## **Sky Catalogue 2000:**

**Sky Catalogue 2000** Alan Hirshfeld, Roger W. Sinnott, Francois Ochsenbein, 1991-11-01 **Stars to Magnitude 8.0**  
Roger W. Sinnott, 1982 Re issue of a standard reference work for amateur astronomers who observe with telescopes available again in response to many requests *Sky Catalogue 2000.0: Volume 1* Alan Hirshfeld, Roger W. Sinnott, Francois Ochsenbein, 1991-11-29 The one stop reference book for hard information on the brighter stars **Illustrated Dictionary of Practical Astronomy** C. R. Kitchin, 2002-07-11 A unique dictionary of astronomy specifically written for practical amateur astronomers In addition to definitions it provides an invaluable reference source for terms techniques instruments formulas and processes for practising observers both amateur and professional A special feature of this dictionary is extended definitions for many topics they give sufficient information for many of the techniques and items of instrumentation to be used as well as understood With over 200 illustrations and extensive appendices this is an essential reference book for every astronomer *Planetary Nebulae and How to Observe Them* Martin Griffiths, 2012-03 This book is for amateur astronomers who want to go beyond the Messier objects concentrating on one of the most beautiful classes of astronomical object It describes over 100 nebulae personally observed by the author using telescopes of various sizes *Telescopes and Techniques* C. R. Kitchin, 2012-12-06 The modern aspiring astronomer is faced with a bewildering choice of commercially produced telescopes including all the designs considered in the preceding chapter Yet only four decades ago the choice for a small telescope would have been between just a refractor and a Newtonian reflector That change has come about because of the enormous interest that has grown in astronomy since the start of the space age and with the mind boggling discoveries of the past 30 or 40 years Except for some of the very small instruments which are unfortunately often heavily promoted in general mail order catalogues camera shops and the like the optical quality of these commercially produced telescopes is almost uniformly excellent Although one product may be slightly better for some types of observation or more suited to the personal circumstances of the observer than another most of them will provide excellent observing opportunities The same general praise cannot be applied however to the mountings with which many of these telescopes are provided and those problems are covered in Chapter 6 **Observing and Measuring Visual Double Stars** Robert W. Argyle, 2004-01-09 From the reviews I recommend it to anyone with an interest in binary stars who wants to learn more about these fascinating objects Jocelyn Tomkin The Observatory April 2005 Observing the Caldwell Objects David Ratledge, 2012-12-06 Background A new collection of deep sky targets for the modern amateur astronomer was long overdue The traditional catalogue of deep sky objects i.e. that produced by Messier over 200 years ago has become a victim of its own success Those objects have now become far too well known over viewed over imaged and over published More importantly they have often resulted in more interesting objects being totally overlooked The logic behind the compilation of Messier's objects was nothing more profound than that they might be confused for a comet There must be a better way to choose the best deep sky

objects for the modern era It was time for a fresh approach Enter Patrick Moore As an active observer for over half a century and the last 40 years of which as presenter of BBC TV's Sky at Night he has travelled all over the World and never missed the opportunity to observe the skies This has given him an in depth practical knowledge of deep sky objects in both northern and southern hemispheres

*Observing and Measuring Visual Double Stars* R. W. Argyle, 2012-09-06 The second edition of *Observing and Measuring Visual Double Stars* 2004 is the definitive book for those who are serious about this fascinating aspect of astronomy It deals with equipment you can start modestly with commercial or even home made instruments observing methods using binoculars upwards to advanced instrumentation and techniques including speckle interferometry The astronomy of double stars including orbital calculation is given its own section This second edition of this popular book contains a significant amount of completely new material inspired by the work done by observers particularly in the USA since the first edition was published This includes the use of the Internet to carry out astrometry precise astronomical measurement using existing survey plates and films The new edition contains an excellent guide to sketching double stars a topic not previously covered In addition there is information about how to image double stars of unequal brightness always a difficult matter but now somewhat easier because of advances in hardware and image processing software Nearly all of the chapters and tables have been updated The CD ROM that accompanied the first edition of *Observing and Measuring Visual Double Stars* is replaced by access to the Springer Extras web site The extra information includes the complete Washington Double Star and Tycho 2 Catalogs There is an extensive database of astrometric double and multiple star formation including positions orbits separations and magnitudes and a software suite that implements many of the calculations and equations featured in the book

