The Hunterian Lectures In Comparative Anatomy May And June 1837:

The Hunterian Lectures in Comparative Anatomy, May and June 1837 Richard Owen, 1992-08-15 Sir Richard Owen 1804 1892 comparative anatomist colleague and later antagonist of Darwin and head of the British Museum of Natural History was a major figure in Victorian science Yet historians of science have found Owen a difficult subject in part because he chose not to expound his views in a major theoretical work but rather presented them through annual lectures at the Royal College of Surgeons from 1837 to 1856 Nevertheless Owen's views on the nature of life the relations of form and function the meaning of fossils and the development of species gave his contemporaries such as Lyell Grant Huxley Whewell and Darwin a set of positions with which they could agree or disagree while developing their own views Now for the first time modern readers have access to the opening series of Owen's Hunterian Lectures in which he set out the larger framework of the theoretical reflections that occupied him during the next nineteen years Presented to the public in the two months before Darwin began his first notebook on the species question these lectures reveal the nature of the synthesis of French German and British biology taking place in metropolitan London in this crucial period in nineteenth century life science Phillip Reid Sloan has transcribed and edited the seven surviving lectures and has written an introduction and commentary situating the work in the context of Owen's life and the scientific and intellectual life of the time Sloan pays particular attention to Owen's early relations to the German scientific and philosophical tradition and in this respect contributes to an understanding of the relations between science and British Romanticism In the lectures Owen surveys the history of comparative anatomy up to his time and develops his views on the nature of life species duration physiological function and the relation between embryology and classification One can see the degree to which transcendental anatomy and the views of Von Baer Johannes Müller E G St Hilaire and Cuvier were current in London in the late 1830s from back cover The Hunterian Lectures in Comparative Anatomy, May and June 1837 Richard Owen, Phillip R. Wood, Songsuk Susan Hahn, 2012-09-10 The latest volume in the Cambridge Histories of Philosophy series The Cambridge History of Philosophy in the Nineteenth Century 1790 1870 brings together twenty nine leading experts in the field and covers the years 1790 1870 Their twenty eight chapters provide a comprehensive survey of the period organizing the material topically After a brief editor's introduction the book begins with three chapters surveying the background of nineteenth century philosophy followed by two on logic and mathematics two on nature and natural science five on mind and

Richards, 2009 This Companion commemorates the 150th anniversary of the publication of the Origin of Species and examines its main arguments Drawing on the expertise of leading authorities in the field it also provides the contexts religious social political literary and philosophical in which the Origin was written Biology and the Foundations of Ethics Jane Maienschein, Michael Ruse, 1999-02-28 This collection of essays focuses on the connection between biology and questions in ethics Genes, Determinism and God Denis Alexander, 2017-07-10 How does genetic variation impact on behavioural differences and how does this relate to free will and personal identity Denis Alexander examines these questions **Aristotle reads Hippocrates** , 2024-08-05 Despite Aristotle's family background and his undeniable impact on ancient Greek medicine the influence of medicine on Aristotle's philosophy is controversial and far from universally acknowledged The aim of this volume is to re-examine the influence of medical knowledge and literature on Aristotle's work in particular to explore the connections with the Hippocratic writings The volume encourages further exploration of this interdisciplinary area and offers new insights by presenting a series of case studies that examine in detail specific debates within the Aristotelian corpus in relation to the medical literature *Marking Time* Joel Faflak, 2017-11-29 Scholars have long studied the impact of Charles Darwin's writings on nineteenth century culture However few have ventured to examine the precursors to the ideas of Darwin and others in the Romantic period Marking Time edited by Joel Faflak analyses prevailing notions of evolution by tracing its origins to the literary scientific and philosophical discourses of the long nineteenth century The volume's contributors revisit key developments in the history of evolution prior to The Origin of Species and explore British and European Romanticism's negotiation between the classic idea of a great immutable chain of being and modern notions of historical change Marking Time reveals how Romantic and post-Romantic configurations of historical socio-cultural scientific and philosophical transformation continue to exert a profound influence on critical and cultural thought *Idealism, Relativism, and Realism* Dominik Finkelde, Paul M. Livingston, 2020-05-05 Several debates of the last years within the research field of contemporary realism known under titles such as New Realism Continental Realism or Speculative Materialism have shown that science is not systematically the ultimate measure of truth and reality This does not mean that we should abandon the notions of truth or objectivity all together as has been posited repeatedly within certain currents of twentieth century philosophy However within the research field of contemporary realism the concept of objectivity itself has not been adequately refined What is objective is supposed to be true outside a subject's biases interpretations and opinions having truth conditions that are met by the way the world is The volume combines articles of internationally outstanding authors who have published on either Idealism Epistemic

Relativism or Realism and often locate themselves within one of these divergent schools of thought As such the volume focuses on these traditions with the aim of clarifying what the concept objectivity nowadays stands for within contemporary ontology and epistemology beyond the analytic continental divide With articles from Jocelyn Benoist Ray Brassier G Anthony Bruno Dominik Finkelde Markus Gabriel Deborah Goldgaber Iain Hamilton Grant Graham Harman Johannes H bner Andrea Kern Anton F Koch Martin Kusch Paul M Livingston Paul Redding Sebastian R dl Dieter Sturma

Relating Religion

Jonathan Z. Smith,2004-11-10 One of the most influential theorists of religion Jonathan Z Smith is best known for his analyses of religious studies as a discipline and for his advocacy and refinement of comparison as the basis for the history of religions Relating Religion gathers seventeen essays four of them never before published that together provide the first broad overview of Smith s thinking since his seminal 1982 book Imagining Religion Smith first explains how he was drawn to the study of religion outlines his own theoretical commitments and draws the connections between his thinking and his concerns for general education He then engages several figures and traditions that serve to define his interests within the larger setting of the discipline The essays that follow consider the role of taxonomy and classification in the study of religion the construction of difference and the procedures of generalization and redescription that Smith takes to be key to the comparative enterprise The final essays deploy features of Smith s most recent work especially the notion of translation

Heady original and provocative Relating Religion is certain to be hailed as a landmark in the academic study and critical theory of religion

The Romantic Conception of Life Robert J. Richards,2024-05-31 All art should become science and all science art poetry and philosophy should be made one Friedrich Schlegel s words perfectly capture the project of the German Romantics who believed that the aesthetic approaches of art and literature could reveal patterns and meaning in nature that couldn t be uncovered through rationalistic philosophy and science alone In this wide ranging work Robert J Richards shows how the Romantic conception of the world influenced and was influenced by both the lives of the people who held it and the development of nineteenth century science Integrating Romantic literature science and philosophy with an intimate knowledge of the individuals involved from Goethe and the brothers Schlegel to Humboldt and Friedrich and Caroline Schelling Richards demonstrates how their tempestuous lives shaped their ideas as profoundly as their intellectual and cultural heritage He focuses especially on how Romantic concepts of the self as well as aesthetic and moral considerations all tempered by personal relationships altered scientific representations of nature Although historians have long considered Romanticism at best a minor tributary to scientific thought Richards moves it to the center of the main currents of nineteenth century biology culminating in the conception of nature that underlies Darwin s evolutionary theory Uniting the personal and poetic aspects of philosophy and science in a way that the German Romantics themselves would have honored The Romantic Conception of Life alters how we look at Romanticism and nineteenth century biology
