Veerkamp, Y. Haas, 2022-12-31 The proceedings of the 12th World Congress on Genetics Applied to Livestock Production provide you with 816 papers representing the leading research in livestock genetics around the globe This book covers all aspects of genetics applied to livestock production in 44 sections Next to the exciting plenary speakers and the recurrent technical and species orientated sections there are sections focusing on specific challenges for animal breeding For instance large scale phenotyping of individual animals use of whole genome sequence data and improving genomic prediction and sessions on the contribution that genetics can make to societal challenges like animal welfare climate change biodiversity or control of infectious diseases      **Nanotoxicology in Caenorhabditis elegans** Dayong Wang, 2018-05-22 This book focuses on the toxicity of engineered nanomaterials ENMs and their underlying physicochemical cellular physiological and molecular mechanisms Further it covers ENMs translocation and their targeted organ toxicology and discusses chemical and pharmacological strategies used to combat nanotoxicity Engineered nanomaterials ENMs are defined as materials with one or more dimensions of less than 100 nm and have shown considerable promise in several areas of development At the same time the potential toxicity of ENMs for human health and environmental organisms is increasingly attracting attention In addition to the typical properties of model animals *Caenorhabditis elegans* is extremely sensitive to environmental toxicants which makes it the ideal *in vivo* assay system for toxicological studies *C elegans* has been widely used in toxicity assessment and toxicological studies of environmental toxicants and stresses This book provides a comprehensive summary of nanotoxicology research on *C elegans*      **Antiviral Immune Response in Fish and Shellfish** Verónica Chico Gras, María Del Mar Ortega-Villaizán, Luis Mercado, 2022-07-28      **The Generation of Diversity** Alfred I. Spicer,Juan D. Gaitan-Espitia,2023-07-24 Anthropogenic climate change has driven widespread changes in marine environments including ocean warming ocean acidification and the formation of hypoxic zones Such environmental changes would pose direct challenges to the survival and adaptation of aquatic organisms greatly affecting the biodiversity of marine life and marine ecosystems Changes in the marine environment are likely to have strong effects at the

physiological behavioral and molecular levels with implications at the individual population and species levels resulting in the degradation of genetic resources through massive mortality. For example the ingestion, digestion, respiration and growth of aquatic animals were greatly depressed under extreme environments. In the long run maintaining a sustainable ocean would require a better understanding of the adaptation of marine animals in response to the effects of multiple environmental stressors. The Research Topic is aimed to discuss the potential impacts of individual and compounded extreme environments on aquatic animals as well as the regulatory mechanisms and adaptation strategies of marine species to cope with these impacts.
