*The Hunt for the Last Respondent* Ineke A. L. Stoop, 2005 Non response in sample surveys can have serious consequences on the accuracy of survey results This study shows how high response rates can be achieved even in the Netherlands a country notorious for its low response rates As an introduction an overview of groups that generally have low response rates and the possible causes of their lack of response is presented The emphasis is on non response bias that occurs when non response behavior and survey outcomes are correlated independent of background characteristics The Hunt for the Last Respondent will be of interest to survey methodologists market researchers survey sponsors and survey statisticians as well as anyone interested in survey quality

Massey, Roger Tourangeau, 2012-12-28 Surveys are the principal source of data not only for social science but for consumer research political polling and federal statistics In response to social and technological trends rates of survey nonresponse have risen markedly in recent years prompting observers to worry about the continued validity of surveys as a tool for data gathering Newspaper stories magazine articles radio programs television broadcasts and Internet blogs are filled with data derived from surveys of one sort or another Reputable media outlets generally indicate whether a survey is representative but much of the data routinely bandied about in the media and on the Internet are not based on representative samples and are of dubious use in making accurate statements about the populations they purport to represent Surveys are social interactions and like all interactions between people they

are embedded within social structures and guided by shared cultural understandings This issue of The ANNALS examines the difficulties with finding willing respondents to these surveys and how the changing structure of society whether it be the changing family structure mass immigration rising inequality or the rise of technology has presented new issues to conducting surveys This volume will be of interest to faculty and students who specialize in sociological movements as well as economic and immigration movements and its effect on surveying

workers from Switzerland who lost their manufacturing jobs after the financial crisis of 2008 the author analyzes the determinants of reemployment the sector of reemployment and the change in wages over a two year period In addition coverage also explores how plant closure affects the social relationship between a displaced worker and his or her significant other which includes a discussion of the coping strategies on the household level as well as how changes in a worker s social and occupational life affects overall satisfaction Readers will discover that the burden of structural change disproportionately falls on the shoulders of workers aged 55 and older who often face substantial barriers when trying to return to employment A larger portion of this group experience long term unemployment and those who do manage to find a new job often suffer disproportionate wage loss This result is intriguing in the context of the current demographic change and contradicts the common assumption that young and low qualified individuals are at greatest risk of unemployment Advanced age and not low education appears to be the primary obstacle to workers finding job satisfaction after being laid off because of market conditions
