With(Out) Trace: Interdisciplinary Investigations into Time, Space and the Body
Simon Dwyer, Rachel Franks, Reina Green, 2019-07-22. This volume was first published by Interdisciplinary Press in 2015. This book, *With out Trace: Interdisciplinary Investigations into Time, Space and the Body*, unpacks many of the issues that surround the idea of trace: what we intentionally and unintentionally leave behind, as well as how trace can help us to move forward. In particular, this volume looks at how an interdisciplinary approach can suggest new ways of seeing and subsequently exploring interconnections between time, space, and the body. The papers within this work accomplish more than tracing a theme; a theory or discipline within the study of time, space, and the body. Moreover, the collection does not simply trace past debates about the relationship between the three. Indeed, the interdisciplinarity of this collection will, it is hoped, suggest other ways of seeing the field and of tracing new paths through it. Exploring those new perspectives and new paths will undoubtedly enrich future thinking about the interconnections between time, space, and the body. *Robotic Tactile Perception and Understanding*. Huaping Liu, Fuchun Sun, 2018-03-20. This book introduces the challenges of robotic tactile perception and task understanding and describes an advanced approach based on machine learning and sparse coding techniques. Further, a set of structured sparse coding models is developed to address the issues of dynamic tactile sensing. The book then proves that the proposed framework is effective in solving the problems of multi-finger tactile object recognition, multi-label tactile adjective recognition, and multi-category material analysis, which are all challenging practical problems in the fields of robotics and automation. The proposed sparse coding model can be used to tackle the challenging visual tactile fusion recognition problem, and the book develops a series of efficient optimization algorithms to implement the model. It is suitable as a reference book for graduate students with a basic knowledge of machine learning, as well as professional researchers interested in robotic tactile perception and understanding and machine learning.
