Social Cognition And Individual Change:

Social Cognition and Individual Change Aaron M. Brower, Paula Nurius, 1993-10-19 This clearly written book provides an introduction to a cognitive ecological approach to counselling and clinical practice The authors examine theoretical underpinnings and key components and discuss the strengths and limitations of the approach They present examples that show practitioners how the model can enhance work with clients and apply it to relevant stages of practice including assessment goal setting and intervention planning

Variability and Individual Differences in Early Social Perception and Social Cognition Jessica Sommerville, Alia Martin, Talee Ziv, 2016-06-10 Over the past three decades mounting evidence has suggested that infants social perceptual and social cognitive abilities are considerably richer than was once thought By the end of the second year of life infants discriminate faces along various social dimensions attend to and understand others goals and intentions use the emotions of others to guide their learning and behavior attribute dispositional characteristics to other agents and make basic social evaluations What has also become clear is that there is a great deal of variability in infants social perception and cognition A critical outstanding question concerns the nature and meaning of such variability The proposed Research Topic welcomes papers addressing cutting edge questions regarding variability and individual differences in early social perception and social cognition The goal of these papers is to investigate overarching questions in this domain which are necessary to move the field forward Variability in early social perception and social cognition among other domains in infancy and early childhood is often attributed to noise or overlooked in favor of focusing on age related changes Yet recent work suggests that variability in social perceptual and social cognitive tasks reliably inter relates and predicts real world social behaviors For example infants everyday experience with different face categories predicts individual differences in face processing infants production of goal directed actions predicts their simultaneous understanding of these actions and variability in social attention during the second year of life is related to theory of mind during the preschool years These findings suggest that variability in performance on social perception and social cognition tasks is not merely a nuisance variable but rather may provide the key to addressing significant questions regarding the nature of infants social perception and social cognition and the processes that underlie developmental change Acknowledging and closely examining and investigating variability in early social perceptual and social cognitive abilities may represent a powerful approach for understanding development in at least two ways First variability can signal transitional points in the developmental onset of a given ability Thus such variability and the extent to which variability relates to experience and or other abilities can be used to test hypotheses regarding mechanisms that underlie developmental changes Second variability can represent more enduring individual differences between infants In this case critical questions arise regarding the source of individual differences that is what factors shape the emergence of individual differences and whether such early individual differences contribute to the development of more advanced and sophisticated

forms of social cognition and behavior The goal of this Research Topic will be to encourage researchers to take variability in early social perception and cognition seriously Papers that give variability center stage and are aimed at addressing the value of variability for identifying developmental mechanisms as well as investigating the existence source and antecedents of early individual differences in social perception and social cognition are welcomed Taken together the contributed papers will provide integral new information to the study of social perception and social cognition over the first three years of life

Investigating the Role of Emotions, Self-Centered Motives, and Social Norms* Corrado Corradi-Dell'Acqua,Leonie Koban,Susanne Leiberg,Patrik Vuilleumier,Ernst Fehr,2016-09-28 Human behavior and decision making is subject to social and motivational influences such as emotions norms and self other regarding preferences The identification of the neural and psychological mechanisms underlying these factors is a central issue in psychology behavioral economics and social neuroscience with important clinical social and even political implications However despite a continuously growing interest from the scientific community the processes underlying these factors as well as their

ontogenetic and phylogenetic development have so far remained elusive In this Research Topic we collect articles that provide challenging insights and stimulate a fruitful controversy on the question of what determines social behavior Indeed over the last decades research has shown that introducing a social context to otherwise abstract tasks has diverse effects on social behavior On the one hand it may induce individuals to act irrationally for instance to refuse money but on the other hand it improves individuals reasoning in that formerly difficult abstract problems can be easily solved These lines of research led to distinct although not necessarily mutually exclusive models for socially driven behavioral changes For instance a popular theoretical framework interprets human behavior as a result of a conflict between cognition and emotion with the cognitive system promoting self interested choices and the emotional system triggered by the social context operating against them Other theories favor social norms and deontic heuristics in biasing human reasoning and encouraging choices that are sometimes in conflict with one's interest Few studies attempted to disentangle between these as well as other models As a consequence although insightful results arise from specific domains tasks a comprehensive theoretical framework is still missing Furthermore studies employing neuroimaging techniques have begun to shed some light on the neural substrates involved in social behavior implicating consistently although not exclusively portions of the limbic system the insular and the prefrontal cortex In this context a challenge for present research lies not only in further mapping the brain structures implicated in social behavior or in describing in detail the functional interaction between these structures but in showing how the implicated networks relate to different theoretical models This is Research Topic hosted by members of the Swiss National Center of Competence in Research Affective Sciences Emotions in Individual Behaviour and Social Processes We collected contributions from the international community which extended the current knowledge about the psychological and neural structures underlying social behavior and decision making In particular we encouraged submissions from investigators arising from different domains psychology behavioral economics affective sciences etc implementing different techniques behavior electrophysiology neuroimaging brain stimulations on different populations neurotypical adults children brain damaged or psychiatric patients etc Animal studies are also included as the data reported are of high comparative value Finally we also welcomed submissions of meta analytical articles mini reviews and perspective papers which offer provocative and insightful interpretations of the recent literature in the field

