Essentials of Computer Organization and Architecture with Navigate Advantage Access Linda Null, 2023-04-13 Essentials of Computer Organization and Architecture focuses on the function and design of the various components necessary to process information digitally This title presents computing systems as a series of layers taking a bottom up approach by starting with low level hardware and progressing to higher level software Its focus on real world examples and practical applications encourages students to develop a big picture understanding of how essential organization and architecture concepts are applied in the computing world In addition to direct correlation with the ACM IEEE guidelines for computer organization and architecture the text exposes readers to the inner workings of a modern digital computer through an integrated presentation of fundamental concepts and principles

NETWORKING 2000. Broadband Communications, High Performance Networking, and

Performance of Communication Networks Guy Pujolle, Harry Perros, Serge Fdida, Ulf Körner, Ioannis Stavrakakis, 2003-06-29

This was the first conference jointly organized by the IFIP Working Groups 6.2.6.3 and 6.4. Each of these three Working Groups has its own established series of conferences. Working Group 6.2 sponsors the Broadband Communications series of conferences: Paris 1995, Montreal 1996, Lisboa 1997, Stuttgart 1998, and Hong Kong 1999. Working Group 6.3 sponsors the Performance of Communication Systems series of conferences: Paris 1981, Zürich 1984, Rio de Janeiro 1987, Barcelona 1990, Raleigh 1993, Istanbul 1995, and Lund 1998. Working Group 6.4 sponsors the High Performance Networking series of conferences: Aachen 1987, Liège 1988, Berlin 1990, Liège 1992, Grenoble 1994, Palma 1995, New York 1997, Vienna 1998. It is expected that this new joint conference will take place every two years. In view of the three sponsoring Working Groups there were three separate tracks, one per Working Group. Each track was handled by a different co-chairman. Specifically, the track of Working Group 6.2 was handled by Ulf Körner, the track of Working Group 6.3 was handled by Ioannis Stavrakakis, and the track of Working Group 6.4 was handled by Serge Fdida. The overall program committee chairman was Harry Perros, and the general conference chairman was Guy Pujolle. A total of 209 papers were submitted to the conference, of which 82 were accepted. Each paper was submitted to one of the three tracks.

Declarative Networking Boon Thau Loo, Wenchao Zhou, 2022-05-31 Declarative Networking is a programming methodology that enables developers to concisely specify network protocols and services which are directly compiled to a dataflow framework that executes the specifications. Declarative networking proposes the use of a declarative query language for specifying and implementing network protocols and employs a dataflow framework at runtime for communication and maintenance of network state. The primary goal of declarative networking is to greatly simplify the process of specifying, implementing, deploying, and evolving a network design. In addition, declarative networking serves as an important step towards an extensible, evolvable network architecture that can support flexible, secure, and efficient deployment of new network protocols. This book provides an introduction to basic issues in declarative networking, including language design, optimization, and dataflow execution. The methodology behind declarative programming of networks is presented, including roots in Datalog extensions for networked environments and the semantics of long-running queries over network state. The book focuses on a representative declarative networking language called Network Datalog (NDlog), which is based on extensions to the Datalog recursive query language. An overview of declarative network protocols written in NDlog is provided, and its usage is illustrated using examples from routing protocols and overlay networks. This book also describes the implementation of a declarative networking engine and NDlog execution strategies that provide eventual consistency semantics with significant flexibility in execution. Two representative declarative networking systems, P2 and its successor RapidNet, are presented. Finally, the book highlights recent advances in declarative networking and new declarative approaches to related problems.
