The Cultured Chimpanzee W. C. McGrew, 2004-10-21 Publisher Description **Biolinguistic Investigations on the Language Faculty** Anna Maria Di Sciullo, 2016-11-24 The papers assembled in this volume aim to contribute to our understanding of the human capacity for language the generative procedure that relates sounds and meanings via syntax Different hypotheses about the properties of this generative procedure are under discussion and their connection with biology is open to important cross disciplinary work Advances have been made in human animal studies to differentiate human language from animal communication

Contributions from neurosciences point to the exclusive properties of the human brain for language. Studies in genetically based language impairments also contribute to the understanding of the properties of the language organ. This volume brings together contributions on theoretical and experimental investigations on the Language Faculty. It will be of interest to scholars and students investigating the properties of the biological basis of language in terms of the modeling of the language faculty as well as the properties of language variation, language acquisition and language impairments. **Executive**

Functions and the Frontal Lobes Vicki Anderson, Rani Jacobs, Peter J. Anderson, 2010-10-18. This volume has as its primary aim the examination of issues concerning executive function and frontal lobe development. While many texts have addressed these issues, this is the first to do so within a specifically developmental framework. This area of cognitive function has received increasing attention over the past decade and it is now established that the frontal lobes and associated executive functions are critical for efficient functioning in daily life. It is also clear and of particular relevance to this text that these functions develop gradually through childhood and then deteriorate during old age. These developmental trajectories and the impact of any interruption to them are the focus of this volume. Handbook of Neuroscience for the Behavioral Sciences,

Volume 2 Gary G. Berntson, John T. Cacioppo, 2009-10-12. As technology has made imaging of the brain noninvasive and inexpensive, nearly every psychologist in every subfield is using pictures of the brain to show biological connections to feelings and behavior. Handbook of Neuroscience for the Behavioral Sciences Volume II provides psychologists and other behavioral scientists with a solid foundation in the increasingly critical field of neuroscience. Current and accessible, this volume provides the information they need to understand the new biological bases, research tools and implications of brain and gene research as it relates to psychology. *Finding the Zone* Gordon D. Lawrence, 2010-10-04. The zone experience is

where our best stuff flows together and we find powerful motivation to keep improving. Understanding life-long motivation patterns and the zone phenomenon are the keys to better teaching, supervision and parenting. **Human Nature** Greg Clydesdale, 2016-05-13. Humans are weird. They can be emotional, irrational and often unpredictable, yet as their manager, it is your job to get the best out of them. In fact, they are often the key to your success. Sadly, humans do not come with an instruction manual which lists their technical specifications. *Human Nature* by Greg Clydesdale is based on the premise that the key to good management is understanding human nature and interpersonal relations. But what is human nature? Greg argues that even where human nature is addressed at a conceptual level, the link between theory and what actually happens in the workplace is usually weak and often fails to recognize that social ability is probably the defining aspect. It is his intense focus on human nature and the link between a theoretical understanding of it and what actually happens in the workplace that makes this book so valuable. Throughout the book, you see how managers must constantly make balancing acts between conflicting forces that exist at any given time. But the essential message is: If you want to make the World a better place, focus on being a better manager to your staff. To help with this, you will find an elaboration of a theory-based approach in which a basic

model is provided and then elaborated on with examples from the work place The model consists of twenty human characteristics placed in three categories emotion motivation and cognition These characteristics are then linked to what managers have to do in the workplace *Evolutionary Psychology, Public Policy and Personal Decisions* Charles Crawford, Catherine Salmon, 2004-05-20 This volume's aim is to start the process of using theory and findings of evolutionary psychology to help make the world a better place to live Taking evolutionary psychology explicitly into applied areas it includes a reasonable scope of applications from pornography to psychopaths and from morality to sex differences in the workplace

Empathy in Mental Illness Tom F. D. Farrow, Peter W. R. Woodruff, 2007-03-29 The lack of ability to empathize is central to many psychiatric conditions Empathy is affected by neurodevelopment brain pathology and psychiatric illness Empathy is both a state and a trait characteristic Empathy is measurable by neuropsychological assessment and neuroimaging techniques This book first published in 2007 specifically focuses on the role of empathy in mental illness It starts with the clinical psychiatric perspective and covers empathy in the context of mental illness adult health developmental course and explanatory models Psychiatrists psychotherapists and mental health professionals will find this a very useful reference for their work
