*Inventing the Novel* R. Bracht Branham, 2019-11-07 *Inventing the Novel* uses the work of the Russian philosopher Mikhail Bakhtin 1895 1975 to explore the ancient origins of the modern novel The analysis focuses on one of the most elusive works of classical antiquity the *Satyricon* written by Nero's courtier Petronius Arbiter whose singular suicide described by Tacitus is as famous as his novel Petronius was the most lauded ancient novelist of the twentieth century and the *Satyricon* served as the original model for F Scott Fitzgerald's *The Great Gatsby* 1925 as well as providing the epigraph for T S Eliot's *The Waste Land* 1922 and the basis for Fellini's *Satyricon* 1969 Bakhtin's work on the novel was deeply informed by his philosophical views if as a phenomenologist he is a philosopher of consciousness as a student of the novel he is a philosopher of the history

of consciousness and it is the role of the novel in this history that held his attention This volume seeks to lay out an argument in four parts that supports Bakhtin's sweeping assertion that the Satyricon plays an immense role in the history of the novel beginning in Chapter 1 with his equally striking claim that the novel originates as a new way of representing time and proceeding to the question of polyphony in Petronius and the ancient novel **Maggie O'Farrell** Elaine

Secure Coordination Control of Networked Robotic Systems Xiaolei Li, Jiange Wang, Xiaoyuan Luo, Xinping

Guan, 2024-03-19 As one of the core equipments and actuators robotic technology has attracted much attention and has made great progress However a single robotic system is often unable to handle complex tasks due to limitations in sensors microprocessors actuators and the ability to handle complex situations With the development of distributed control and microprocessing technology networked robotic systems have greatly expanded their perceptual computational and execution capabilities with high efficiency low cost and strong functionality advantages As a typical distributed cyber physical system DCPS which is an intelligent system that integrates computing communication and control networked robotic systems can perform higher level tasks by sharing information and working together It can provide intelligent control and monitoring of a

physical process such as environment observation information collection and search and rescue etc Thus coordination control of networked robotic systems has become the focus of scholars worldwide However the sensing communication and control integration of networked robotic systems make them face unprecedented network security threats in which cyber attacks have become a major hidden danger to the reliable operation of autonomous unmanned systems Although existing control methods can achieve swarm collaborative control of networked robotic systems the protection of which especially the security of control systems is rarely addressed In this book we conduct research on the secure coordination problem of networked robotic systems from a control theory perspective given the limited communication bandwidth and the increasingly prominent network security threats This book showcases several continuous time and event triggered secure control design and analysis methods for networked robotic systems under different types of cyberattacks Additionally several future research directions are provided for networked robotic systems This book will be an important reference for scientists engineers and graduate students from the field of underwater robotic technologies maritime science and control engineering

lives with his children in relative peace until the night his wife who left him three years ago for a car dealer returns home and announces she wants to move back in Just one catch she wants Frank to move out I enjoyed this book for its savagery its stoically enduring hero its taut explosive dialogue The Sunday Telegraph Biofictions Lejla Kucukalic,2021-09-22

Biofictions introduces three novel concepts biofiction bioimagination and biodiscourse to talk about intersections of literary and visual texts and biotechnology The book proposes a new interdisciplinary area of research that correlates processes of genetics and literature based on two critical approaches One drawing parallels between the genetic codes human language formal binary language and posthuman communication and the role of meaning and imagination in these forms of communication Two by defining biofictions as a critical scientific artistic concept and as a corpus of texts that engage ideas and developments in molecular biology Syncretic connection between biotechnology and literature is especially evident in an open science movement and the literary artistic genre of biopunk discussed across chapters The study includes well known contemporary texts such as David Foster Wallace s Infinite Jest that are recontextualized as biofiction it offers a rereading of important but neglected novels such as Thomas Disch s Camp Concentration 1967 and it analyzes new visual texts such as the TV series Altered Carbon and Ghost in the Shell films Based on these wide ranging examples and new critical concepts the book argues that coming up with possible alterations for the genetic code or intended traits for the organism is a discursive practice that brings into being bionarratives that are both organic and literary Chapter 1 of this book is freely available as a downloadable Open Access PDF under a Creative Commons Attribution Non Commercial No Derivatives 4 0 license
