Tuttle,2012 This book describes how the effects of nature s own nuclear reactors have shaped the Earth the Solar System the Universe and the history of life as we know it It focuses on observed effects that are poorly explained by our standard theories identifies certain errors in those theories and shows how these effects are caused by natural nuclear fission reactors The theory of Plate Tectonics is wrong and it is shown that expansion of the Earth causes continental drift A physically reasonable mechanism is proposed for expansion and observational data are presented to show that this occurs Evolution is explained as punctuated equilibrium with mutations caused by abrupt surges of radiation and related life forms that have been interpreted as seperate species are actually the result of radiation injury This view is particularly effective as applied to humans The ability of the dinosaurs to live so large is explained by use of Earth Expansion and a more massive atmosphere to provide buoyancy and effective transpiration of oxygen These effects also explain how pterodactyls and ancient birds could fly Expansion induced by impacts at the end of the Cretaceous caused the atmosphere to thin and the dinosaurs collapsed Analysis of geological and biological data supports this The astronomical distance scale is shown to be wrong based on the misconception that trigonometric parallax is an absolute measurement It isn t and the method is led astray by the overwhelming number of asteroidal fragments masquerading as stars The measurements of an expanding Universe are shown to be in error and an expanding Universe is not needed by an alternative interpretation of Einstein s equations This interpretation is based on the equal creation of matter and antimatter which is known to occur Spiral galaxies

are not vast Island Universes of stars as we have thought but are shown to be the strewn fields of debris from the nuclear fission detonation of distant planets The Universe is not made up of 96% Dark Matter and Dark Energy but is instead very ordinary Abundant evidence and references provide support for all these interpretations This book opens new opportunities for research by correcting several fundamental errors in our concepts of the Earth Life and the Universe **Information for Collectors** ,1995 **Nominalism and Contemporary Nominalism** M. Gosselin,2012-12-06 Though the subject of this work nominalism and contemporary nominalism is philosophical it cannot be fully treated without relating it to data gathered from a great variety of domains such as biology and more especially ethology psychology linguistics and neurobiology The source of inspiration has been an academic work I wrote in order to obtain a postdoctoral degree which is called in Belgium an Aggregaat voor het Hoger Onderwijs comparable to a Habilitation in Germany I want to thank the National Fund of Scientific Research which accorded me several grants and thereby enabled me to write the academic work in the first place and thereafter this book I also want to thank Prof SJ Doorman Technical University of Delft and Prof G Nuchelmans University of Leiden who were members of the jury of the Aggregaatsthesis presented to the Free University of Brussels in 1981 and who by their criticisms and suggestions encouraged me to write the present book the core of which is constituted by the general ideas then formulated I am further obliged to Mr X the referee who was asked by Jaakko Hintikka to read my work and who made a series of constructive remarks and recommendations My colleague Marc De Mey University of Ghent helped me greatly with the more formal aspects of my work and spent too much of his valuable time and energy to enable me to deliver a presentable copy All remaining shortcomings are entirely my responsibility I asked Prof
