However, algebra at the elementary level has been garnering increasing attention and importance over the past 15 years. There is consequently a dire need for ideas, suggestions, and models for how best to achieve pre-algebraic instruction in the elementary grades. *Planting the Seeds of Algebra* will empower teachers with theoretical and practical knowledge about both the content and pedagogy of such instruction and show them the different faces of algebra as it appears in the early grades. The book will walk teachers of young children through many examples of K–6 math lessons and unpack step by step the hidden connections to higher algebra. After reading this book, teachers will be better equipped. **Artificial Intelligence in Education. Posters and Late Breaking Results, Workshops and Tutorials, Industry and Innovation Tracks, Practitioners, Doctoral Consortium and Blue Sky** Andrew M. Olney, Irene-Angelica Chounta, Zitao Liu, Olga C. Santos, Igbert Bittencourt, 2024-07-01 This volume constitutes poster papers and late breaking results presented during the 25th International Conference on Artificial Intelligence in Education AIED 2024 which took place in Recife, Brazil, during July 8–12, 2024. The 18 full papers and 92 short papers were carefully reviewed and selected from 200 submissions. They are organized in topical sections as follows: Part One: Blue Sky, Industry, Innovation, and Practitioner; Wide AIED and Late Breaking Results; Part Two: Late Breaking Results, Doctoral Consortium, Workshops and Tutorials. Disconnected William Wresch, 1996 In the Information Age, information is power. Who produces all that information? how does it move around? who uses it to what ends and under what constraints? Who gets that power? And what happens to the people who have no access to it? *Disconnected* begins with a striking vignette of two men. One is the thriving manager of a company selling personal computers and computer services. The other is just one among thousands of starving laborers. He has no way to find the information that might help him find a job; he cannot afford newspapers; rarely sees television; cannot understand the dialect of local radio broadcasts; will probably never touch a computer. These two men happen to live in Windhoek, Namibia, but this is not a story about Africa; it is a story that could be repeated almost anywhere in the world, even next door. With vivid anecdotes and data, William Wresch contrasts the opportunities of the information rich with the limited prospects of the information poor. Surveying the range of information—personal, public, organizational, commercial—that has become the currency of exchange in today's world, he shows how each represents a form of power. He analyzes the barriers that keep people information poor: geography, tyranny, illiteracy, psychological blinders, noise, crime. Technology alone, he demonstrates, is not the answer. Even the technology-rich do not always get access to important information or recognize its value. Wresch spells out the grim consequences of information inequity for individuals and society. Yet he ends with reasons for optimism and stories of people who are working to pull down the impediments to the flow of information. *Official Gazette of the United States Patent*
