The Industrial Enterprise And Its Environment Spatial Perspectives Organization Of Industrial Space S:

Learning Organizations Ariane Berthoin Antal, Peter Meusburger, Laura Suarsana, 2013-11-19 This book is designed to extend the field of organizational learning in several ways The contributors from three continents bring different perspectives on processes and outcomes of knowledge creation and sharing in and between organizations in diverse contexts They use approaches and concepts from numerous disciplines including the arts economics geography organizational studies psychology and sociology The contributions enrich the spatial turn in organization studies by offering fresh insights for researchers who seek to attend to the contextual dimensions of the phenomena they are studying They provide examples of organizational places and spaces that have not yet received sufficient attention as diverse as temporary international organizations and computer screens

Knowledge, Space, Economy John Bryson, Peter Daniels, Nick Henry, Jane Pollard, 2002-01-04 We are now living through a period of knowledge capitalism in which as Castells put it the action of knowledge upon knowledge is the main source of productivity In the face of such transformation the economic social and institutional contours of contemporary capitalism are being reshaped At the heart of this world are an emergent set of economies regions institutions and peoples central of the flows and translations of knowledge This book provides an interdisciplinary review of the triad of knowledge space economy on entering the twenty first century Drawing on a variety of disciplinary backgrounds the first part of the book comprises a set of statements by leading authors on the role of knowledge in capitalism Thereafter the remaining two parts of the book explore the landscape of knowledge capitalism through a series of analyses of knowledge in action within a range of economic political and cultural contexts Bringing together a set of authors from across the social sciences this book provides both a major theoretical statement on understanding the economic world and an empirical exemplification of the power of knowledge in shaping the spaces and places of today s society

Embedded Enterprise and Social Capital Simon Leonard, 2017-11-22 This title was first published in 2002 The concept of embeddedness refers to the social construction of inter firm relationships and the enmeshing of economic relationships within broader social structures and relationships in particular places Previous research has suggested embedding is the best way to generate local growth and social capital and has focused on SMEs in Europe and North America although the existing model is being more widely adopted now This volume is the first to examine the complex processes of embedding in this wider context Bringing together a broad range of case studies from the developed and developing world which address the nature of embeddedness from various perspectives it not only questions the universality of the current model and the policy initiatives it has spawned but also provides a much wider understanding of embeddedness It does so by discussing the social dimensions more fully and by throwing light on the spatial and temporal ambiguity of the concept and its inadequate treatment of power

The Industrial Enterprise and Its Environment Sergio Conti, Edward J. Malecki, Päivi Oinas, 1995 The volume has three main objectives to illustrate the trends of theoretical analysis in contemporary industrial geography to

establish the strategic central role of company spatial behaviour through the understanding of new theories developed in the framework of managerial sciences and theoretically and conceptually advanced in industrial geography to reconceptualise in terms of complex systems theory the dynamic of industrial enterprise World Scientific Reference On Entrepreneurship, The (In 4 Volumes) ,2016-12-28 This multi volume set focuses on a topic of growing interest to academics policymakers university administrators state and regional economic development officials and students entrepreneurship In recent years we have witnessed a proliferation of entrepreneurship courses programs and initiatives at universities Universities have also become entrepreneurial hubs as they commercialize research via patents licenses and startup companies It is also important to note that entrepreneurship cuts across numerous fields in business administration such as management strategy operations management finance marketing and accounting as well as across numerous social science disciplines including economics sociology political science and psychology Volume 1 is a comprehensive analysis of entrepreneurial universities highlighting efforts undertaken by numerous universities to partner with industry and develop an entrepreneurial culture on campus and in the surrounding region Volume 2 is focused on entrepreneurial finance containing chapters on salient topics such as venture capital angel investors initial public offerings IPOs and crowdfunding Volume 3 presents evidence on entrepreneurial opportunities relating to sustainability and other forms of corporate social responsibility social entrepreneurship and ethical issues that arise in the context of entrepreneurial activity Volume 4 provides global evidence on university technology transfer and academic entrepreneurship This set is required reading for those who want a full understanding of the managerial financial and public policy implications of entrepreneurship *The Large Industrial Enterprise* H.D. Watts,2018-01-12 Large industrial enterprises are an important phenomena in advanced Western economies They control large percentages of total industrial assets employ millions of workers and together with their dependent satellite firms produce their own spatial patterns of employment location of production capacity and flow of material and information and thus dominate the economic base of whole towns This study first published in 1980 surveys a massive amount of work on large industrial firms and features an in depth study of the growth of large industrial enterprises in the UK brewing industry from 1951 76 This illustrates many of the themes discussed in the book **Understanding the Firm** Michael Taylor,Päivi Oinas,2006-12-21 Firms are at the very heart of modern day life They come in a seemingly infinite variety from transnationals to small firm from corporations to branch plants to subsidiaries and joint ventures from subcontractors to franchisees from sole proprietorships to partnerships from manufacturers to service providers and retailers For the most part we view them as the creators destroyers and repositories of jobs the creators and destroyers of people s livelihoods lives and dreams But deciding just what a firm is is neither a simple nor a straightforward task Against a background of the dynamic complexity and plurality that business forms and firms can assume there is a constant search within academic research for the processes that create and maintain both enterprise and enterprises in capitalist societies a

