Many college students remain puzzled by card catalogs can't find books they need and fail to use many of the important resources of the library despite tours, explanations and much assistance from librarians. In this book a community college librarian provides the direction students need to utilize the resources typically found in a community college.

Design-Tech: Building Science for Architects Jason Alread, Thomas Leslie, Rob Whitehead, 2025-03-19 The third edition of Design Tech provides an indispensable holistic resource for integrating building technologies into critically designed performance based architectural projects. The book's format follows the developmental stages of a typical architectural project; it provides a step by step process for addressing and integrating building sciences from first principles of human comfort, materials, structures and environmental systems to advanced construction systems and measures of building performance. Short chapters incorporate easy to understand information with hundreds of useful illustrations, tables and references that explain the why as well as the how of building science. The content focuses on what designers need to know in the studio to create sustainably designed integrated buildings and it prepares them for future discussions with engineers, contractors and consultants. The updated format builds a coherent framework for integrated project design studio development necessary for all contemporary accredited schools of architecture. Chapters build upon critical project information from schematics toward technical integration. New chapters emphasize performance based design strategies including sustainable design values, critical schematic planning, enhanced building envelope design strategies and advanced performance systems. Enhanced visualization of schematic design strategies helps explain sustainable design standards, code compliance and structural schematics and throughout the third edition focuses on contemporary issues such as embodied carbon, heavy timber construction, life cycle costs and long term performance. This will be a must read for all architecture students looking for an accessible guide to building science.

Design-Tech Thomas Leslie, Rob Whitehead, 2014-03-21 Design Tech is an indispensable holistic approach to architectural technology that shows you in hundreds of drawings and tables the why as well as the how of building science, providing you with a comprehensive overview. In this expanded edition, measurements and examples are listed in both metric and imperial units to reflect the global reality of architectural practice. The authors also address digital fabrication, construction documentation, ultra high rise structures and zoning codes. And there's more in depth coverage of structural design and greater emphasis on environmental forces. Numerous case studies demonstrate real world design implications for each topic so that you can integrate technical material with design sensibilities. Short chapters explain each topic from first principles in easy to reference formats focusing on what you need to know both at the drawing board and in future discussions with engineers, contractors and consultants. This new edition incorporates material from continuing curricular experimentation in the SCI TECH sequence at Iowa State University which has been recognized with awards and

funding from the American Institute of Architects the U S Green Building Council and the National Council of Architectural Registration Boards
