Leukocyte-derived matrix metalloproteinase-9 in patients with coronary artery disease Simon Jönsson, 2015-02-18

Inflammation is closely associated with development of atherosclerosis. The proteolytic enzyme matrix metalloproteinase MMP 9 is considered to play a prominent role in this process. MMP 9 has also been introduced as a marker for plaque vulnerability. Still, the possible mechanisms behind altered levels of MMP 9 and its tissue inhibitors TIMPs in patients with atherosclerotic disease remain unclear. The general aim of this thesis was to compare leukocyte derived MMP 9 and TIMPs in patients with coronary artery disease CAD and healthy controls and to further relate the findings to psychological stress and glucocorticoid sensitivity. Levels of leukocyte derived MMP 9 and TIMP 1 showed a significant difference between CAD patients and controls. Neutrophils in CAD patients were more prone to release MMP 9 and furthermore PBMCs in patients expressed higher levels of MMP 9 and TIMP 1 and 2 mRNA than PBMCs in controls while there were no differences in plasma or serum levels. The increase in leukocyte derived levels of MMP 9 and TIMPs indicate the presence of preactivated leukocytes in CAD. Inflammation has been proposed as a mechanistic link between cardiovascular risk and depressive symptoms. We investigated whether the overexpression of leukocyte derived MMP 9 and TIMPs in CAD patients was associated with psychological factors. Patients exhibited sustained elevations in depressive symptoms; however, these symptoms were not related to any MMP 9 or TIMP variables. The findings suggest that overexpression of leukocyte derived MMP 9 and TIMPs and elevated depressive scores represent two parallel phenomena in CAD. Chronic inflammation may be associated with reduced glucocorticoid sensitivity. We found that PBMCs in CAD patients expressed significantly increased levels of glucocorticoid receptor GR mRNA, whereas GR mRNA levels did not differ between patients and controls. Moreover, in ex vivo assays dexamethasone efficiently suppressed MMP 9 and TIMPs equally or even more in patients compared to controls. The findings provide evidence for enhanced glucocorticoid sensitivity in CAD patients and also suggest that a state of relative hypocortisolism may contribute to the overexpression of leukocyte derived MMP 9 and TIMPs. Lastly, we explored the release of MMP 9, TIMPs, and cortisol in response to acute mental stress in CAD patients. Patients who exhibited a significant stress-induced increase in serum MMP 9 also exhibited an altered cortisol response. Moreover, the susceptibility to stress-induced increase in serum MMP 9 was associated with shorter leukocyte telomere length and atherosclerotic plaque burden. The findings highlight the existence of a high risk group which may be in need of improved diagnostic and therapeutic strategies.

Cardiovascular Specific Gene Expression P.A.F.M. Doevendans, Robert S. Reneman, Marc van Bilsen, 2013-04-17 Improving our insights into the genetic predisposition to cardiovascular disease is one of the most important challenges in our field in the next millennium not only to unravel the cause of disease but also to improve the selection of patients for particular treatments Nowadays for example subjects with a cholesterol above a particular plasma level are exposed to a cholesterol lowering regime based upon the beneficial outcome of epidemiological studies which include subjects not prone to the disease despite a plasma cholesterol above the accepted level Identification of the patients who are genetically predisposed to the consequences of this disorder will reduce the number of subjects unnecessarily treated and hence the costs of health care Because in most cardiovascular diseases the genetic component is a consequence of more than one gene defect only limited progress has as yet been made in identifying subjects genetically at risk For example in hypertension only in less than 10% of the patients the genetic defect has been identified It has been known for quite some time that in heart and blood vessels fetal genes are as high blood pressure and upregulated or induced when they are exposed to such disorders ischemia Little is known about the function of these genes

in the cardiac and vascular adaptation to these disorders only guesses can be made Novel Biomarkers for Heart Disease Michael Lichtenauer, 2020-12-28 Cardiac biomarkers such as troponins and natriuretic peptides have made a great impact on clinical decision making as well as improving our understanding of molecular mechanisms of different disease conditions However the biomarkers that are currently in use do not reflect all the multiple disease pathways that are involved in a broad spectrum of cardiac disease conditions ranging from acute coronary syndrome to heart failure and heart failure with preserved ejection fraction HFpEF to pulmonary hypertension or arrhythmias In this Special Issue we will provide an overview of the current developments in the field of biomarker research beginning with research on molecular pathways and cellular communication e g microRNA up to the clinical use of biomarkers **Atherosclerosis: Diet and Drugs** Arnold Eckardstein, 2005-11-02 Cardiovascular diseases continue to be the leading cause of death in the majority of industrialized countries The most frequent underlying pathology namely atherosclerosis and its clinical sequelae namely coronary heart disease cerebrovascular disease and peripheral artery disease remain common although for a long time we have been made aware of avoidable or modifiable etiological factors such as smoking fat rich diet or lack of exercise and although these adverse lifestyle factors have been extensively addressed by population wide primary prevention programs Cardiovascular morbidity and mortality also remain high despite successful anti hypertensive and lipid lowering drug therapies which help to reduce cardiovascular morbidity and mortality by about 30% in both secondary and tertiary prevention settings This can partly be explained by the increasing life expectancy and growing proportion of elderly people especially in Europe and North America In addition the World Health Organization makes the alarming prediction that probably in response to the spreading of western dietary behavior and lack of exercise resulting in an increasing prevalence of diabetes dyslipidemia and hypertension cardiovascular diseases rather than infectious diseases will become the most frequent cause of death worldwide This volume of the Handbook of Experimental Pharmacology entitled Atherosclerosis is divided into four parts and intends to give an overview on the pathogenesis of atherosclerosis established treatment and prevention regimen and of perspectives for the development of new treatment modalities **Cardiovascular Plaque Rupture** David L. Studies on Cardiovascular Disorders Heinrich Sauer,Ajay M. Shah,Francisco R. M. Laurindo,2010-09-11 This collection of articles on oxidative stress in clinical practice surveys essential current research in what is a rapidly evolving field As well as giving the reader a mechanistic overview of how oxidative stress affects cardiovascular disease it analyzes the potential of a number of therapeutic options that target these pathways Understanding the complexity of the cellular redox system could lead to the development of better targeted interventions that facilitate patient recovery Even as large scale clinical trials of so called simple antioxidant approaches such as vitamins C and E show that significant benefits for cardiovascular patients remain elusive Studies on Cardiovascular Disorders demonstrates that such approaches are too simplistic Beginning with a summary of redox signaling models that could induce the progression of redox associated cardiovascular disorders the volume moves on to examine redox mediated protein modification under physiological and pathophysiological conditions It provides an outline of the signaling pathways in cardiovascular development during embryogenesis and what impact these might have in the differentiation process of resident cardiac and blastocyst derived stem cells Further chapters detail our current knowledge of the influence the sensory nervous system exerts on the cardiovascular system and the paradoxical role of mitochondria derived ROS in cardiac protection In all almost 30 contributions cover issues as diverse as the antioxidant properties of statins in the heart and the oxidative risk factors for cardiovascular disease in women A range of medical practitioners will find the contents of Studies on Cardiovascular Disorders provides illuminating insight into the Janus faced role of ROS in the cardiovascular system
