father's footsteps and to become both an officer and a writer. From his youth in Palo Alto, California during the Great Depression to his service in the Pacific in the war against Japan to the epic submerged circumnavigation of the globe in early 1960 commanding one of the early nuclear powered submarines, Ned Beach's career encompasses a revolutionary period in American naval history. Not only did he experience it, he wrote about it. This book tells the story of his remarkable life, career and writing.

Save Our Souls: Rescues Made by U.S. Submarines During World War II Douglas E. Campbell, 2016-04-02. At last, nearly 2,400 people can claim that their lives were saved by a U.S. submarine during World War II. Of that number, 523 Allied aviators could claim that distinction after crashing their aircraft into the sea and being saved by a submarine operating in the Lifeguard League. The remaining number were a collection of other military and civilian personnel, each with a story to tell and now able to tell their grand children. Some of those rescued went on to retire as senior military officers, including U.S. Navy Admirals; some back to missionary work; some to manage large companies in later years; some to philanthropic endeavors to pay everyone back for saving their lives. Appendix A is an intensely researched index of nearly 2,200 names of those saved.

System Theories and A Priori Aspects of Perception J.S. Jordan, 1998-04-21. This book takes as a starting point John Dewey's article "The Reflex Arc Concept in Psychology" in which Dewey was calling for, in short, the utilisation of systems theories within psychology theories of behaviour that capture its nature as a vastly complex dynamic coordination of nested coordinations. This line of research was neglected as American psychology migrated towards behaviourism where perception came to be thought of as being both a neural response to an external stimulus and a mediating neural stimulus leading to or causing a muscular response. As such, perception becomes a question of how it is the perceiver creates neural representations of the physical world. Gestalt psychology, on the other hand, focused on perception itself, utilising the term "Phenomenological Field," a term that elegantly nests perception and the organism within their respective as well as relative levels of organisation. With the development of servo mechanisms during the second world war, systems theory began to take on momentum within psychology, and then in the 1970s William T. Powers brought the notion of servo control to perception in his book *Behavior: The Control of Perception*. Since then, scientists have come to see nature not as a linear chain of contingent cause-effect relationships but rather as a non-linear, unpredictable nesting of self-referential emergent coordinations best described as Chaos theory. The implications for perception are astounding while maintaining the double aspect nature of perception espoused by the Gestalt psychologists. In short, system theories model perception within the context of a functioning organism so that objects of experience come to be seen as scale-dependent psychophysically neutral phenomenological transformations of energy structures, the dynamics of which are the result of evolution and therefore a priori to the individual case. This a priori homological unity among brain, perception and world is revealed through the use of systems theories and represents the thrust of this book. All the authors are applying some sort of systems theory to the psychology of perception. However, unlike Dewey, we have close to a century of technology we can bring to bear upon the