*Astronomical Applications of Astrometry* M. A. C. Perryman, 2009 The Hipparcos satellite developed and launched by the European Space Agency ESA in 1989 was the first space mission dedicated to astrometry the accurate measurement of positions distances and proper motions of stars Amongst the key achievements of its measurements are refining the cosmic distance scale characterizing the large scale kinematic motions in the Solar neighborhood providing precise luminosities for stellar modelling and confirming Einstein's prediction of the effect of gravity on starlight This authoritative account of the Hipparcos contributions over the last decade is an outstanding reference for astronomers astrophysicists and cosmologists It reviews the applications of the data in different areas describing the subject and the state of the art before Hipparcos and summarizing all major contributions to the topic made by Hipparcos It contains a detailed overview of the Hipparcos and Tycho Catalogues their annexes and their updates Each chapter ends with comprehensive references to relevant literature

*Galaxies in Turmoil* C. R. Kitchin, 2007-11-27 Astronomers Universe Series is a new series aimed at the same people as the Practical Astronomy Series in general active amateur astronomers However it is also appropriate to a wider audience of astronomically informed readers The aim of this book is to provide an up to date account of active galaxies that is appropriate to the background knowledge of amateur astronomers but might also be picked up and

read for interest by any reader with a scientific bent Active galaxies including Quasars QSOs Radio galaxies BL Lacs Blazars LINERS ULIRGS Seyfert galaxies Starburst galaxies N galaxies etc are a major field of current astronomical research Up to a fifth of all research astronomers are working on active galaxies Huge amounts of time on major telescopes are devoted to their study In almost all cases the galaxies are thought to be powered by 100 million solar mass black holes at their centres Some of the objects are bright enough to be seen in small telescopes and an amateur astronomer with a 20 cm telescope and a CCD detector could obtain images of many more Lists of such objects and their visual and imaged appearance in commercially available telescopes are an important component of this book This detailed but accessible work will be the only coherent and complete source of information for non technical readers on an area of astronomy that fascinates many people and whose spectacular images from the Hubble space telescope Gemini VLT and other major telescopes frequently make the pages of the quality newspapers and occasionally appear on TV It also has the potential to be chosen as a set text or background reading for university courses on the subject although the writing style is such that it will appeal to all readers

Star Clusters and How to Observe Them Mark Allison, 2006-04-04 Astronomy enthusiasts will all appreciate the detailed yet easily assimilated description of star clusters how they were formed as our Milky Way galaxy how they evolved and how they are classified The latest research has revealed a vast amount of fascinating information about the clusters along with some spectacular photographs Modern commercially made telescopes enable amateur astronomers to see a surprising amount of detail and to record using CCD cameras video webcams or even film some remarkably beautiful and detailed images Contained here also is detailed information on using refractors reflectors and of course Meade and Celestron s ubiquitous range of computer controlled SCT telescopes

**Hartung's Astronomical Objects For Southern Telescopes** David Frew, David Malin, 2016-09-09 Many of the most spectacular and interesting astronomical objects are found in the magnificent southern skies Professor E J Hartung first produced a

comprehensive and highly respected guide for southern observers in 1968 The book was thoroughly revised expanded in 1995 enhancing its essential character as an indispensable source of information for the active observer of the night sky Nearly 200 objects are illustrated in black and white and much new background material has been included about the constellations and celestial coordinate systems as well as a more modern description of the stars nebulae and galaxies New tables include a southern Messier list of objects The authors passion for their subject makes this a unique and inspirational book

**Atoms, Stars, and Nebulae** Lawrence H. Aller, 1991-08-30 A semi popular account of stars and gaseous nebulae treating topics such as stellar evolution the origin of elements supernovae and cosmic rays
