A History of Transplantation Immunology Leslie Brent, 1996-11-18 Those entering the field of transplantation are frequently unaware of the topics historical roots and even of the background on which modern discoveries in tolerance histocompatibility antigens and xenotransplantation are based A History of Transplantation Immunology is an account written by one of the founding fathers of the field of how tissue and organ transplantation has become one of the most successful branches of late 20th century medicine The book helps place the work of contemporary scientists into its proper context and makes fascinating reading for immunologists in all stages of their career Describes landmarks in immunology and places them in historical context Beautifully written by one of the founding fathers of the field Portrays the surprising history of events in a colorful and readable manner Contains biographical sketches of some of the pioneers Illustrates the development of key ideas in immunology tolerance graft rejection and transplantation Foreword by Ray Owen

Introductory Immunology Jeffrey K. Actor, 2023-02-02 Selected for Doody s Core Titles 2024 in Immunology Introductory Immunology Basic Concepts for Interdisciplinary Applications 3rd Edition is a completely updated revised and expanded concise conceptual approach to understanding the immune systems as a primary defense to maintain health and homeostasis This expanded version includes the aspects of microbiology and related immune defense mechanisms important in combating disease as well critical components related to the field of vaccine development Immunology as a subject is no longer confined to the realms of immunology or microbiology studies Indeed the subject matter has become increasingly important to understand complex mechanisms found within a wider range of biological systems This book aims specifically at educated audiences who do not have a deep understanding of medical biochemical or cellular knowledge The overall text will present concepts that portray a comprehensive picture of the natural defenses to infectious agents as well as provide an introduction to mechanisms that lead to autoimmune dysfunction In addition immunological diseases will be detailed with the goal of allowing the readers to gain sufficient knowledge to make sound choices for clinical decisions to affect treatment outcomes This new edition expands on the existing chapters focusing on updating the previous text It has been expanded to include knowledge on effector mechanisms addressing components inherent within cellular responses that are either newly discovered or missing from the previous edition It has an extra emphasis on aspects related to mechanisms important in combating microbial agents and critical sections on how vaccines protect against pathogenic invaders to limit associated pathology The goal is that

Introductory Immunology will become the preferred provider of core knowledge in immunology to build a foundation to explore components of the human immune system that work together to confer and understand dysregulation that causes clinical diseases. This book serves as a basic platform to define therapeutic interventions by creating appreciation for components of the human immune system to work together to confer lifelong protection providing a core knowledge in immunology to build a foundation to explore mechanisms involved in clinical disease and defining functional aspects of immunological terms to permit the reader easy access to comprehend specific topics presenting introduction to complex immunological concepts in a concise and easy manner that relates to clinical disease breaking down all of immunology into manageable logically digestible building blocks and providing a map to explore overlapping mechanisms of immune protective responses providing a platform to readers without medical biochemical or cellular expertise to understand and appreciate how immunology controls homeostasis and protects against pathogens

Progress in Immunology VI B Cinader, Richard G. Miller, 2014-05-10 *Progress in Immunology VI* Sixth International Congress of Immunology contains the proceedings of the Sixth International Congress of Immunology held in 1986. The papers review advances that have been made in the field of immunology and cover topics ranging from ontogeny and differentiation of B and T lymphocytes to diversification of immunoglobulins and T cell receptors. Antigen presentation and processing, the complement system and regulation of the immune response are also discussed. Comprised of 105 chapters, this book first explores the developmental biology of the immune system by focusing on the origins of selective theories of antibody formation and the clonal selection hypothesis. Clonal selection and the problem of immunologic tolerance are also considered. Subsequent chapters deal with the structure and function of recognition structures, B cell subsets and B cell activation, T cell subsets and T cell activation, lymphokines and growth factors, and autoimmune disorders. The remaining sections are devoted to oncogenesis and tumor immunity, the response of the host to the environment and host graft relationship. This monograph will be of interest to immunologists and biologists.

Transplant Immunology Xian C. Li, Anthony M. Jevnikar, 2015-09-09 With all the complex issues of acceptance or rejection of a transplanted organ, immunology is a key subject for all transplantation clinicians. During recent years, there has been an explosion of research and knowledge in this area. Produced in association with the American Society of Transplantation and written by experts within the field, *Transplant Immunology* provides a comprehensive overview of the topic in relation to clinical transplantation. Starting with the basic functionality of the immune system, it then moves on to cover the very latest developments in immunosuppressive drugs and protocols, as well as a look at all emerging technologies in the field. Key chapters include Transplant related complications, Immune responses to transplants, Emerging issues in transplantation, Biomarkers of Allograft rejection and tolerance, T cells and the principles of immune responses. In full colour throughout, over 100 outstanding diagrams support the text, all figures being fully downloadable via the book's companion website. The result is an essential tool for all those responsible for managing patients awaiting and undergoing
