most instructive
