The Rise of Interactive Governance and Quasi-Markets S.A. Denters,Oscar van Heffen,J. Huisman,P.J. Klok,2013-06-29 It has taken a long time to make this book Many initial drafts of the chapters published in this book were presented in November 2000 during a two day conference on Interactive governance towards a post parliamentary democracy held in Enschede The Netherlands The Netherlands Institute of Governance NIG sponsored the conference After this conference the organisers discussed the possibility of making a book on the basis of papers presented at this event In the end it was agreed that such a publication would indeed be worthwhile provided the initial papers were fundamentally revised Moreover it was agreed that also supplementary chapters should be included in order to strengthen the international comparative perspective On this basis authors of the conference papers chapters and envisioned new chapters were invited to re submit drafts The completion of the book however was unexpectedly halted by the tragic sudden death of our co editor and dear friend Oscar van Heffen In his lifetime he was the driving force behind this project Without his efforts insightful comments and helpful suggestions this book in its present form would never have been published As such we dedicate this volume to his memory the completion of the book being an honorary debt to our friend and his wife Mirjan *Adaptive Multimodal Interactive Systems* Matthias Bezold,Wolfgang Minker,2011-07-12 Adaptive Multimodal Interactive Systems introduces a general framework for adapting multimodal interactive systems and comprises a detailed discussion of each of the steps required for adaptation This book also investigates how interactive systems may be improved in terms of usability and user friendliness while describing the exhaustive user tests employed to evaluate the presented approaches After introducing general theory a generic approach for user modeling in interactive systems is presented ranging from an observation of basic events to a

description of higher level user behavior Adaptations are presented as a set of patterns similar to those known from software or usability engineering These patterns describe recurring problems and present proven solutions The authors include a discussion on when and how to employ patterns and provide guidance to the system designer who wants to add adaptivity to interactive systems In addition to these patterns the book introduces an adaptation framework which exhibits an abstraction layer using Semantic Web technology Adaptations are implemented on top of this abstraction layer by creating a semantic representation of the adaptation patterns The patterns cover both graphical interfaces as well as speech based and multimodal interactive systems
