J.M.G. Le Clézio Keith Moser, 2013 This monograph represents the first comprehensive study of the multifaceted representations of the complex phenomenon of globalization in the diverse repertoire of the 2008 Nobel Laureate in Literature This interdisciplinary investigation explores the initial euphoria related to the ambivalent concept of the global village and how this evaporated dream can perhaps be reappropriated to create a better global society for both the human and Cosmic Other through the lens of Le Clézio's fiction Chapter one offers a conceptual framework for understanding the Franco-Mauritian author's nuanced ideas concerning globalization It also probes the original ambivalence of McLuhan's celebrated notion of a global village in addition to its euphoric reception Chapter two explores the current state of the interconnected interdependent modern world in which many disenfranchised and marginalized individuals are living a recurring nightmare Chapter three examines Le Clézio's deconstruction of the simplistic ideology of consumerism that is indicative of contemporary consumer republics This section also underscores the intricate systems of hegemonic domination such as the media created by the transnational corporations that dominate the global economic landscape to sustain their supremacy Chapter four delves into Le Clézio's ecocentric humanism that extends to all other living creatures by debunking Manichean dualities that separate human beings from elemental matter and the rest of the universe The final chapter examines recent texts such as *Raga Ourania* and *Histoire du pied et autres fantaisies* which encourage the reader to envision what a more just and egalitarian global village might encompass These works dismiss neoliberal fantasies and consumerist ideology that have justified the systematic exploitation of everyone and everything in the name of progress but they also urge the modern subject to be resilient in the face of tremendous adversity Instead of accepting the imposition of a monolithic socioeconomic model that is riddled with inequality and injustice and which serves the interests of the Happy Few Le Clézio suggests that the first step is to resist integration into the global village by stoically confronting reality and having the necessary courage to propose another vision which counterpoints McLuhan's misguided one

Cataloging Policy and Support Office,2009 The Strange Case of the Rickety Cossack Ian Tattersall,2015-06-09 In his new book The Strange Case of the Rickety Cossack human paleoanthropologist Ian Tattersall argues that a long tradition of human exceptionalism in paleoanthropology has distorted the picture of human evolution Drawing partly on his own career from young scientist in awe of his elders to crotchety elder statesman Tattersall offers an idiosyncratic look at the competitive world of paleoanthropology beginning with Charles Darwin 150 years ago and continuing through the Leakey dynasty in Africa and concluding with the latest astonishing findings in the Caucasus The book s title refers to the 1856 discovery of a clearly very old skull cap in Germany s Neander Valley The possessor had a brain as large as a modern human but a heavy low braincase with a prominent brow ridge Scientists tried hard to explain away the inconvenient possibility that this was not actually our direct relative One extreme interpretation suggested that the preserved leg bones were curved by both rickets and by a life on horseback The pain of the unfortunate individual s affliction had caused him to chronically furrow his brow in agony leading to the excessive development of bone above the eye sockets The subsequent history of human evolutionary studies is full of similarly fanciful interpretations With tact and humor Tattersall concludes that we are

not the perfected products of natural processes but instead the result of substantial doses of random happenstance

Human Ecology Bernard Campbell, 2017-09-08 This new edition of a widely adopted primary and supplementary text explores human adaptations to environments over time. It is biologically and culturally sophisticated drawing on an impressive array of archaeological and paleontological research. Campbell proceeds from earlier simpler biomes to later more complex ones examining selected aspects of the prehistory and history of the human species. Human Ecology offers a succinct introduction to the history of these adaptations within ecosystems a shared concern among anthropologists biologists environmentalists and the general reader. In the years since this book was first published the problems that the human species has faced have become more serious. As predicted world population has rapidly increased and with it starvation malnutrition and disease. Our precious environment is being devastated. In particular the tropical rain forests our richest resource are being cut and burned at an alarming rate with the accompanying degradation of the forest soils. Their flora and fauna including their human inhabitants are being destroyed. All this is being done for short term financial gain without any long term planning or understanding of the risks involved. There are no simple and humane short term solutions to the central problem of increasing population pressure. In the long term the only hope of making possible a life of quality for all rather than a life of starvation and squalor is through education. It is essential that we understand the limits that exist to the earth's productivity and the overriding importance of maintaining richly diversified fauna and flora. If we understand how we arrived at this life threatening situation the resolution will become clear. Non violent and viable solutions do exist and can be implemented but the human race first must understand and face up to the nature of its frightening predicament.

Replications Whitney Davis, 2010-11-01 The twelve interdisciplinary essays collected here explore what Whitney Davis calls replication in archaeology art history and psychoanalysis the sequential production of similar artifacts or images substitutable for one another in specific contexts of use. Davis suggests that while archaeology deals with the physics of replication its material conditions and constraints psychoanalysis deals with the psychics of replication its mental conditions and constraints. Because art history is equally interested in the material properties and in the personal and cultural meaning of artifacts and images it can mediate the interests of archaeology and psychoanalysis. Thus Replications explores not only the differences between but also the common ground shared by archaeology art history and psychoanalysis focusing for example on their mutual interest in the style of artifacts or image making their need to treat the nonintentional or nonmeaningful element in production and their models of the subjective and social transmission of replications in the life history of persons and communities. Replications is an original contribution to an emerging field of study in domains as diverse as philosophy cognitive science connoisseurship and cultural studies the intersection of the material and the meaningful in the human production of artifacts. Davis develops formal models for and theories about this relationship exploring the ideas of a number of philosophers historians and critics and presenting his own distinctive conceptual analysis.
