Abstract

Introduction One experiences admiration and respect when acknowledging excellence in others. Admiration relates to the person's superior abilities, whereas respect focuses on the person as a whole. Although previous studies suggest a link between admiration/respect and motivation, it is unclear as to whether these emotions enhance task performance. We investigated the relationship between admiration/respect and task performance.

Method Forty-two Japanese participants completed an English exam, watched a video, and completed a second exam. In the video, an interviewer asked an English lecturer to provide tips for completing the exam. After the second exam, participants rated the amount of admiration and respect they had for the lecturer and interviewer. We examined whether experiencing admiration/respect enhanced exam scores.

Results We found that experiencing admiration had no significant effect on exam scores. However, the participants who had stronger respect for the lecturer improved their score ($p < 0.001$) whereas the score of the other participants did not differ between exams ($p = 0.504$). Moreover, the analysis showed a positive correlation between score increment and the amount of awe, a subcategory of the Japanese concept of respect ($p = 0.014$).

Conclusion The results suggest that respect (particularly awe), rather than admiration, is involved in performance improvement.

1 Introduction

Admiration and respect are positive social emotions experienced when we recognize excellence in others [1–11]. Admiration focuses on outstanding or moral behaviors [1, 12, 13], while respect focuses on the person as a whole based on those behaviors [2]. Although these emotions are similar, there are some differences between them. Previous studies have reported that admiration and respect as concepts are clustered differently based on similarity ratings of Japanese synonyms for admiration and respect [3, 6]. In addition, Nakatani, et al., [11] found that the experiences of admiration and respect activated different locations within the anterior temporal lobe. These results suggest that admiration and respect are experienced distinctly and have separate neural bases.

According to previous studies, admiration and respect play a significant role in enhancing motivation [1, 2, 9, 14]. Admiration for virtue (also called elevation) enhances moral and prosocial behaviors, while admiration for superior

Subjects Of Experience:

The Subject of Experience Galen Strawson, 2017-01-19 The Subject of Experience is about the self the person It takes the form of a series of essays which draw on literature and psychology as well as philosophy Galen Strawson discusses the phenomenology or experience of having or being a self What is the character of self experience and the fundamental metaphysics of the self Does the self exist If so what is its nature How long do selves last he develops an approach to the metaphysical questions out of the results of the phenomenological investigation He argues that it is legitimate to say that there is such a thing as the self as distinct from the human being At the same time he raises doubts about how long selves can be supposed to last insofar as they are distinct from human beings He also raises a doubt about whether a self or indeed a human being can really be said to lose anything in dying He criticizes the popular notion of the narrative self and considers the differences between Endurers or Diachronic people who feel that they are the same person when they consider their past and future and Transients or Episodic people who do not feel this He considers the first person pronoun I and a number of puzzles raised by the phenomena of self reference and self knowledge He examines Locke s Hume s and Kant s accounts of the mind and personal identity and argues that Locke and Hume have been badly misunderstood

Describing Inner Experience? Russell Hurlburt, Eric Schwitzgebel, 2011-08-19 A psychologist and a philosopher with opposing viewpoints discuss the extent to which it is possible to report accurately on our own conscious experience considering both the reliability of introspection in general and the particular self reported inner experiences of Melanie a

subject interviewed using the Descriptive Experience Sampling method Can conscious experience be described accurately Can we give reliable accounts of our sensory experiences and pains our inner speech and imagery our felt emotions The question is central not only to our humanistic understanding of who we are but also to the burgeoning scientific field of consciousness studies The two authors of Describing Inner Experience disagree on the answer Russell Hurlburt a psychologist argues that improved methods of introspective reporting make accurate accounts of inner experience possible Eric Schwitzgebel a philosopher believes that any introspective reporting is inevitably prone to error In this book the two discuss to what extent it is possible to describe our inner experience accurately Hurlburt and Schwitzgebel recruited a subject Melanie to report on her conscious experience using Hurlburt's Descriptive Experience Sampling method in which the subject is cued by random beeps to describe her conscious experience The heart of the book is Melanie's accounts Hurlburt and Schwitzgebel's interviews with her and their subsequent discussions while studying the transcripts of the interviews In this way the authors dispute about the general reliability of introspective reporting is steadily tempered by specific debates about the extent to which Melanie's particular reports are believable Transcripts and audio files of the interviews will be available on the MIT Press website Describing Inner Experience is not so much a debate as it is a collaboration with each author seeking to refine his position and to replace partisanship with balanced critical judgment The result is an illumination of major issues in the study of consciousness from two sides at once

