Clinical Assessment and Management of Severe Personality

Disorders Paul S. Links, 1996 Clinical Assessment and Management of Severe Personality Disorders Clinical Practice 35 offers the clinician working in the community a practicable approach to the treatment of patients with personality disorders. Clearly written with minimal use of jargon, this book focuses on issues relevant to the clinician in private practice including the diagnosis of a wide range of personality disorders and alternative management approaches. Recognizing patients with a personality disorder, differentiating one disorder from another, and using psychological tests in the diagnosis and treatment of personality disorders are among the clinical assessment issues covered. Two commonly encountered issues, the assessment and management of patients using a neuropsychiatric approach and treatment of patients with comorbid symptoms and personality disorders, are discussed. This book takes a broad approach to the management of personality disorders, moving beyond individual dynamic psychotherapy as the only treatment option. Pharmacological management of patients with personality disorders and differential management for patients in various settings are described. A discussion of the etiological impact and implications of early life experiences on the patient offers valuable insight for psychotherapeutic management. Clinicians are also provided with a useful framework for interacting and intervening with the families of patients with personality disorders.

Lawlor, 1995 Behavioral Complications in Alzheimer's Disease is the first book to focus exclusively on Alzheimer's disease and on the noncognitive disturbances associated with this disease. The book provides clinicians with practical management strategies for the identification, measurement, and treatment of behavioral symptoms in patients with Alzheimer's disease. Behavioral Complications in Alzheimer's Disease also informs the nonspecialist and trainee about important new findings. The liberal use of case histories and illustrations makes this a valuable reference text.

This book describes the clinical information known about the characteristics of assaultive patients and the characteristics of their assaults. It also reviews special issues of clinician safety related to women, psychiatric residents, and psychiatric nurses. Patient Violence and the Clinician provides concrete strategies for enhancing clinician safety through architecture, alarm systems, and behavioral strategies. It addresses staff issues and the humane treatment of violent patients. This book helps the clinician think about the cultural issues that surround treatment of violent patients before violence erupts.

Psychological Treatment Approaches for Young Children and Their Families Ingeborg Stiefel, Matthew Brand, Tanya Hanstock, 2024-03-05. Never disappoints! A concise authoritative guide, this book is a treasure trove and a delight to read. It provides the reader with an overview of the contemporary early intervention landscape with sufficient detail to allow readers to feel familiar with the key aspects of each approach without overwhelming them with too much new information.

Alan Carr PhD FPSI FBPSS Professor of Clinical Psychology UCD and Family Therapist Clanwilliam Institute Ireland. Early childhood is the most critical phase in human development. Negative influences can contribute to irreversible life-long struggles. What is learned in the first five years of life becomes the foundation for subsequent learning. It is vitally important that we effectively treat mental health problems when we find them in preschoolers. *Psychological Treatment Approaches for Children and Their Families* provides a comprehensive overview of 14 commonly available therapeutic interventions for children aged 3-5 years. It fills an important gap in a field where information about treatment options is limited compared with those suitable for older children and adolescents. The interventions presented are evidence-based and reflect various research backgrounds and theories of change. They are grouped into four sections covering individual child treatments, parent-focused approaches, dyadic carer-child interventions, and family systems models. Each section describes the models in a condensed yet comprehensive summary, offering information on its evidence base, key concepts, stages of therapy, session structure, treatment effects, and training options, along with a case study example illustrating the therapy in practice. The structure allows the reader to decide what treatments can be used for what presenting problem and under what conditions. A set of exercise questions concludes the end of each chapter to encourage better theory-practice links. The result is a text that provides ample opportunities for students and therapists to develop a knowledge base and understanding of how to best approach the treatment of psychological disorders in this age group.

Edited and authored by a select group of experienced clinical psychologists and psychiatrists with a particular interest in paediatric clinical psychology, this text is relevant for students, therapists, trainers, and supervisors, referrers, researchers, and funding bodies, as well as all those undergoing training in disciplines related to child development and clinical child psychology.
