Neurosurgical Management of Aneurysmal Subarachnoid Haemorrhage I.A. Langmoen, Tryggve Lundar, Rune Aaslid, Hans-J. Reulen, 2012-12-06 The small neck of the aneurysm afforded an easy surgical attack An ordinary flat silver clip was placed over the sac and tightly compressed obliterated it completely The clip was flush with the wall of the carotid artery The sac lateral to the silver clip was then picked up with the forceps and thrombosed by the electrocautery Walter Dandy reporting his successful operation of a posterior communicating aneurysm on March 23 1937 Walter Dandy's patient left the

hospital in good health 2 weeks later and from his report one may gain the impression that the operation was an easy task Despite continuous developments during the following decades it was not until the introduction of the operating microscope and microsurgical techniques that surgical treatment was generally accepted During the microsurgical era surgical results have continued to improve due to diagnostical neuroanaesthesiological and microsurgical refinements and improved neurointensive care Endovascular obliteration has become an important treatment alternative but this has not been included in this particular volume The purpose of the present supplement of the ACTA NEUROCHIRURGICA is to review some of the elements in the neurosurgical management of patients with aneurysmal subarachnoid haemorrhage that are important for a successful outcome Professor Helge Nornes has been a major force in the development of new techniques and research strategies in this area for a number of years and has recently retired from the National Hospital in Oslo **Surgical**

gathering of minds and experience occurs that results in an all encompassing overview in depth of such a vast subject as Cerebro Vascular Malformations as occurred in Verona in June 1992 and which warrants publication Professors Da Pian and Pasqualin deserve high compliment and it is a measure of the respect in which they are held that virtually all those most knowledgeable around the world attended presented their work and thoughts and contributed to intense discussion Ljunggren's opening historical survey set the stage and must be the most comprehensive yet published Subarachnoid hemorrhage from aneurysm rupture still constitutes I dare say the most difficult problem for neurosurgeons in relief of the brain injury and arterial reaction and the technical perfection of aneurysm obliteration even for small as well as large and giant sacs Very large high flow A VMs can be as demanding too The bulk of the conference was devoted to subarachnoid hemorrhage aneurysms and A VMs which were discussed under about 14 headings each But vein of Galen malformations dural A VMs cavernous angiomas and venous angiomas renamed developmental venous anomalies came under scrutiny not always with consensus Trends are perceptible such as fibrinolysis of subarachnoid clot non surgery for Galenic and dural malformations the benignity of venous angioma but there is still much variation in approach pharmacologically technically and with such as the evolving endovascular and radiosurgical stories used alone or in conjunction
