Situation Theory And Its Applications:

Situation Theory and Its Applications: Volume 3 Robin Cooper, Peter Aczel, Kuniaki Mukai, John Perry, 1990 Situation theory is the result of an interdisciplinary effort to create a full fledged theory of information Created by scholars and scientists from cognitive science computer science and AI linguistics logic philosophy and mathematics it aims to provide a common set of tools for the analysis of phenomena from all these fields Unlike Shannon Weaver type theories of information which are purely quantitative theories situation theory aims at providing tools for the analysis of the specific content of a situation signal message data base statement or other information carrying situation The question addressed is not how much information is carried but what information is carried

Situation Theory and Its Applications: Volume 1 Robin Cooper, Kuniaki Mukai, John Perry, Center for the Study of Language and Information (U.S.), 1990 Situation Theory grew out of attempts by Jon Barwise in the late 1970s to provide a semantics for naked infinitive perceptual reports such as Claire saw Jon run Barwise's intuition was that Claire didn't just see Jon an individual but Jon doing something a situation Situations are individuals having properties and standing in relations A theory of situations would allow us to study and compare various types of situations or situation like entities such as facts events and scenes One of the central themes of situation theory of meaning and reference should be set within a general theory of information one moreover that is rich enough to do justice to perception communication and thought By now many people have contributed by the need to give a rigorous mathematical account of the principles of information that underwrite the theory

Logic and Information Keith J. Devlin, 1995-09-29 Intelligence can be characterised both as the ability to absorb and process information and as the ability to reason Humans and other animals have both of these abilities to a greater or lesser degree but the search for artificial intelligence has been hampered by our inability to create a theory that covers both of these characteristics In this provocative and ground breaking book Professor Keith Devlin argues that to obtain a deeper understanding of the nature of intelligence and knowledge acquisition we must broaden our concept of logic For these purposes Devlin introduces the concept of the infon a quantum of information and merges it with situations a mathematical construction generalising the notion of sets developed by Barwise and Perry at Stanford University in order to study the meaning of natural languages He develops and describes the theory here in general and intuitive terms and discusses its relevance to a variety of concerns such as artificial intelligence cognition natural language and communication

Making sense of theory and its application to social work practice Phil Musson, 2025-02-28 Do you struggle to get your head around the application of theory and associated methods of intervention to social work practice Making sense of theory and its application to social work practice is here to help you with a fresh approach written with the non theoretician in mind After exploring the expectations and limits of application of theory to practice Phil Musson sets about describing theories of explanation and their associated methods of intervention in an accessible way He follows this by looking at theoretically driven approaches and their associated methods of intervention One generic case study is used throughout tweaked slightly but maintaining the same service users and issues so you can see how the theory of explanation or approach and the associated method of intervention is applied You are also able to sharpen up your critical thinking skills as the author invites you to reflect on the theories of explanation and approaches discussed Making Sense of Theory and its Application to Social Work Practice will be immensely valuable to both social work students and practitioners

Theory and Application of Diagrams Michael Anderson, Peter Cheng, Volker Haarslev, 2003-07-31 Diagrams 2000 is dedicated to the memory of Jon Barwise Diagrams 2000 was the first event in a new interdisciplinary conference series on the Theory and Application of Diagrams It was held at the University of Edinburgh Scotland September 1-3 2000 Driven by the pervasiveness of diagrams in human communication and by the increasing availability of graphical environments in computerized work the study of diagrammatic notations is emerging as a research field in its own right This development has simultaneously taken place in several scientific disciplines including amongst others cognitive science artificial intelligence and computer science Consequently a number of different workshop series on this topic have been successfully organized during the last few years Thinking with Diagrams Theory of Visual Languages Reasoning with Diagrammatic Representations and Formalizing Reasoning with Visual and Diagrammatic Representations Diagrams are simultaneously complex cognitive phenomena and sophisticated computational artifacts So to be successful and relevant the study of diagrams must as a whole be

interdisciplinary in nature Thus the workshop series mentioned above decided to merge into Diagrams 2000 as the single interdisciplinary conference for this exciting new field It is intended that Diagrams 2000 should become the premier international conference series in this area and provide a forum with sufficient breadth of scope to encompass researchers from all academic areas who are studying the nature of diagrammatic representations and their use by humans and machines

Information Retrieval: Uncertainty and Logics Cornelis Joost van Rijsbergen, Fabio Crestani, Mounia Lalmas, 2012-12-06 In recent years there have been several attempts to define a logic for information retrieval IR The aim was to provide a rich and uniform representation of information and its semantics with the goal of improving retrieval effectiveness The basis of a logical model for IR is the assumption that queries and documents can be represented effectively by logical formulae To retrieve a document an IR system has to infer the formula representing the query from the formula representing the document This logical interpretation of query and document emphasizes that relevance in IR is an inference process The use of logic to build IR models enables one to obtain models that are more general than earlier well known IR models Indeed some logical models are able to represent within a uniform framework various features of IR systems such as hypermedia links multimedia data and user's knowledge Logic also provides a common approach to the integration of IR systems with logical database systems Finally logic makes it possible to reason about an IR model and its properties This latter possibility is becoming increasingly more important since conventional evaluation methods although good indicators of the effectiveness of IR systems often give results which cannot be predicted or for that matter satisfactorily explained However logic by itself cannot fully model IR The success or the failure of the inference of the query formula from the document formula is not enough to model relevance in IR It is necessary to take into account the uncertainty inherent in such an inference process In 1986 Van Rijsbergen proposed the uncertainty logical principle to model relevance as an uncertain inference process When proposing the principle Van Rijsbergen was not specific about which logic and which uncertainty theory to use As a consequence various logics and uncertainty theories have been proposed and investigated The choice of an appropriate logic and uncertainty mechanism has been a main research theme in logical IR modeling leading to a number of logical IR models over the years Information Retrieval Uncertainty and Logics contains a collection of exciting papers

proposing developing and implementing logical IR models This book is appropriate for use as a text for a graduate level course on Information Retrieval or Database Systems and as a reference for researchers and practitioners in industry