electronic format with integrated interactive review questions *ICAME 2019* Ming Yu Cheng, Jay Rajasekera, Kabiru Maitama Kura, Abdul Razak Munir, 2019-10-25 We are delighted to present the proceeding of the 4th International Conference on Accounting Management and Economics ICAME 2019 held on 25th October 2019 in Makassar Indonesia ICAME is an annual agenda of the Faculty of Economics and Business Universitas Hasanuddin The rapid advancement in the business industry in the industrial revolution 4.0 era brings significant challenges not only to the business environment but also to university as higher education institutions to produce graduates who are able to compete globally as well as to adapt with changes in technology development This is the background of ICAME 2019 theme which is Enlightening Research Paradigm in Business and Economics beyond Industrial Revolution 4.0 The purpose of this conference is to produce qualified research and publications which is in turn expected to be referenced in solving society issues In addition this event is a forum to establish a network among academicians and business practitioners to encourage the growth of innovation and creativity in the field of Accounting Management and Economics The conference invited academicians students and business practitioners to participate in the Call for Paper to share their research results Therefore we are pleased to present this proceedings of the conference Singular Thought and Mental Files Rachel Goodman, James Genone, Nick Kroll, 2020-02-06 The notion of singular or de re thought has become central in philosophy of mind and language yet there is still little consensus concerning the best way to think about the nature of singular thought Coinciding with recognition of the need for more clarity about the notion there has been a surge of interest in the concept of a mental file as a way to understand what is distinctive about singular thought What isn't always clear however is what mental files are meant to be and why we should believe that thoughts that employ them are singular as opposed to descriptive This volume brings together original chapters by leading scholars which aim to examine and evaluate the viability of the mental files framework for theorizing about singular thought The first section of the volume addresses the central issues of the definition and nature of singular thought as well as how it relates to the notion of a mental file The second section addresses the legitimacy of the mental files conception of singular thought by assessing the philosophical motivations or the purported empirical support for the view or by laying out a specific version of it The third section helps to clarify both the notion of a mental file and the mental files conception of singular thought by focusing on their role in explaining de jure coreference in thought and language The volume then concludes with a final section that casts doubt on the mental files conception and the legitimacy of the file theoretic framework more generally Documents Boston (Mass.). School Committee, 1927 **Selves** Galen Strawson, 2009-07-30 What is the self Does it exist If it does exist what is it like It's not clear that we even know what we're asking about when we ask these large metaphysical questions The idea of the self comes very naturally to us and it seems rather important but it's also extremely puzzling As for the word self it's been taken in so many different ways that it seems that you can mean more or less what you like by it and come up with almost any answer Galen Strawson proposes to

approach the seeming problem of the self by starting from the thing that makes it seem there is a problem in the first place our experience of the self our experience of having or being a self a hidden inner mental presence or locus of consciousness He argues that we should consider the phenomenology experience of the self before we attempt its metaphysics its existence and nature And when we have considered what it s like for human beings assuming we can generalize about ourselves we need to consider what it might be like for other possible creatures what s the very least that might count as experience of oneself as a self This he proposes will give us a good idea of what we ought to be looking for when we go on to ask whether there is such a thing an idea worth following wherever it leads It leads Strawson to conclude that selves inner subjects of experience do indeed exist But they bear little resemblance to traditional conceptions of the self *New Frontiers in Microsimulation Modelling* Ann Harding,2017-10-19 In the past fifteen years microsimulation models have become firmly established as vital tools for analysis of the distributional impact of changes in governmental programmes Across Europe the US Canada and Australia microsimulation models are used extensively to assess who are the winners and losers from proposed policy reforms this is now expanding into new frontiers both geographically and in terms of policy areas With contributions from more than 60 international experts this volume offers a comprehensive introduction to the state of microsimulation internationally illustrating a wide range of new applications and approaches It will be of relevance to government policy makers social policy planners economists and those concerned with predicting the impact of public policy change and to academics in a variety of disciplines especially social and public policy human geography development studies and economics *Hypnosis and Experience (Psychology Revivals)* Peter Sheehan,Kevin McConkey,2015-03-27 The subject of hypnosis has not lost any of its ability to fascinate and intrigue and this holds equally true for both the layperson and the student of hypnotic behavior Phenomena of hypnosis range from simple tasks involving ideomotor response to more complex tasks involving substantial distortions of perceived reality such as age regression hallucination and amnesia Obviously with a topic so diverse and so interesting there are plenty of books around Originally published in 1982 what makes this title stand out is the authors focus instead of trying to survey the whole field and evaluate the full spectrum of theories about hypnosis they hone in on specific points of view with the aim of illustrating the nature of hypnotic phenomena **Assessment and Prediction of Speech Quality in Telecommunications** Sebastian Möller,2000-08-31 The quality of telecommunication voice services has become an important issue due to the evolving and liberalized market With the advent of new technologies however a diversification takes place which makes it necessary to carefully plan and observe network quality Speech communication quality as it is perceived by the user or customer of a service carries a multidimensional nature a fact which must be reflected in its assessment and prediction with quality models In this book a new schematic is developed which classifies different entities contributing to the quality of a service It takes into account conversational user as well as service related contributions Starting from this concept perceptively relevant constituents of speech communication quality are

