Policy Space Index: Short-Term Response to a Catastrophic Event José Ferrer,Alexei Kireyev,Mr. Alexei P Kireyev,2022-06-17 What policy space does a country have for a short term response to a catastrophic event To quantify this space the paper proposes a policy space index The index combines a quantitative albeit relatively limited and narrow fiscal space concept with the indicators of nominal monetary space and reserve space Each nominal policy space indicator is then adjusted for individual country s institutional features such as the status of its currency income group access to capital markets debt distress level and the exchange rate regime The final policy space index is derived as a composite of the three nominal policy space indicators each adjusted for five institutional features This index is different from the approach to measure fiscal space at the IMF and requires more work before it can be used operationally The proposed index allows measuring the overall policy space in each country directly in percent of GDP By way of illustration the paper applies the index to the Covid 19 crisis

Short-term Visual Information Forgetting (PLE: Memory) A.H.C. van der Heijden,2014-05-09 When this title was originally published in 1981 the information processing approach to perception and memory was dominant in experimental psychology and the research reported here had major implications for future development After exploring the shortcomings of earlier work in this field the author develops a new model which he shows to be capable of accounting for a variety of experimental data connected with human information processing visual perception and attention The central theme which is discussed is how we select relevant and discard irrelevant information The basic assumption is that all incoming information is identified that is it reaches and activates the appropriate lexical entries A piece of identified information is described as a unit consisting of three distinguishable codes a visual code a lexical or semantic code and a motor or action code Identified information decays fast so selective attention operates by selecting those units which have to be saved from this rapid decay In a sense therefore the human information processor is described as struggling against forgetting

A. Brebbia, 2013-06-01 An increasing number of large scale natural disasters have affected millions of people in recent years Major earthquakes floods And hurricanes have caused great destruction of property and loss of life while forest fires pipeline failures and bombings have created equally devastating affects on a smaller scale The increased threats are the topic of the Third International Conference on Disaster Management and Human Health Risk convened so that experts on public health security and disaster management could share information This book contains the papers presented at the conference Topics covered include Disaster analysis Disaster monitoring and mitigation Emergency preparedness Risk mitigation Risk and security Safety and resilience Socio economic issues Biological threats Learning from disasters *Beta-Blockers in the Elderly* E. Lang, F. Sörgel, L. Blaha, 2012-12-06 In conjunction with the Twelfth International Congress of Gerontology the Carl Korth Institute for Cardiovascular Research organized an international symposium on Beta Blockers in the Elderly It was the intention of the Scientific Committee that during this symposium we would discuss the specific problems and therapeutic implications arising when elderly people have to be treated with beta blocking agents Special emphasis was placed on the side effects and the age dependent features of beta blocker therapy Beta blockers have

become established in the treatment of both cardiovascular diseases and neuropsychiatric disorders Their effectiveness in patients suffering from coronary heart disease hypertension and hyperkinetic cardiac syndromes has long been proven The development of new selectively active beta blockers has substantially reduced the number of possible side effects thus enhancing therapeutic safety Because side effects cannot be eliminated however beta blockers have been introduced only hesitantly into treatment of the elderly This book is the first wide ranging survey of the use of beta blockers in elderly patients The articles contained herei written by pharmacologists cardiologists sports physicians neurologists psychiatrists and ophthalmologists show that advanced age alone does not contraindicate the use of beta blockers and sympatholytic substances Also provided are guidelines for examination and determination of in dications in the elderly Both the symposium and the publication of this volume have been kindly supported by Astra Chemicals West Germany

who knows the story at first hand Her history looks forward as well as back besides asking how state of the art research compares with the hopes of the early pioneers she identifies the most promising current work Mind as Machine will be a rich resource for anyone working on the mind in any academic discipline who wants to know how our understanding of mental capacities has advanced over the years