search for a theory of the firm This book addresses some of the gaps in the current state of the theory of the firm from an economic geography perspective issues around the boundaries of the firm the collective agency of the firm the political firm financial markets and the state and the firm in place The American Reaper Gordon M. Winder, 2016-04-01 The American Reaper adopts a network approach to account for the international diffusion of harvesting technology from North America from the invention of the reaper through to the formation of a dominant transnational corporation International Harvester Much previous historical research into industrial networks focuses on industrial districts within metropolitan centres but by focusing on harvesting a typically rural technology this book is able to analyse the spread of technological knowledge through a series of local networks and across national boundaries In doing so it argues that the industry developed through a relatively stable stage from the 1850s into the 1890s during which time many firms shared knowledge within and outside the US through patent licensing to spread the diffusion of the American style of machines to establishments located around the industrial world This positive cooperation was further enhanced through sales networks that appear to be early expressions of managerial firms The book also reinterprets the rise of giant corporations especially International Harvester Corporation IHC arguing that mass production was achieved in Chicago in the 1880s where unprecedented urban growth made possible a break with the constraints felt elsewhere in the dispersed production system It unleashed an unchecked competitive market economy with destructive tendencies throughout the transnational American reaper networks a previously stable and expanding production system This is significant because the rise of corporate capital in this industry is usually explained as an outworking of national natural advantage as an ingenious harnessing of science and technology to solve production problems and as a rational solution to the problems associated with the worst forms of unregulated competition that emerged as independent firms developed from small scale artisanal production to large scale manufacturers on their own and within the separate and isolated US economy The first study dedicated to the development and diffusion of American harvesting machine technology this book will appeal to scholars from a diverse range of fields including economic history business history the history of knowledge transfer historical geography and economic geography New Metropolitan Perspectives Francesco Calabrò, Lucia Della Spina, Carmelina Bevilacqua, 2018-05-18 This book explores the role of cities and the urban rural linkages in spurring innovation embedded in spatial planning strategic and economic planning and decision support systems In particular the contributions examine the complexity of the current transitional phase towards achieving smart inclusive and sustainable growth and investigate the post 2020 UE cohesion policy The main topics include Innovation dynamics and smart cities Urban regeneration community led and PPP Inland and urban area development Mobility accessibility infrastructures Heritage landscape and Identity and Risk management Environment and Energy The book includes a selection of articles accepted for presentation and discussion at the 3rd International Symposium New Metropolitan Perspectives ISTH2020 held at the University of Reggio Calabria Italy on 22-25 May 2018 The symposium

which addressed the challenge of local knowledge and innovation dynamics towards territory attractiveness hosted the final event of the MAPS LED project under Horizon2020 MSCA RISE Global Competition and Local Networks Rod B. McNaughton, 2018-02-06 This title was first published in 2002 The interest in becoming globally competitive through network strategies particularly networks between small and medium sized firms in local business communities is high among academic researchers economic development agencies and growth orientated firms Important contributions to our understanding of the strategic use of networks are coming from a number of disciplinary and theoretical perspectives This volume provides a unique opportunity to both synthesize this diverse literature and report the results of original research It is particularly relevant to scholars of business and management geography and economics *Reflections and Extensions on Key Papers of the First Twenty-Five Years of Advances* Jerome A. research frontiers such as at the intersection of cluster theory and agglomeration processes knowledge spillovers and technology transfer not to mention the obvious link to economic development theory policy and practice Roger R Stough George Mason University US This eclectic volume presents a host of methods to describe tendencies for the joint location of economic agents in space And it illustrates useful applications of these concepts in diverse fields financial services culture tourism and industry to name just a few John M Quigley University of California US Clusters have increasingly dominated local and regional development policies in recent decades and the growing intellectual and political interest for clusters and clustering is the prime motivation for this Handbook Charlie Karlsson unites leading experts to present a thorough overview of economic cluster research Topics explored include agglomeration and cluster theory methods for analysing clusters clustering in different spatial contexts and clustering in service industries Encompassing the developed economies of Europe and North America the Handbook provides a basis for improving cluster policy formulation interpretation and analyses This comprehensive overview of research on economic clusters will be of interest to scholars and PhD students in regional economics economic geography regional planning and management as well as practitioners and policymakers at the national regional and local levels involved in cluster formation and cluster management **Global City-Regions** Allen J.

