book is to demonstrate how the isotope composition of Sr Nd Pb and O in igneous rocks has been used to shed light on the origin of igneous rocks and hence on the activity of the mantle and on its interactions with the continental and oceanic crust The presentations are based on the premise that igneous and metamorphic rocks form as a direct consequence of the dynamic processes of the mantle and of the resulting interactions between the mantle and the crust Accordingly Chap 2 to 6 examine specific types of igneous rocks that form in particular tectonic settings Each of these chapters starts with questions about the properties of the mantle and crust and about the relation between the tectonic setting and the rock forming processes that take place in that setting
