Evolving Networking Technologies Kanta Prasad Sharma, Shaurya Gupta, Ashish Sharma, Dac-Nhuong Le, 2023-05-31 EVOLVING NETWORKING TECHNOLOGIES This book discusses in a practical manner some of the critical security challenges facing the ever evolving networking technologies of today In an age of explosive worldwide growth of electronic data storage and communications effective protection of information has become a critical requirement especially when used in coordination with other tools for information security and cryptography in all of its applications including data confidentiality data integrity and user authentication While the importance of cryptographic technique i.e encryption in protecting sensitive and critical information and resources cannot be overemphasized an examination of the technical evolution within several industries reveals an approaching precipice of scientific change The glacially paced but inevitable convergence of quantum mechanics nanotechnology computer science and applied mathematics will revolutionize modern technology The implications of such changes will be far reaching with one of its greatest impacts affecting information security and more specifically modern cryptography The book takes the reader through these issues As the security systems design becomes more and more complex to meet these challenges a mistake

that is committed most often by security specialists is not making a comprehensive analysis of the system to be secured before choosing which security mechanism to deploy. Often the security mechanism chosen turns out to be either incompatible with or inadequate for handling the complexities of the system. In addition, the book also discusses three main points: Configuration management is a critical issue and as networks are increasing in size, their configuration needs to be managed. Devices may conflict with each other in terms of configuration. Therefore, it becomes challenging for firewalls to be up to date according to network policies. Scalability of the network is another big challenge; it would be easier to address if the network stays the same but the network is ever expanding with a constant increase in the number of devices devoted to the network. Vendor lock-in: Business decisions that are taken today are revolving around the assumptions and capabilities of the current vendor and environment scenario. Buying the best solutions from today's vendors involves how to interoperate, integrate, and support multiple solutions. It may involve tearing out all of the longstanding kits without tearing down the entire network at the same time.

Audience: This book specifically appeals to industry practitioners, IT researchers, and students regarding network technological management.

Networking Print in Shakespeare's England Blaine Greteman, 2021-08-17. In *Networking Print in Shakespeare's England*, Blaine Greteman uses new analytical tools to examine early English print networks and the systemic changes that reshaped early modern literature, thought, and politics. In early modern England, printed books were a technology that connected people not only readers and writers but an increasingly expansive community of printers, publishers, and booksellers in new ways. By pairing the methods of network analysis with newly available digital archives, Greteman aims to change the way we usually talk about authorship, publication, and print. As Greteman reveals network analysis of the nearly 500,000 books printed in England before 1800, it makes it possible to speak once again of a print revolution, identifying a sudden tipping point at which the early modern print network became a small world where information could spread in new and powerful ways. Along with providing new insights into canonical literary figures like Milton and Shakespeare, data analysis also uncovers the hidden histories of key figures in this transformation who have been virtually ignored. Both a primer on the power of network analysis and a critical intervention in early modern studies, the book is ultimately an extended meditation on agency and the complexity of action in context.
