

space of space. He even speaks of "outer space becoming cluttered with reconnaissance satellites" without acknowledging the important, even crucial, role that such "national technical means of verification" have played in making the SALT agreements possible. On the other hand, I believe he understates the potential danger of President Reagan's Strategic Defense Initiative in bringing weapons to space, although to be sure he makes but passing reference since this subject goes beyond the time-span of the book. (On a minor point, one of the few factual errors is a footnote reference [p. 404] to a "large number" of Soviet launchers once constructed for a fractional orbital bombardment system; the number was only 18.)

Arms control policy-making and negotiation are at least as much a matter of internal deliberation, maneuver, and decision as of international negotiation. Seaborg's detailed account is particularly rich in bringing this internal dimension into focus. He has strong if not unique qualifications for examining

the interface of scientific-technical and political considerations. He also had a very useful vantage point as one of the players in the political arena during the Johnson years. He draws on both of these strengths to advantage in this study. He gives examples (Pentagon devotion to MIRV as well as the previously noted AEC interest in Plowshare and State Department interest in the MLF and allied sensitivities) of instances in which legitimate but parochial interests may have stymied progress in arms control more than, in retrospect, they should have. Above all, as he rightly stresses, while all considerations should be brought to bear, there is an essential need for a personal and positive interest by the president in order to crystallize decisions and realize arms control potentialities. Demonstrating that lesson, so relevant to the situation today, is itself a major contribution of this excellent book.

Preventing Nuclear Terrorism. The Report and Papers of the International Task Force on Prevention of Nuclear Terrorism. PAUL LEVENTHAL and YONAH ALEXANDER, Eds. Lexington (Heath), Lexington, MA, 1987. xviii, 472 pp. \$56; paper, \$22.95. A Nuclear Control Institute Book.

Preventing Nuclear Terrorism is the product of a massive undertaking by the Washington-based Nuclear Control Institute and the Institute for Studies in International Terrorism at the State University of New York. The effort began with a major international conference in 1985, which led to a "task force" on nuclear terrorism made up of 26 experts from nine countries. The book contains the task force's final report and 26 background papers on terrorism involving stolen nuclear weapons or nuclear-weapon materials or attacks on nuclear facilities.

The study's conclusions can hardly be characterized as alarmist: "The good news is that the probability of terrorists turning to nuclear forms of violence is low. The bad news is that it is increasing" (p. xi). Indeed, the report notes that "as yet there are no public signs that any terrorists have the essential combination of capability and will to engage in an act of nuclear violence" (p. xii).

Why then the fuss? Is nuclear terrorism indeed, in the report's words (p. 14), "a real threat to civilization"? Vice President Bush (not a contributor) provides part of the answer: "Although we have so far been spared the terrible specter of nuclear terror-

ism, that doesn't mean that we don't need to begin addressing this problem" (p. 383).

Since nuclear terrorism is a relatively new concern in both academic and policy circles, the editors prudently went about "addressing this problem" by selecting authors from diverse professional backgrounds, including industry, government, research groups, and academia. The papers cover all levels of governmental activity—state and local, national, and international.

Despite the diversity of approaches, the group was united in endorsing the deferral of commercial uses of weapons-grade nuclear materials until national and international defenses against nuclear sabotage, terrorism, and theft are considerably improved.

Their findings make it clear that there is no "quick fix" to the problem of nuclear terrorism: nuclear facilities are vulnerable to truck bombs and insider sabotage; greater security is needed for nuclear weapons based on U.S. naval vessels and in countries where terrorism is prevalent; and transportation is the "weak link" in controls over international nuclear commerce. The study urges greater U.S.-Soviet cooperation and information sharing through such forums as "nuclear risk reduction centers," as suggested in the paper by Senators Sam Nunn and John Warner.

The timing could not be better for such a book. First, the Reagan Administration will soon be implementing its policy of "programmatic prior consent," under which certain U.S. nuclear trading partners will be exempted from case-by-case reviews for the

physical security of weapon-grade nuclear material produced from exported American technology or nuclear fuels. The effect of this policy will be to facilitate, rather than delay, international commerce in such materials. In Japan alone, this would mean transcontinental shipments of ton quantities of spent nuclear fuel to Europe and, eventually, ton quantities of plutonium from Europe back to Japan without case-by-case physical-security reviews by the United States.

Second, the superpowers are finally approaching agreement on the reduction and possible elimination of intermediate-range nuclear forces in Europe and perhaps Asia. The United States, under encouragement by friendly NATO governments, is seeking to keep over 4000 tactical battlefield nuclear weapons in Europe as a means of compensating for Soviet advantages in conventional forces and as a way to achieve a closer "coupling" of the United States to the defense of Europe. The safety and security of these tactical weapons are an important concern of this book.

The book is not without some rough edges. A great deal of empirical evidence on this delicate subject matter is classified, a problem that will continue to hamper the development of comprehensive databases. Moreover, analytical rules to guide the collection and interpretation of the evidence remain very inadequately defined. One contributor (Konrad Kellen) is brutally candid about the analytic shortcomings of research on the motivations of potential nuclear terrorists; he warns analysts of nuclear terrorism (a concept he terms "bottomless") to be conscious that they are "wading into a morass of confusion and fuzziness" (p. 106).

Given the lack of stable methodology, some contributors rely upon frameworks of analysis whose usefulness and relevance may in some cases be open to question. One contributor (Luis René Beres) asserts that "the principal grievance that potential terrorists have against the United States concerns misguided elements of U.S. foreign policy" (p. 146). Working from this premise, he offers the following dubious requirements for reducing nuclear terrorism: U.S.-Soviet nuclear disarmament, the demise of "anti-Sovietism" in U.S. foreign policy, and an end to U.S. support to "authoritarian regimes."

Others rely upon their past work on non-nuclear terrorism to provide considerable data on terrorist groups in regions ranging from El Salvador to Armenia, without firmly establishing the relevance of these data to nuclear terrorism. Yet the country with the highest incidence of attacks on nuclear facilities—Spain—receives very little attention. Although a methodological *saave qui prout*
