Translucent Building Skins Scott Murray, 2013-05-07 Exploring the design of innovative building enclosure systems or skins in contemporary architecture and their precedents in earlier twentieth century modern architecture this book examines the tectonics the history and the influence of translucency as a defining characteristic in architecture Highly illustrated throughout with drawings and full colour photographs the book shows that translucency has been and continues to be a fertile ground for architectural experimentation Each chapter presents a comparative analysis of two primary buildings a recent project paired with a historical precedent highlighting how architects in different eras have realized the distinctive effects of translucency The included buildings span a variety of program types ranging from a single family residence to a factory to a synagogue Whether it is Pierre Chareau's glass lens curtain wall at the Maison de Verre Frank Lloyd Wright's wall of stacked glass tubes at the Johnson Wax Research Tower or Peter Zumthor's use of acid etched glass in a double skin envelope at the Kunsthaus Bregenz the included projects each offer an exemplary case study of innovations in materiality and fabrication techniques Today among many contemporary architects there is an engagement with new technologies new material assemblies and new priorities such as sustainability and energy efficiency A resurgent interest in translucency as a defining quality in buildings has been an important part of this recent dialogue and this book makes essential reading for any architect looking to incorporate aspects of translucency into their buildings

Architecture under Construction Stanley Greenberg, 2010-04-15 Mies van der Rohe once commented Only skyscrapers under construction reveal their bold constructive thoughts and then the impression made by their soaring skeletal frames is overwhelming Never has this statement resonated more than in recent years when architectural design has undergone a radical transformation and when powerful computers allow architects and engineers to design and construct buildings that were impossible just a few years ago At the same time what lies underneath these surfaces is more mysterious than ever before In *Architecture under Construction* photographer Stanley Greenberg explores the anatomy and engineering of some of our most unusual new buildings helping us to understand our own fascination with what makes buildings stand up and what makes them fall down As designs for new constructions are revealed and the public watches closely as architects and engineers challenge each other with provocative new forms and equally audacious ideas Greenberg captures penetrating images that reveal the complex mystery and beauty found in the transitory moments before the skin of a building covers up the structures that hold it together Framed by a historical and critical essay by Joseph Rosa and including an afterword by

the author the eighty captivating and thought provoking images collected here which focus on some of the most high profile design projects of the past decade including buildings designed by Norman Foster Frank Gehry Steven Holl Daniel Libeskind Thom Mayne and Renzo Piano among others are not to be missed by anyone with an eye for the almost invisible mechanisms that continue to define our relationship with the built world Modern Architecture and Other Essays Vincent Scully, 2003

Siry, 2021-02-01 Air Conditioning in Modern American Architecture 1890 1970 documents how architects made environmental technologies into resources that helped shape their spatial and formal aesthetic In doing so it sheds important new light on the ways in which mechanical engineering has been assimilated into the culture of architecture as one facet of its broader modernist project Tracing the development and architectural integration of air conditioning from its origins in the late nineteenth century to the advent of the environmental movement in the early 1970s Joseph M Siry shows how the incorporation of mechanical systems into modernism's discourse of functionality profoundly shaped the work of some of the movement's leading architects such as Dankmar Adler Louis Sullivan Frank Lloyd Wright Ludwig Mies van der Rohe Gordon Bunshaft and Louis Kahn For them the modernist ideal of functionality was incompletely realized if it did not wholly assimilate heating cooling ventilating and artificial lighting Bridging the history of technology and the history of architecture Siry discusses air conditioning's technical and social history and provides case studies of buildings by the master architects

Interior Design ,1971-07 Architecture and the Modern Hospital Julie Willis,Philip Goad,Cameron Logan,2018-10-09 More than any other building type in the twentieth century the hospital was connected to transformations in the health of populations and expectations of lifespan From the scale of public health to the level of the individual the architecture of the modern hospital has reshaped knowledge about health and disease and perceptions of bodily integrity and security However the rich and genuinely global architectural history of these hospitals is poorly understood and largely forgotten This book explores the rapid evolution of hospital design in the twentieth century analysing the ways in which architects and other specialists reimagined the modern hospital It examines how the vast expansion of medical institutions over the course of the century was enabled by new approaches to architectural design and it highlights the emerging political conviction that physical health would become the cornerstone of human welfare **Michigan Modern** Amy Arnold,Brian Conway,2016-10-04
