The Continuum Concept Jean Liedloff, 1975 **The Continuum Concept** Jean Liedloff, 1995 *The Case Against Adolescence* Robert Epstein, 2007 This groundbreaking book argues that adolescence is an unnecessary period of life that people are better off without Robert Epstein former editor in chief of Psychology Today shows that teen turmoil is caused by outmoded systems put into place a century ago which destroyed the continuum between childhood and adulthood Where this continuum still exists in other countries there is no adolescence Isolated from adults American teens learn everything they know from their media dominated peers the last people on earth they should be learning from says Epstein Epstein explains that our teens are highly capable in some ways more capable than adults and argues strongly against infantilizing young people We must rediscover the adult in every teen he says by giving young people adult authority and responsibility as soon as they can demonstrate readiness This landmark book will change the thinking about teens for decades to come

Partial Differential Equations in Mechanics 2 A.P.S. Selvadurai, 2013-06-29 For he who knows not mathematics cannot know any other sciences what is more he cannot discover his own ignorance or find its proper remedies Opus Majus Roger Bacon 1214 1294 The material presented in these monographs is the outcome of the author's long standing interest in the analytical modelling of problems in mechanics by appeal to the theory of partial differential equations The impetus for writing these volumes was the opportunity to teach the subject matter to both undergraduate and graduate students in engineering at several universities The approach is distinctly different to that which would adopted should such a course be given to students in pure mathematics in this sense the teaching of partial differential equations within an engineering curriculum should be viewed in the broader perspective of

The Modelling of Problems in Engineering An engineering student should be given the opportunity to appreciate how the various combination of balance laws conservation equations kinematic constraints constitutive responses thermodynamic restrictions etc culminates in the development of a partial differential equation or sets of partial differential equations with potential for applications to engineering problems This ability to distill all the diverse information about a physical or mechanical process into partial differential equations is a particular attraction of the subject area
