Empty-Base Explanation Yannic Kappes, 2023-08-07 This book develops and applies a novel kind of explanation Empty Base Explanation While ordinary explanations have a tripartite structure involving an explanandum a base of reasons why the explanandum obtains and a link that connects the reasons to the explanandum this book argues that there are explanations whose corresponding set of reasons is empty This novel idea is located in the theoretical background of several fundamental philosophical issues For example it provides a convincing kind of ultimate or final explanation that completely and conclusively explains a phenomenon without involving other phenomena for which further explanations could be demanded The possibility and fruitfulness of empty base explanation is defended by general considerations from the theory of explanation as well as concrete applications to the practice of explanation by status the explanation of logical theorems causal connections and laws of nature self explanation the use of IBE in metaphysics the notion of zero ground which it provides with a solid theoretical footing and ultimate explanation and its application to philosophical cosmology the debate about the PSR and the question of why there is

It is expected that this new joint conference will take place every two years. In view of the three sponsoring Working Groups, there were three separate tracks, one per Working Group. Each track was handled by a different co-chairman. Specifically, the track of Working Group 6.2 was handled by Ulf Körner, the track of Working Group 6.3 was handled by Ioannis Stavrakakis, and the track of Working Group 6.4 was handled by Serge Fdida. Declarative Networking Boon Thau Loo, Wenchao Zhou, 2022-05-31 Declarative Networking is a programming methodology that enables developers to concisely specify network protocols and services which are directly compiled to a dataflow framework that executes the specifications. Declarative networking proposes the use of a declarative query language for specifying and implementing network protocols and employs a dataflow framework at runtime for communication and maintenance of network state. The primary goal of declarative networking is to greatly simplify the process of specifying, implementing, deploying, and evolving a network design. In addition, declarative networking serves as an important step towards an extensible, evolvable network architecture that can support flexible, secure, and efficient deployment of new network protocols. This book provides an introduction to basic issues in declarative networking, including language design, optimization, and dataflow execution. The methodology behind declarative programming of networks is presented, including roots in Datalog extensions for networked environments and the semantics of long-running queries over network state. The book focuses on a representative declarative networking language called Network Datalog (NDlog), which is based on extensions to the Datalog recursive query language. An overview of declarative network protocols written in NDlog is provided, and its usage is illustrated using examples from routing protocols and overlay networks. This book also describes the implementation of a declarative networking engine and NDlog execution strategies that provide eventual consistency semantics with significant flexibility in execution. Two representative declarative networking systems, P2 and its successor RapidNet, are presented. Finally, the book highlights recent advances in declarative networking and new declarative approaches to related problems.
