Fact finding in judicial proceedings is a dynamic process. This collection of papers considers whether computational methods or other formal logical methods developed in disciplines such as artificial intelligence decision theory and probability theory can facilitate the study and management of dynamic evidentiary and inferential processes in litigation. The papers gathered here have several epicenters including i the dynamics of judicial proof ii the relationship between artificial intelligence or formal analysis and common sense iii the logic of factual inference including a the relationship between causality and inference and b the relationship between language and factual inference iv the logic of discovery including the role of abduction and serendipity in the process of investigation and proof of factual matters and v the relationship between decision and inference     The Proof Frederick Schauer, 2022-05-31

In a world awash in fake news where public figures make unfounded assertions as a matter of course a preeminent legal theorist ranges across the courtroom the scientific laboratory and the insights of philosophers to explore the nature of evidence and show how it is credibly established. In the age of fake news trust and truth are hard to come by. Blatantly and shamelessly public figures deceive us by abusing what sounds like evidence. Preeminent legal theorist Frederick Schauer proposes correctives drawing on centuries of inquiry into the nature of evidence. Evidence is the basis of how we know what we think we know but evidence is no simple thing. Evidence that counts in say the policymaking context is different from evidence that stands up in court. Law science historical scholarship public and private decisionmaking all rely on different standards of evidence. Exploring diverse terrain including vaccine and food safety election fraud claims the January 2021 events at the US Capitol the reliability of experts and eyewitnesses climate science art authentication and even astrology The Proof develops fresh insights into the challenge of reaching the truth. Schauer combines perspectives from law statistics psychology and the philosophy of science to evaluate how evidence should function in and out of court. He argues that evidence comes in degrees. Weak evidence is still some evidence. The absence of evidence is not evidence of absence but prolonged fruitless efforts to substantiate a claim can go some distance in proving a negative. And evidence insufficient to lock someone up for a crime may be good enough to keep them out of jail. This book explains how to reason more effectively in everyday life shows why people often reason poorly and takes evidence as a pervasive problem not just a matter of legal
