Subsurface Hydrological Response To Land Cover And Land Use Changes:

Subsurface Hydrological Responses to Land Cover and Land Use Changes Makoto Taniguchi, 2012-12-06 Since human beings first appeared on the earth we have changed land cover and land use for our own purposes such as conveniences and high productivity. As a result of the land cover and land use changes, many serious environmental problems occur on the earth. Studying meteorological and hydrological effects of vegetation and land cover use changes helps us to understand the environmental changes and problems happening near the earth surface because the vegetation distributes the solar energy and water on the earth surface into atmosphere and geosphere. Subsurface hydrological responses to land cover and land use changes have drawn only regional environmental concerns although global change caused by biosphere change has been studied in various scientific fields. The changes in land cover and land use alter water solute and heat cycles in basins and elements of those balances including evapotranspiration, groundwater recharge rate, discharge rates into rivers or ocean, and soil moisture content, which are directly or indirectly related to the global environmental issues. Therefore, the changes in biosphere may substantially alter the subsurface hydrological system. For instance, increased groundwater recharge rates following clearing forest into grasses might be one consequence resulting in rising water tables and salinization.

Up Recommended Undergraduates and general readers CHOICE Booklist Editors Choice 2008 This superb interdisciplinary
work should find a place on the shelves of every public and academic library that has the least bit of interest in environment
issues which should mean just about all Booklist Starred Review Where does the environment leave off and society begin
When expanding production and consumption drives greenhouse gas emissions that warm the planet which in turn influence
the conditions of economic expansion it is unclear where the climate ends and the economy begins This fact is not new to our
era however our social and natural sciences have only recently come to grips with the incredible complexity of the world
described by understanding the environment and society as being of a piece As a result in the last decade there has been an
unprecedented explosion of new concepts theories facts and techniques that follow from such an understanding The
Encyclopedia of Environment and Society brings together multiplying issues concepts theories examples problems and
policies with the goal of clearly explicating an emerging way of thinking about people and nature With more than 1 200
entries written by experts from incredibly diverse fields this innovative resource is a first step toward diving into the deep
pool of emerging knowledge The five volumes of this Encyclopedia represent more than a catalogue of terms Rather they
capture the spirit of the moment a fascinating time when global warming and genetic engineering represent only two of the
most obvious examples of socio environmental issues Key Features Examines many new ideas about how the world works
what creates the daunting problems of our time and how such issues might be addressed whether by regulation markets or
new ethics Demonstrates how theories of environmental management based on market efficiency may not be easily
reconciled with those that focus on population and both may certainly diverge from those centering on ethics justice or labor

Offers contributions from experts in their fields of specialty including geographers political scientists chemists anthropologists medical practitioners development experts and sociologists among many others Explores the emerging socio environmental problems that we face in the next century as well as the shifting and expanding theoretical tools available for tackling these problems Covers regions of North America in greater detail but also provides a comprehensive picture that approaches as effectively as possible a cohesive global vision Key Themes Agriculture Animals Biology and Chemistry Climate Conservation and Ecology Countries Geography History Movements and Regulations Organizations People Politics Pollution Society Packed with essential and up to date information on the state of the global socio environment the Encyclopedia of Environment and Society is a time capsule of its historic moment and a record of where we stand at the start of the 21st century making it a must have resource for any library These inspiring volumes provide an opportunity for more new ways of thinking behaving and living in a more than human world *World Forests, Markets and Policies* Matti Palo,J. Groundwater in the Nile Delta Abdelazim M. Negm,2018-12-28 This unique volume offers an up to date overview of all the main aspects of groundwater in the Nile Delta and its fringes as well as latest research findings The themes covered include Nile Delta aquifer formation and its characteristics The use of the groundwater in the Nile Delta and its implications Sedimentology and hydrogeophysical characteristics Groundwater investigations and aquifer characterization using current direct resistivity and induced polarization Groundwater contamination and degradation Saltwater intrusion and its control Delineation of groundwater flow and seawater intrusion using various techniques including one dimensional subsurface temperature profiles geoelectrical resistivity and integrated subsurface thermal regime and hydrogeochemical data Modeling

of groundwater and of saltwater intrusion in the Nile Delta aquifer Excessive pumping and groundwater quality assessment for irrigation and drinking purposes Groundwater management for sustainability in the Nile Delta The volume appeals to postgraduate students researchers scientists professionals decision makers and planners Understanding the Impact of Human Interventions on the Hydrology of Nile Basin Headwaters, the Case of Upper Tekeze Catchments Tesfay Gebremicael, 2019-11-26 The availability and distribution of water resources in catchments are influenced by various natural and anthropogenic factors Human induced environmental changes are key factors controlling the hydrological flows of semi arid catchments Land degradation water scarcity and inefficient utilization of available water resources continue to be important constraints for socio economic development in the headwater catchments of the Nile river basin in particular over the Ethiopian Catchments This research investigates the impact of landscape anthropogenic changes on the hydrological processes in the Upper Tekeze basin A tributary of the Nile The hydrology of the basin is investigated through analysis of hydro climatic data remote sensing techniques new field measurements and parsimonious hydrological models The empirical evidence provided in this book confirms that human induced environmental changes can significantly change the hydrology of catchments both in negative degradation and in positive restoration ways This book also shows that rainfall runoff relationships in semi arid catchments are non uniform and hence the application of hydrological models in such catchments need special attention Moreover parsimonious dynamic hydrological model improves our understanding of the hydrological response to dynamic environmental changes **Sustainability Science for Watershed Landscapes** James Roumasset, Kimberly M.
