Once drunk, half of the fluoride in the 4% drinking water is excreted. Only a tiny percentage of the other half of the fluoride bio-accumulates in the bodies of the fluoridation target group – small disadvantaged children.

Assuming that this tiny percentage is 0.3% of the total fluoride supplied, 99.7% of the fluoridating acid (and, consequently, 99.7% of the financial outlay) are completely wasted.

If a local authority spends £100,000 pa on water fluoridation, £99,700 goes down the drain.

Public money is being wasted because of an outdated, inefficient public health policy.
