Temporal Logic: Understanding Reactive Systems Pasquale De Marco, Temporal logic is a powerful formal language for specifying and reasoning about the behavior of systems over time It has been successfully applied in a wide range of domains including reactive systems concurrent systems real time systems hybrid systems probabilistic systems game theory and artificial intelligence In this book we provide a comprehensive introduction to temporal logic covering both the theoretical foundations and the practical applications of the logic We start with the basics of propositional temporal logic and first order temporal logic and then move on to more advanced topics such as linear temporal logic computation tree logic hybrid logic and probabilistic temporal logic We also discuss the use of temporal logic in the specification and verification of reactive systems concurrent systems real time systems hybrid systems probabilistic systems games and artificial intelligence systems We cover both model checking and theorem proving techniques and provide numerous examples to illustrate the practical use of temporal logic This book is intended for a broad audience including computer scientists engineers mathematicians and philosophers It is also suitable for graduate students and advanced undergraduates who are interested in learning about temporal logic and its applications We believe that this book will be a valuable resource for anyone who wants to understand and use temporal logic to specify and reason about the behavior of complex systems Temporal logic is a powerful tool for reasoning about the behavior of systems over time It is used in a wide variety of applications including the specification and verification of reactive systems concurrent systems real time systems hybrid systems probabilistic systems games and artificial intelligence systems This book provides a comprehensive introduction to temporal logic covering both the theoretical foundations and the practical applications of the logic It is intended for a broad audience including computer

Norrie, 2003-05-15 Since the late 1980s the CAiSE conferences have provided a forum for the presentation and exchange of research results and practical experiences within the field of Information Systems Engineering CAiSE 2001 was the 13th conference in this series and was held from 4th to 8th June 2001 in the resort of Interlaken located near the three famous Swiss mountains the Eiger Mönch and Jungfrau The first two days consisted of pre conference workshops and tutorials The workshop themes included requirements engineering evaluation of modeling methods data integration over the Web agent oriented information systems and the design and management of data warehouses Continuing the tradition of recent CAiSE conferences there was also a doctoral consortium The pre conference tutorials were on the themes of e business models and XML application development The main conference program included three invited speakers two tutorials and a panel discussion in addition to presentations of the papers in these proceedings We also included a special practice and experience session to give presenters an opportunity to report on and discuss experiences and investigations on the use of methods and technologies in practice We extend our thanks to the members of the program committee and all other referees without whom such conferences would not be possible The program committee whose members came from 20 different countries selected 27 high quality research papers and 3 experience reports from a total of 97 submissions The topics of these papers span the wide range of topics relevant to information systems engineering from requirements and design through to implementation and operation of complex and dynamic systems

Logical Methods John N. Crossley, Jeffrey B. Remmel, Richard Shore, Moss E. Sweedler, 1994-01-26 The twenty six papers in this volume reflect the wide and still expanding range of Anil Nerode's work A conference on Logical Methods was held in honor of Nerode's sixtieth birthday 4 June 1992 at the Mathematical Sciences

Institute Cornell University 13 June 1992 Some of the conference papers are here but others are from students co workers and other colleagues The intention of the conference was to look forward and to see the directions currently being pursued in the development of work by or with Nerode Here is a brief summary of the contents of this book We give a retrospective view of Nerode's work A number of specific areas are readily discerned recursive equivalence types recursive algebra and model theory the theory of Turing degrees and recursive sets polynomial time computability and computer science Nerode began with automata theory and has also taken a keen interest in the history of mathematics All these areas are represented The one area missing is Nerode's applied mathematical work relating to the environment Kozen's paper builds on Nerode's early work on automata Recursive equivalence types are covered by Dekker and Barback the latter using directly a fundamental metatheorem of Nerode Recursive algebra is treated by George Richards group representations Recursive model theory is the subject of papers by Hird Moses and Khoussainov Dadajanov while a combinatorial problem in recursive model theory is discussed in Cherlin Martin's paper Cenzer presents a paper on recursive dynamics

ECOOP '95 - Object-Oriented Programming Walter Olthoff, 2003-05-16 For the ninth time now the European Conference on Object Oriented Programming provides a mid summer gathering place for researchers practitioners students and newcomers in the field of object technology Despite fierce competition from an increasing number of attractive conferences on object related topics ECOOP has successfully positioned itself as the premier European object technology conference One reason is without doubt the composition of the conference week and the nature of its events Running in parallel on the first two days a comprehensive tutorial program and a very selective workshop program are offered to attendees This is followed by a three day technical program organized in a single track providing a highly communicative atmosphere of scientific exchange and learning Overlapping with these events are a two day industrial exhibition and a two day opportunity for non industrial system developers to demonstrate their software Thus ECOOP is not

just a conference on programming but an event touching on the full spectrum of object technology This volume constitutes the proceedings of the Ninth European Conference on Object Oriented Programming ECOOP held in Aarhus Denmark August 7 11 1995 Previous ECOOP conferences were held in Paris France Oslo Norway Nottingham England Ottawa Canada jointly with OOPSLA Geneva Switzerland Utrecht the Netherlands Kaiserslautern Germany and Bologna Italy Object technology continues to increase its impact on the corporate world Perspectives of System Informatics Dines Bjørner, Manfred Broy, Alexandre V.
