The

International Economy and the Undeveloped World, 1865-1914 A. J. H. Latham, 2006 Economic Historians generally consider the international economy through the lens of the most economically powerful nations This Western perspective distorts the true picture of how the international economy operates The International Economy and the Undeveloped World seeks to redress this fundamental bias and argues that Africa and Asia have a dramatic impact on the economies of the wealthier nations This volume concentrates on the role of developing nations in the 50 years preceding the first world war These regions it argues were instrumental in the evolution of the world economy Indeed it could not have evolved in the manner that it did without them Latham points to the fact that the so called free trade era was unsustainable without the developing countries without which Europe and America would have had to make fundamental readjustments This book was first published in 1978

The International Economy Paul T. Ellsworth, 1950 **Constructing the International Economy** Rawi Abdelal, Mark Blyth, Craig Parsons, 2011-03-15 Focusing empirically on how political and economic forces are always mediated and interpreted by agents both in individual countries and in the international sphere Constructing the International Economy sets out what such constructions and what various forms of constructivism mean both as ways of understanding the world and as sets of varying methods for achieving that understanding It rejects the assumption that material interests either linearly or simply determine economic outcomes and demands that analysts consider as a plausible hypothesis that economies might vary substantially for nonmaterial reasons that affect both institutions and agents interests Constructing the International Economy portrays the diversity of models and approaches that exist among constructivists writing on the international political economy The authors outline and relate several different arguments for why scholars might attend to social construction inviting the widest possible array of scholars to engage with such approaches They examine points of terminological or theoretical confusion that create unnecessary barriers to engagement between constructivists and nonconstructivist work and among different types of constructivism This book provides a tool kit that both constructivists and their critics can use to debate how much and when social construction matters in this deeply important realm
