## **Subcellular Biochemistry Vol 12 Immunological Aspects:**

**Methods in Disease** Victor R. Preedy, Ronald R. Watson, 1998-01-06 This practical account of the most up to date methods used to investigate gastrointestinal tract function and dysfunction has been written by some of the leading experts in gastrointestinal function from around the world It attempts to describe the scientific background to each test as well as discussing in a practical way the various methodologies involved

**Mycoplasma Cell Membranes** Shlomo Rottem, Itzhak Kahane, 2012-12-06 The mycoplasmas a trivial name used to denote organisms included in the class Mollicutes are a group of prokaryotic organisms comprising more than 120 species distinguished from ordinary bacteria by their small size and the total lack of cell walls The absence of a cell wall in mycoplasmas is a characteristic of outstanding importance to which the mycoplasmas owe many of their peculiarities for example their morphological instability osmotic sensitivity unique ion pumping systems resistance to antibiotics that interfere with cell wall biosynthesis and susceptibility to lysis by detergents and alcohols The fact that the mycoplasma cells contain only one membrane type the plasma membrane constitutes one of their most useful properties for membrane studies once the membrane is isolated it is uncontaminated with other membrane types Another advantage in using mycoplasmas as models for membrane studies stems from the fact that their membrane lipid composition can be altered in a controlled manner This characteristic results from the partial or total inability of the mycoplasmas to synthesize long chain fatty acids and cholesterol making mycoplasmas dependent on the supply of fatty acids from the growth medium The ability to introduce controlled alterations in the fatty acid composition and cholesterol content of mycoplasma membranes has been utilized in studying the molecular organization and physical properties of biological membranes

**Intracellular Parasites** José-Luis Avila, J. Robin Harris, 2013-11-11 Volume 18 of the Subcellular Biochemistry series which specializes in various aspects of the biochemistry of the intracellular parasites was initially proposed by Jose Luis Avila and strongly supported by myself as Series Editor of Subcellular Biochemistry Considerable assistance was received from Professor Frank Wunderlich University of Dusseldorf and more particularly from Dr Michael Miles London School of Hygiene and Tropical Medicine during the compilation of the list of possible chapters Our initial aim was to present a comprehensive survey of this broad field of study Although some interesting topics have been lost due to authors backing out late in the production schedule of the book the manuscripts that were submitted have provided a useful overview of the subject with notable strength within the field of Leishmania The 13 chapters of the book have been grouped according to subject The first five chapters deal with Leishmania and are followed by two chapters on Trypanosoma cruzi two on the malarial parasites and two on the Coccidia The final two chapters cover the Microsporidia and chemotherapy respectively

**Endocytic Components: Identification and Characterization** J.J.M. Bergeron, J. Robin Harris, 2013-11-11 In step with the rapid growth of research into the biochemical and functional characterization of the endosome Volume 19 surveys the recent advances in the methodological aspects of this field Coverage includes the use of free flow electrophoresis

to define endosome subpopulations the endosomal compartments in rat hepatocytes the role of endosomes in transmembrane signalling and six additional articles      **Journal of Bioenergetics and Biomembranes** ,1989      **Virally Infected Cells** J. Robin Harris,2013-11-11 Cellular virology has made tremendous advances in the past decade due to the availability and application of new immunological techniques together with the vast range of biochemical techniques and the continued impact of transmission electron microscopy The chapters contained in this volume provide significant coverage of the subject of cellular virology as a whole Considerable overall emphasis is placed upon the membrane biochemistry of viral proteins and glycoproteins within the infected cell In the opening chapter Edouard Kurstak and his colleagues provide a useful survey on the detection of viral antigens and antibodies by immunoassays This chapter with its emphasis on the important role of immunology in present day virology sets the scene for the volume Following this is an exciting presentation from Stefan Hoglund and his colleagues on ISCOMs and immunostimulation with viral antigens This unique approach is already proving to be of value particularly in animal virology A somewhat pharmacological diversion appears in Chapter 3 by Kazukiyo Onodera and his colleagues in which the biological activity of the damavaricin C derivatives is discussed This chapter provides a link between the biochemical and the chemotherapeutic approach in cellular virology Yet another specialist area is covered in Chapter 4 by Otto Schmidt and hnke Schuchmann Feddersen who discuss the role of virus like particles in para site host interactions of insects Contributing a strong biomedical emphasis to the volume is the provocative chapter by Abraham Karpas on human leukemia and retroviruses      **Subject Guide to Books in Print** ,1997      Plant Genetic Engineering B.B. Biswas,J. Robin Harris,2013-11-11 Eminent researchers provide broad coverage of plant molecular biology and genetic engineering detailing technological advances in plant cell transformation and responses This state of the art text includes coverage of molecular action of plant growth hormone signal transduction light mediated expression of genes and genetic engineering of crop plants and trees      **Artificial and Reconstituted Membrane Systems** J. Robin Harris,Abol-Hassan Etémadi,2013-11-11 This collection of 11 chapters is devoted to a survey of artificial and reconstituted membrane systems These are fundamental themes and areas of great current importance in membrane biochemistry They also relate well to the founding concept of this series namely to present studies that progressively work toward and provide us with an integrated view of the cell In this volume it is the application of a wide range of physiochemical and biochemical techniques to the study of membrane lipids and proteins which serves to demonstrate the significant progress that has been made in this field over the past 25 years From the understanding of simplified artificial systems it is hoped that it will ultimately be possible to gain a more accurate understanding of natural biological membranes in all their diversity This book is an appropriate successor to Volume 13 of the series which deals with fluorescence studies on biological membranes Indeed the present chapter by Lesley Davenport and colleagues was originally due for inclusion in Volume 13 but has been held over for inclusion in this volume where it integrates remarkably well with the other topics The extremely varied and interesting

contents of this volume are now briefly outlined In Chapter I Jacqueline A Reynolds and Darrell R McCaslin present a pertinent survey of the interaction of detergents with membrane lipids and proteins together with an assessment of the reconstitution process      **Breast Cancer: Progress in Biology, Clinical Management and Prevention** International Association for Breast Cancer Research. Conference,1989-10-31 Proceedings of the International Association for Breast Cancer Research Conference Tel Aviv Isreal March 1989      **Research Awards Index** ,1987      **Research Grants Index** National Institutes of Health (U.S.). Division of Research Grants,1973      Index of Conference Proceedings Received British Library. Lending Division,1980      Index of Conference Proceedings Received British Library. Document Supply Centre,1987      **Medical and Health Care Books and Serials in Print** ,1997      Scientific and Technical Books and Serials in Print ,1989      **Адаптационно-компенсаторные процессы** Андрей Андреевич Груздков,1991      Bowker's Medical Books in Print ,1975      Forthcoming Books Rose Arny,1993-04      *American Book Publishing Record* ,1998