Towards an embodied science of intersubjectivity: Widening the scope of social understanding research Ezequiel Di Paolo, Hanne De Jaegher, 2015-06-16 An important amount of research effort in psychology and neuroscience over the past decades has focused on the problem of social cognition This problem is understood as how we figure out other minds relying only on indirect manifestations of other people's intentional states which are assumed to be hidden private and internal Research on this question has mostly investigated how individual cognitive mechanisms achieve this task A shift in the internalist assumptions regarding intentional states has expanded the research focus with hypotheses that explore the role of

interactive phenomena and interpersonal histories and their implications for understanding individual cognitive processes. This interactive expansion of the conceptual and methodological toolkit for investigating social cognition we now propose can be followed by an expansion into wider and deeply related research questions beyond but including that of social cognition narrowly construed. Our social lives are populated by different kinds of cognitive and affective phenomena that are related to but not exhausted by the question of how we figure out other minds. These phenomena include acting and perceiving together, verbal and non verbal engagement, experiences of disconnection, management of relations in a group, joint meaning making, intimacy, trust, conflict, negotiation, asymmetric relations, material mediation of social interaction, collective action, contextual engagement with socio cultural norms, structures and roles etc. These phenomena are often characterized by a strong participation by the cognitive agent in contrast with the spectatorial stance typical of social cognition research. We use the broader notion of embodied intersubjectivity to refer to this wider set of phenomena. This Research Topic aims to investigate relations between these different issues to help lay strong foundations for a science of intersubjectivity, the social mind writ large. To contribute to this goal we encouraged contributions in psychology, neuroscience, psychopathology, philosophy and cognitive science that address this wider scope of intersubjectivity by extending the range of explanatory factors from purely individual to interactive, from observational to participatory.

When (and How) Theory of Mind Is Useful? Evidences from Research in the Life-Span Francesca Baglio, Antonella Marchetti, 2017-02-17

Theory of Mind ToM or mentalization is the ability to understand and foresee the behavior referring to one's own and others' mental states. Premack Wimmer Perner 1983. This capacity which is considered the most representative mechanism of social cognition is a multifaceted set of competences liable to influence and be influenced by a manifold of psychosocial aspects. Studies on typical and atypical clinical development during life showed that ToM is frequently delayed e.g. in deafness or impaired in many clinical conditions e.g. Autism Spectrum Disorder, Attention Deficit Hyperactivity Disorder, Schizophrenia, Borderline Personality Disorder, Parkinson's Disease, Alzheimer's Disease and on the other hand may not be unequivocally a positive experience. It is therefore possible to consider the existence of multiple kinds of Theory of Mind. In fact ToM may vary along a quantitative and a qualitative continuum. As for the quantitative dimension the continuum is constituted by the fluctuation between high and low levels of ToM ability in different clinical conditions. Along this continuum impairment can mean not enough ToM for example in Autism Spectrum Disorder as well as too much ToM for example in Schizophrenia and Borderline Personality Disorder. The qualitative dimension highly interrelated with the quantitative one regards the shift between adaptive e.g. prosocial nice ToM vs unadaptive e.g. antisocial nasty ToM, mental states content. The issue is discussed in light of recent evidence from outstanding researchers working on typical and atypical clinical populations along the life span. Findings from the fields of psychology, neuropsychology and neuroscience enrich the research topic argumentation.

Understanding Prejudice, Racism, and Social Conflict Martha Augoustinos, Katherine Jane Reynolds, 2001-09-25 This book stands out for a number of reasons the result is an authoritative provocative and challenging collection which will doubtless help to stimulate further debate in the field Susan Condor Department of Psychology Lancaster University The authors are to be commended for assembling an unusually stimulating collection of chapters the book is clearly distinguished by the breadth of its coverage and the theoretical insights it offers It is a valuable addition to any collection on this topic Jack Dovidio Department of Psychology Colgate University This is a comprehensive text that is extremely well written by top social psychologists with all of the major theoretical perspectives represented The editors should be commended for putting together this lively and engaging text Nyla Branscombe Department of Psychology University of Kansas A range of international events have recently focused attention on issues of prejudice racism and social conflict increasing tensions in former Eastern bloc countries political conflict in Northern Ireland and the United States as well as racial conflict in the Baltic States Middle East Africa and Australasia In light of these events Understanding Prejudice Racism and Social Conflict presents a timely and important update to the literature and makes a fascinating textbook for all students who need to study the subject A variety of theoretical and conceptual approaches are necessary to fully understand the themes of prejudice and racism This textbook successfully presents these uniquely by examining how these themes manifest themselves at different levels at the individual interpersonal intergroup and institutional levels It aims to integrate the different approaches to understanding racism and prejudice and to suggest new ways to study these complex issues This integrated international focus should make it key reading for students in many countries With contributions from world leading figures Understanding Prejudice Racism and Social Conflict should prove to be an invaluable teaching resource and an accessible volume for students in social psychology as well as some neighbouring disciplines
