*High-altitude Adaptations in the Southwest* Joseph C. Winter,1983 Excavation of Two Anasazi Sites in Southern Utah ,1981 The two reports published here contain elements which contribute substantially to this broader spectrum of Southwestern cultural change While primarily descriptive in nature these two site reports one from the western Kayenta area and one from the margin of the Mesa Verde area and the eastern Kayenta suggest that the changes which occurred in the more centralized portions of these regions were directly related to what happened on the margins That while the site

densities and population aggregates may not have been as high the same factors affected these marginal areas That conclusion could be expected but what may not be expected is the differential response which appears to have occurred After reading these two reports it appears that it may be possible to discern elements of change in these fringe areas that once defined will provide new insight into what happened and why and in what are presently the better known areas of the Southwest These two papers are important in sum not only because they are reports of work in poorly known areas but because they do provide analyses of fringe areas they help us to understand the Southwest generally From preliminary introduction     P-Z Library of Congress.
