Basketry of the Papago and Pima Mary Lois Kissell, 1916 *Innovation in Modular Industries* Dana Alice Sheffer, 2011 Product architectures are becoming increasingly modular along with the industries that produce them Instead of a single integrated firm designing and producing an entire product clusters of firms design and produce individual components that are later integrated While modularity has often been hailed as a catalyst for innovation I show that modularity can hinder some kinds of innovation Within a modular system innovations that are limited to individual modules without altering interfaces and processes modular innovations thrive while innovations that cross module boundaries and alter interfaces and processes integral innovations are stifled In a study of implementations of twenty three different technologies in one hundred and twelve US buildings I demonstrate that the odds for integral innovations to be implemented are 84% lower than for modular innovations even after accounting for technology costs and other factors The primary underlying mechanism is that integral innovations involve a loss of the embedded

coordination that standardization provides Thus I investigate supply chain integration as a moderator and a substitute for the lost coordination I compare high integration both vertical and horizontal medium integration either vertical or horizontal and low integration neither vertical nor horizontal I demonstrate that as integration increases so does the likelihood of implementing integral innovations In fact the odds of implementation of integral innovations increase by 542% in supply chains characterized by high levels of integration Thus I shed light on the relationship between an innovation s alignment with existing industry structure and standards and the complex moderating effect of supply chain integration in modular industries In addition I develop a comprehensive analytical framework to explain innovation diffusion in the construction industry integrating the supply chain learning and coordination issues discussed above with high levels of demand fluctuation competitive bidding by trade and broken agency
