Villagran, Antonieta Jerardino, 2023-06-07 **The Evolution of Human Hunting** Matthew H. Nitecki, Doris V. Nitecki, 2013-11-11 The successful early adaptations of man involve a complex interplay of biological and cultural factors There is a rapidly growing number of paleontologists and paleoanthropologists who are concerned with hominid foraging and the evolution of hunting New techniques of paleoanthropology and taphonomy and new information on human remains are added to the traditional approaches to the study of past human hunting and other foraging behavior There is also a resurgence of interest in the early peopling of the New World The present book is the result of the Ninth Annual Spring Systematics 10 1986 in the Symposium on the Evolution of Human Hunting held on May Field Museum of Natural History in Chicago We are grateful to the NSF grant no BNS 8519960 for partial financial support in arranging the symposium In preparation of this volume we have received assistance from many people particularly the reviewers of

individual chapters it is impossible to name them all We must however single out Drs Richard G Klein and Glen H Cole for their encouragement at various stages of preparation of the symposium and this volume and for being a help to the anthropological knowledge Zbigniew Jastrzebski assisted with the figures and Paul K Johnson diligently typed the camera ready copy and patiently coordinated the endless book making chores

Petraglia, 2003-09-02 Early Human Behaviour in a Global Context will be of use to students and professionals who are interested in prehistory Paleolithic archaeology and paleoanthropology Those interested in our ancestors and their place in the natural world will also benefit from the information presented in this book Chapters focus on the nature of archaeological evidence stone tool technology subsistence practices settlement distributions

**Evolutionary History of the Robust Australopithecines** Frederick E. Grine, 2017-09-29 In paleoanthropology the group of hominids known as the robust australopithecines has emerged as one of the most interesting Through them we have the opportunity to examine the origin natural history and ultimate extinction of not just a single species but of an entire branch in the hominid fossil record It is generally agreed that the human lineage can be traced back to this group of comparatively small brained large toothed creatures This volume focuses on the evolutionary history of these early hominids with state of the art contributions by leading international authorities in the field Although a case can be made for a robust lineage the functional and taxonomic implications of the morphological features are subject to vigorous disagreement An area of lively debate is the possible causal relationship between the presence of early Homo and the origin evolution and virtual extinction of robust australopithecines This volume summarizes what has been learned about the evolutionary history of the robust australopithecines in the 50 years since Robert Broom first encountered the visage of a new kind of ape man from Kromdraai New discoveries from Kromdraai to Lomekwi have served to keep us aware that the paleontological record for hominid evolution is hardly exhausted Because of such finds no single volume can hope to stand as a summary on the robust australopithecines for very long but this classic volume comes close to achieving this goal The book sheds new light upon some old questions and also acts to provide new questions The answers to those questions bring us closer to a fuller understanding and appreciation of the origins evolution and ultimate demise of the robust australopithecines Since the robust australopithecines most likely stand as our closest relatives a better understanding of their origin history and demise serves to provide heightened appreciation of the course of human evolution itself This definitive volume addresses the questions and problems surrounding this important lineage
