The Hungry Planet Georg Borgstrom,1972 The Modern World at the Edge of Famine The Hungry Planet Georg Borgstrom,1965 *The Hungry planet* George J. Borjas,1967 *Leashing the Dogs of War* Chester A. Crocker,Fen Osler Hampson,Pamela R. Aall,2007 The definitive volume on the sources of contemporary conflict and the array of possible responses to it **The Metamorphosis of the Amazon** Maximilian Fritz Feichtner,2023-12-21 Offers new perspectives on the history of oil extraction in the Ecuadorian Amazon through the experiences of oil workers **The Political Economy of Gunnar Myrdal** Örjan Appelqvist,2013-11-26 The intellectual trajectory of Gunnar Myrdal Swedish Nobel Laureate economist sociologist and politician brings us through many of the major issues in the world economy and politics of the 20th century This new volume explores Myrdal s work on three major themes breaking away from conventional assumptions in Political Economy and highlighting flaws that can still be found in today s teachings on Political Economy finding ways of re creating Europe after WW II including the discussions between liberal Americans and European social democrats on how to create a more cooperative and socially just international order and understanding the impact or environmental concerns on growth and development starting with Myrdal s participation in the first UN Conference on Environment in Stockholm 1960 and continuing with his later writings What is then the relevance of these themes today In times when financial crisis threatens to block international and domestic economies when the European Union s promises of prosperity and cooperation seems to be severely threatened and when there is a large consensus that current modes of economic development are ecologically unsustainable can we find ways of transcending seemingly intractable dilemmas These questions will be discussed in the final part of the book Integrating Ecology and Poverty Reduction Jane Carter Ingram,Fabrice DeClerck,Cristina Rumbaitis del Rio,2012-02-15 In the past the science of ecology has frequently been excluded from the development agenda for various reasons Increasingly however there has been a renewed interest in finding more ecologically sustainable means of development that have required a strong foundation in ecological knowledge for example EcoAgriculture Partnerships EcoHealth presented at ESA and EcoNutrition proposed by Deckelbaum et al Each of these examples has already taken the critical first step at integrating ecological knowledge with agriculture health and nutrition respectively However this is only the first step more attention needs to be placed not only on the role that two fields can play towards poverty alleviation but on the role of a truly integrated interdisciplinary approach towards development goals that is firmly grounded in ecological understanding We feel that a critical look at what ecology can and cannot provide to the development agenda in light of the Millennium Development goals is timely and crucial The introduction and the final section of the book will then integrate the lessons and principles outlined in each of the chapters All chapter authors will be heavily encouraged to focus on how their sub discipline in ecology impacts overall human well being and environmental sustainability The Struggle for the Long-Term in Transnational Science and Politics Jenny Andersson,Eglé

Rindzevičiūtė,2015-04-10 This book reconsiders the power of the idea of the future Bringing together perspectives from cultural history environmental history political history and the history of science it investigates how the future became a specific field of action in liberal democratic state socialist and post colonial regimes after the Second World War It highlights the emergence of new forms of predictive scientific expertise in this period and shows how such forms of expertise interacted with political systems of the Cold War world order as the future became the prism for dealing with post industrialisation technoscientific progress changing social values Cold War tensions and an emerging Third World A forgotten problem of cultural history the future re emerges in this volume as a fundamentally contested field in which forms of control and central forms of resistance met as different actors set out to colonise and control and others to liberate The individual studies of this book show how the West European African Romanian and Czechoslovak long term was constructed through forms of expertise computer simulations and models and they reveal how such constructions both opened up new realities but also imposed limits on possible futures

The Politics of Hunger John W.

Warnock,2019-07-19 Originally published in 1987 This important and provocative book explains the persistence of hunger poverty and the lack of balanced development in many countries and the central role of agriculture in economic development Most theories of agricultural development are based on the experiences of western Europe and the United States while the two models for successful late development have been Japan and the Soviet Union This book surveys the evolution of agriculture under colonialism in Latin America Africa and Asia and concludes that this long period distorted the development prospects for these areas and retarded the production of food Under strong state capitalist governments a few underdeveloped countries have broken the colonial patterns of development However other post revolutionary societies are having far less success because of economic blockades and outside military intervention While the primary focus of the book is on the short run problems of inequality the author examines the long run ecological and resource constraints to a sustainable food system and raising the standard of living in the underdeveloped world

The Final Empire Wm. H. Kötke, 2007-11 In spite of its tough message there is much compassion and humanity in The Final Empire Right away as you begin to read this work you sense increasingly the grand perspective in K tke s words He is not speaking of anarchy He is offering vital common sense It s just that his meaning is so unavoidably political And so much against what we have been taught all our lives The materialistic values of civilization teach us that the accumulation of wealth is progress The material wealth of the civilization is derived from the death of the earth the soils the forests the fish stocks the free resources of flora and fauna The ultimate end of this is for all human species to live in giant parasitical cities of cement and metal while surrounded by deserts of exhausted soils The simple polar opposites are the richness and wealth of the natural life of earth versus the material wealth of people living out their lives in artificial environments This amounts to a direct challenge to humankind A demand for radical change A re envisioning of our part in the community of life and the precepts of individuality And Mr K tke provides a strong argument for this case He traces the environmental scars of civilization through the ages Empire after empire desertification of the top soil winds its way around the globe in an erosive helix from China to India to Mesopotamia to Italy to North America As radical as it may seem at first glance The Final Empire is a necessary and sensible primer for the recovery of the planet It blends a critical statistical analysis of our deteriorating environment with a positivism of hope for a post empire age and a new whole human relation to the living community of Earth Dan Armstrong Author of the Novels Prairie Fire and Taming the Dragon