Scott,2001-01-25 There are now more than three hundred city regions around the world with populations greater than one million These city regions are expanding vigorously and they present many new and deep challenges to researchers and policy makers in both the more developed and less developed parts of the world The processes of global economic integration and accelerated urban growth make traditional planning and policy strategies in these regions increasingly inadequate while more effective approaches remain largely in various stages of hypothesis and experimentation Global City Regions represents a multifaceted effort to deal with the many different issues raised by these developments It seeks at once to define the question of global city regions and to describe the internal and external dynamics that shape them it proposes a theorization of global city regions based on their economic and political responses to intensifying levels of globalization and it offers a number of policy insights into the severe social problems that confront global city regions as they come face to face with an economically and politically neoliberal world At a moment when globalization is increasingly subject to critical scrutiny in many different quarters this book provides a timely overview of its effects on urban and regional development one of its most important but perhaps least understood corollaries The book also offers a series of nuanced visions of alternative possible futures Knowledge Networks and Tourism Michelle McLeod,Roger Vaughan,2014-11-20 The receipt of knowledge is a

key ingredient by which the tourism sector can adjust and adapt to its dynamic environment However although its importance has long been recognised the fragmentation within the sector largely as a result of it being comprised of small and medium sized businesses makes understanding knowledge management challenging This book applies knowledge management and social network theories to the business of tourism to shed light on successful operations of tourism

knowledge networks It contributes specifically to understanding a network perspective of the tourism sector the information needs of tourism businesses social network dynamics of tourism business operation knowledge flows within the tourism sector and the transformation of the tourism sector through knowledge networks Social Network Analysis is applied to fully explore the growth and maintenance of tourism knowledge networks and the relationships between tourism sector stakeholders in relation to their knowledge requirements Knowledge Networks and Tourism will be valuable reading for all those interested in successful operations of tourism knowledge networks Business and Non-profit Organizations Facing Increased Competition and Growing Customers' Demands Adam Nalepka, Anna Ujwary-Gil, 2018 We are pleased to introduce our 17th and latest volume from our regular conference Business and Non profit Organizations Facing Increased Competitions and Growing Customers Demands which contains articles highlighting the problems of contemporary for profit and non profit organizations The added value is the inclusion of multifaceted aspects of an organization s functioning including the sectoral and industrial view The diversity of the approach to the problems of organization management business and economy becomes a valuable interdisciplinary view of the economic reality that surrounds us The monograph is divided into four sections In the first section Business and non profit organizations as the objects of research articles are exposing the area of strategic management including a museum as a research object surgical workflow the performance of cultural organizations and organizational forms of housing resource management In addition this section covers a process oriented view of management including process maturity of the organization and process approach to the analysis of creative capital and mixed project management methodology In a separate thread there are articles related to public university mergers based on an example of two academic case studies the analysis of scientific excellence as a factor influencing academic involvement and the nature of competition for non profit and for profit organizations The second section entitled Modern tools for business and non profit organization management opens with an article on design thinking and the TransistorsHead tool used to analyze teams through organizational terms Other tools used in eye tracking such as enova365 and Soneta are presented in an article on the optimization of an IT system In the context of profiling scientific research not only in the area of academic entrepreneurship but also in the search for research gaps bibliometrics is undoubtedly a useful tool discussed in a further article In another article an attractive tool for competence analysis is the business model and the construction of the competence assessment method which could prove to be helpful in assessing the effectiveness of professional careers Other articles in this section feature the concept of innovation and knowledge management medical data management based on a precise legal basis external financing and its impact on the flexibility of enterprises and a systemic process and resource approach to port modularity In the next section Business and non profit organizations in a market economy the primary thematic topic is corporate social responsibility client capital creation and social entrepreneurship We note the greater emphasis on the social aspects of the organization s functioning and on the social economy The human

Geography, Institutions and Regional Economic Performance
Riccardo Crescenzi, Marco Percoco, 2012-12-13 The book aims to present traditional features of regional science as geographical concepts and institutions as well as relatively new topics such as innovation and agglomeration economies In particular it demonstrates that contrary to what has been argued by recent economics literature both geography and institutions or culture are relevant for local development In fact these phenomena along with the movement of goods and workers are among the main reasons for persisting development differentials These intriguing relationships are at the heart of the analysis presented in this book and form the conceptual basis for a promising institutional approach to economic geography
