The Integrative Neurobiology Of Affiliation Bradfords:

The Integrative Neurobiology of Affiliation Carol Sue Carter, I. Izja Lederhendler, Brian Kirkpatrick, 1999 This book examines the biological especially the neural substrates of affiliation and related social behaviors Affiliation refers to social behaviors that bring individuals closer together This includes such associations as attachment parent offspring interactions pair bonding and the building of coalitions Affiliations provide a social matrix within which other behaviors including reproduction and aggression may occur While reproduction and aggression also reduce the distance between individuals their expression is regulated in part by the positive social fabric of affiliative behavior Until recently researchers have paid little attention to the regulatory physiology and neural processes that subserve affiliative behaviors The integrative approach in this book reflects the constructive interactions between those who study behavior in the context of natural history and evolution and those who study the nervous system The book contains the partial proceedings of a conference of the same title held in Washington DC in 1996 The full proceedings was published as part of the Annals of the York Academy of Sciences

Emotions, Stress, and Health Alex J. Zautra, 2003-03-06 Alex Zautra illustrates how experience with difficult or stressful emotional situations can contrary to popular belief be beneficial for example our ability to adapt to stress can be improved by experiencing difficult moments of emotional intensity Zautra masterfully integrates research and theory on emotion and stress identifying a unique and important role for stressful life events He offers new insights into how stress and emotions can influence health and illness and demonstrates the wide applicability of this perspective across domains of love and marriage work aging and community By reviewing research on chronic pain depression child abuse and addiction Zautra also provides new insights into clinical problems

Topographic Psychology Charles Raymond Snow, 2023-01-22 Contemporary psychology believes that there exists an entity called the mind whose task

is to deliberately control the body This entity is said to inhabit a dimension that is separate from the physical reality that is occupied by the brain Were this to be true then it might be possible for the mind to survive the death of its owner and be imported into another biological or mechanical body or be elevated into some metaphysical plane Topographic psychology dispenses with the concept of the mind Instead it asserts that the brain is a biological machine that uses an internal world model to transform sensation into movement This idea renders superfluous the concept of mindedness and enables human and animal behavior to be calibrated against evolution A world model largely consists of topographic maps Among these are a map of the proprietary territory of the brain's owner and a map of the owner's bones and muscles Although the territory exists in the outside world while the organs exist in the internal world of the body to the brain both maps represent pieces of the same reality Inhabiting the model's central axis is a neural artifact called the self object which serves within the owner's thinking as a proxy for the owner A transition from sensing to moving is called a decision Decisions that are made in the brain are facilitated by neural artifacts which are derived from sensory input that reside within the world model There are two fundamental kinds of artifacts objects and connections from which larger neural structures are assembled These include effectors which represent unitary actions by one party transactions which represent reciprocal actions between two parties polygon stacks which represent analogies inferences and stories a special polygon stack that represents the owner's autobiography pyramids which represent referents in the outside world and a special pyramid that represents the self object In order to promote its owner's survival a world model reacts to events in the external world by cycling the body between three physiological states There are three such states violence sex and work each of which reconfigures the body so that it can optimally respond to a threat or opportunity

El desarrollo de los niños, paso a paso Marta Sadurní Brugué, Carles Rostà Sánchez, Elisabet Serrat Sellabona, 2008 En *El desarrollo de los niños* se describen los cambios más comunes que experimentan los niños a lo largo de la primera y la segunda infancia y se analizan en las distintas áreas del desarrollo sin olvidar que forman parte de un todo integrado

Missione longevità Filippo Ongaro, 2023-03-14 Negli ultimi decenni l'aspettativa di vita indubbiamente aumentata grazie a cure mediche sempre più sofisticate ma spesso le terapie hanno prolungato la sopravvivenza senza aggiungere anni di reale salute e felicità Un approccio scientifico che può diminuire la nostra età biologica tenere lontane le patologie e aumentare il nostro benessere psicofisico comporta un cambiamento dello stile di vita e delle abitudini Il problema che nessuno ci spiega esattamente da dove partire quali sono i passi da fare e in che modo possiamo assicurarci la qualità della vita per più tempo Filippo Ongaro stato medico d'equipaggio degli astronauti per sette anni lavorando per l'Agenzia Spaziale Europea ESA La sua missione insieme ad altri ricercatori e medici era definire nuovi protocolli di alimentazione e allenamento psicofisico per mantenere al massimo la prestazione degli astronauti e rallentare l'invecchiamento accelerato a cui sono esposti nei viaggi spaziali Gli studi e l'esperienza i metodi con cui venuto a contatto gli hanno permesso di trasformare le recenti conoscenze scientifiche in strategie tecniche e strumenti per

raggiungere una sana longevità applicabili anche alle persone sulla Terra In questo libro Ongaro regala ai suoi lettori un approccio esclusivo e integrato che individua otto percorsi pratici che agiscono su protezione cellulare dimagrimento mantenimento della massa muscolare potenziamento fisico e mentale memoria e resilienza con risposte concrete e utilizzate da migliaia di persone che preservano la salute e protraggono nel tempo la qualità della vita Gender and Parenthood W. Bradford Wilcox, Kathleen Kovner Kline, 2013-02-12 The essays in this collection deploy biological and social scientific perspectives to evaluate the transformative experience of parenthood for today's women and men They map the similar and distinct roles mothers and fathers play in their children's lives and measure the effect of gendered parenting on child well being work and family arrangements and the quality of couples relationships Contributors describe what happens to brains and bodies when women become mothers and men become fathers whether the stakes are the same or different for each sex why across history and cultures women are typically more involved in childcare than men why some fathers are strongly present in their children's lives while others are not and how the various commitments men and women make to parenting shape their approaches to paid work and romantic relationships Considering recent changes in men's and women's familial duties the growing number of single parent families and the impassioned tenor of same sex marriage debates this book adds sound scientific and theoretical insight to these issues constituting a standout resource for those interested in the causes and consequences of contemporary gendered parenthood Hormones, Brain, and Behavior: Chapters 1-15, 2002
