Service and network providers must be able to satisfy the demands for new services, improve the quality of service, reduce the cost of network service operations and maintenance, control performance and adapt to user demands. It is essential to investigate different approaches for performing such tasks. One of these approaches is based on policies and the capability of the network to adapt itself to current conditions. With a focus on policy based networking, this volume addresses the problem of network control and the introduction of policies such as the control of the Quality of Service, security, mobility, performance, mobile and intelligent agents and traffic engineering. The area of control in networks through policies promises to provide stimulating challenges for years to come. This book is an attempt to answer questions and provide some direction about the best approaches to be followed. This volume contains the proceedings of the first International Conference on NETwork CONtrol and Engineering, NETCON for Quality of Service, Security and Mobility, which was sponsored by the International Federation for Information Processing (IFIP) and organized by IFIP TC6 Working Group 6.7 Smart Networks. The conference convened in Paris, France, in October 2002. Configuring Citrix Metaframe for Windows 2000 Terminal Services Melissa Craft, 2000-12-06. Configuring Citrix Metaframe for Windows 2000 Terminal Services describes all the means in using both Microsoft Windows 2000 Terminal Services and Citrix MetaFrame in an environment. The book specifically covers ways on designing the infrastructure, implementing the plan, troubleshooting the deployment and configuring servers and clients. The text also explains the process of deploying applications over the Internet, monitoring end users and securing applications and data. The book also directs how to improve applications performance with thin clients.
