Stereogram Of Contours:

Perceiving in Depth, Volume 2: Stereoscopic Vision Ian P. Howard, Brian J. Rogers, 2012-01-27 The three volume work *Perceiving in Depth* is a sequel to *Binocular Vision and Stereopsis* and to *Seeing in Depth* both by Ian P Howard and Brian J Rogers This work is much broader in scope than the previous books and includes mechanisms of depth perception by all senses including aural electrosensory organs and the somatosensory system Volume 1 reviews sensory coding psychophysical and analytic procedures and basic visual mechanisms Volume 2 reviews stereoscopic vision Volume 3 reviews all mechanisms of depth perception other than stereoscopic vision The three volumes are extensively illustrated and referenced and provide the most detailed review of all aspects of perceiving the three dimensional world Volume 2 addresses stereoscopic vision in cats and primates including humans It begins with an account of the physiology of stereoscopic mechanisms It then deals with binocular rivalry binocular summation binocular masking and the interocular transfer of visual effects such as the motion aftereffect and visual learning The geometry of the region in binocular space that creates fused images the horopter is discussed in some detail Objects outside the horopter produce images with binocular disparities that are used for stereoscopic vision Two chapters provide accounts of mechanisms that bring the images into binocular register and of stimulus tokens that are used to detect binocular disparities Another chapter discusses cyclopean effects such as cyclopean illusions cyclopean motion and binocular direction that are seen only with binocular vision Stereoacuity is the smallest depth interval that can be detected Methods of measuring stereoacuity and factors that influence it are discussed Two chapters deal with the various types of binocular disparity and the role of each type in stereoscopic vision Another chapter deals with visual effects such as figure perception motion perception and whiteness perception that are affected by the relative distances of stimuli The spatiotemporal aspects of stereoscopic vision including the Pulfrich stereomotion effect are reviewed The volume ends with an account of techniques used to create stereoscopic displays and of the applications of stereoscopy

The Oxford Compendium of Visual Illusions Arthur Gilman Shapiro, Dejan Todorović, 2017 Visual illusions are compelling phenomena that draw attention to the brain's capacity to construct our perceptual world The Compendium is a collection of over 100 chapters on visual illusions written by the illusion creators or by vision scientists who have investigated mechanisms underlying the phenomena

Visual Space Perception Maurice Hershenson, 1999 A renewed interest in the study of vision has attracted scholars from such diverse fields as neuroscience computer science mathematics physics and philosophy At the same time the development of imaging devices and popularization of stereoscopic effects has increased student interest in vision This primer provides an overview of the principles of space perception in a handbook format that should appeal to researchers as well as students Topics covered include geometrical and distal proximal relationships spatial localization stereopsis cyclopean perception stimulus inadequacy pictorial cues perceived size and shape Gibsonian psychophysics lateral motion motion in depth perceived object motion and motion detection

Stereographic Projection

Techniques for Geologists and Civil Engineers Richard J. Lisle, Peter R. Leyshon, 2004-04-01 The stereographic projection is an essential tool in the fields of structural geology and geotechnics which allows three dimensional orientation data to be represented and manipulated This book has been designed to make the subject as accessible as possible It gives a straightforward and simple introduction to the subject and by means of examples illustrations and exercises encourages the student to visualise the problems in three dimensions Students of all levels will be able to work through the book and come away with a clear understanding of how to apply these vital techniques This revised edition contains additional material on geotechnical applications improved illustrations and links to useful web resources and software programs It will provide students of geology rock mechanics geotechnical and civil engineering with an indispensable guide to the analysis and interpretation of field orientation data

Statistics of Earth Science Data Graham J. Borradaile, 2013-11-11 The Goals of Data Collection and Its Statistical Treatment in the Earth Sciences The earth sciences are characterised by loose and complex relationships between variables and the necessity to understand the geographical distribution of observations as well as their frequency distribution Our frequency distributions and the looseness of relationships reflect the complexity and intrinsic natural variation in nature more than measurement error Furthermore earth scientists cannot design experiments according to statistical recommendation because the availability and complexity of data are beyond our control Usually the system we are studying cannot be isolated into discrete independent variables These factors influence the first steps of research how and where to collect specimens or observations Some issues are particularly troublesome and common in earth science but are rarely handled in an undergraduate statistics course These include spatial sampling methods orientation data regionalised variables time series identification of cyclicity and pattern discrimination multivariate systems lurking variables and constant sum data It is remarkable that most earth science students confront these issues without formal training or focused consideration

Beyond Art: A Third Culture Peter Weibel, 2005-05-17 A new theory of culture presented with a new method achieved by comparing closely the art and science in 20th century Austria and Hungary Major achievements that have influenced the world like psychoanalysis abstract art quantum physics Gestalt psychology formal languages vision theories and the game theory etc originated from these countries and influence the world still today as a result of exile nurtured in the US A source book with numerous photographs images and diagrams it opens up a nearly infinite horizon of knowledge that helps one to understand what is going on in today's worlds of art and science

The Role of Subjective Contours in Three Visual Illusions Hugh Leslie Baras, 1975 *Three-dimensional Displays Perceptual Research and Applications to Military Systems* David J. Getty, 1982 *Advanced Diagnostics and Treatment of Neuro-Ophthalmic Disorders* Albert Victor Van Den Berg, Krystel R. Huxlin, Lauren Ayton, Jeroen Goossens, Koen V. Haak, Holly Bridge, 2022-06-14

International Review of Research in Mental Retardation, 1992-09-18 This serial was established under the editorship of Dr Norman R Willis in 1966 As a result of his editorial effort and the contributions of many authors the

serial is now recognized as the area's best source of reviews of behavioral research on mental retardation. From its inception, active research scientists and graduate students in mental retardation have looked to this serial as a major source of critical reviews of research and theory in the area. These volumes are required reading for any professional seeking a deeper insight into the behavioral consequences of intellectual and developmental handicaps.
