The Changing Distribution of Earnings in OECD Countries A B Atkinson, 2008-05-01 This book is about how much people earn and why the distribution of earnings has been changing over time The gap between the top and bottom in the United States has widened significantly since 1980 Why has this happened Is it due to new technologies What is the role of globalisation Are there historical precedents The book begins with the race between technology and education and shows that continuing technical progress does not necessarily imply a continuing rise in dispersion It then examines the experience of 20 OECD countries over the twentieth century material presented in the form of 20 country case studies The book breaks new ground in assembling data on the distribution of individual earnings covering much of the twentieth century and drawing on a variety of under exploited sources The findings overturn a number of widely held beliefs It is not the earnings of the low paid that have been most affected by the recent changes widening is largely due to what is happening at the top The recent rise in earnings dispersion is not unprecedented but should be seen as part of a longer run history of successive compression and expansion of earnings differences