identified A simulation model is developed and implemented based on physical elements of the transmission configuration It allows the perceptively most relevant parameters to be simulated in real time and for the conversation situation The book gives a valuable overview on assessment needed for reliably measuring the different quality dimensions For the planning of telephone networks quality models are presented which aim at predicting mouth to ear quality as it would be perceived by a user of the system These models are an important tool for the planner of telecommunication networks as they allow the expected quality to be estimated in advance even before the network has been set up Two well known models the SUBMOD and the E model are analyzed in more detail with an emphasis on the psychoacoustic and psychophysical backgrounds It turns out that model predictions are satisfactory for many types of degradations but they can still be improved especially for new types of impairments Proposals are made for quality model enhancement and combined approaches Due to its handbook character this book is an invaluable source of background information for anyone working in the field of speech quality assessment as well as telephone network planning and operation

Self-Experience Manuel García-Carpintero, Marie Guillot, 2023-01-03 Recent debates on phenomenal consciousness have shown renewed interest for the idea that experience generally includes an experience of the self a self experience whatever else it may present the self with When a subject has an ordinary experience as of a bouncing red ball for example the thought goes she is not just phenomenally aware of the world as being presented in a certain way a bouncy reddish roundish way in this case she is also phenomenally aware of the fact that it is presented to her This supposed phenomenal dimension has been variously called mineness for me ness pre reflective self awareness and subjective character among others This view associated with historical figures such as William James Husserl Merleau Ponty and Sartre is attracting a new surge of attention at the crossroads of phenomenology analytic philosophy of mind and the philosophy of cognitive science but also intense controversy This book explores some of the questions running through the ongoing debate on the putative subjective dimension of experience Does it exist the existence question What is it the essence question What is it for the function question and What else does it explain the explanation question The volume also surveys various domains of human experience both normal and pathological where a sense of self might be at play including agency bodily awareness introspection memory emotions and values and offers insights into the possible relations between the notions of subjective awareness involved The first part of the book is devoted to more sceptical or deflationary views about self experience and the second to more robust ones

The Feeling Body Giovanna Colombetti, 2017-06-30 A proposal that extends the enactive approach developed in cognitive science and philosophy of mind to issues in affective science In The Feeling Body Giovanna Colombetti takes ideas from the enactive approach developed over the last twenty years in cognitive science and philosophy of mind and applies them for the first time to affective science the study of emotions moods and feelings She argues that enactivism entails a view of cognition as not just embodied but also intrinsically affective and she elaborates on the implications of this claim for the study of emotion in psychology and

neuroscience In the course of her discussion Colombetti focuses on long debated issues in affective science including the notion of basic emotions the nature of appraisal and its relationship to bodily arousal the place of bodily feelings in emotion experience the neurophysiological study of emotion experience and the bodily nature of our encounters with others Drawing on enactivist tools such as dynamical systems theory the notion of the lived body neurophenomenology and phenomenological accounts of empathy Colombetti advances a novel approach to these traditional issues that does justice to their complexity Doing so she also expands the enactive approach into a further domain of inquiry one that has more generally been neglected by the embodied embedded approach in the philosophy of cognitive science

Thinking and Reasoning (Psychology Revivals) Jonathan St. B. T. Evans, 2013-12-19 The subject of thinking is the oldest in the whole science of psychology going back to well before the separation of the disciplines of philosophy and psychology Originally published in 1983 this collection of up to date critical essays about thinking with particular emphasis on reasoning is written from the perspective of psychologists who are themselves actively engaged in research into the nature of human thought The editor's introduction identifies the major issues which have traditionally concerned students of human thought and provides an historical background It describes how at first the subject was studied by introspection and how this method fell into disrepute at the end of last century A satisfactory alternative has not yet emerged although much recent work is based on the information processing model which sees the brain as a sophisticated computer Consequently the papers presented in this volume deal with a wide range of issues and a number of different experimental tasks and paradigms They cover most current approaches to the theory and methodology of cognitive psychology including problem solving the relationship
